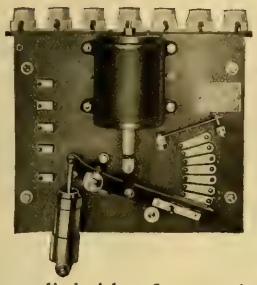
C. & H. Self Starters



These self starters are used for starting a motor from a distance, either by automatic devices or manually.

For pump work they can be actuated either by a float switch or pressure regulator. For elevator work they are supplied either for reversing or non-reversing motors as desired.

Write for our self starter bulletins for description and prices.

THE
Cutler-Hammer Mfg. Co.
Milwaukee
New York Boston Chicago Pittsburg

Security, Convenience, Safety and Economy

SECURITY POLE SEATS are cheap notwithstanding the special machinery used in their construction or the quality of material.

Made of angle iron—bent corners.

Iron cross bars machine riveted.

No rough edges to tear hands or clothing.

Weighs only 28 pounds and will carry a ton.

You will be pleased upon investigation.

Novelty Pot Heads and Sleeves

Made of selected brass.

No expert plumber needed to fit head or sleeve.

Always ready for inspection or removal.

Waterproof after inspection same as before.

Samples sent on trial.

Complete information and blanks for ordering upon request.

Water-Wheel Alternating Current Generators

BUILT IN ALL CAPACITIES

NATIONAL ELECTRIC COMPANY
MILWAUKEE, - - - - - - U. S. A.

"Elevators and similar disturbing elements,"

do not hinder the economical maintenance of normal voltage in private plants equipped with Gould Storage Batteries.

As a pressure-regulator, as a load-equalizer and as a fluctuation-absorber no piece of station equipment compares—mechanically, electrically and financially—with the Gould Storage Battery.

The subject is well worth your study.

Send for bulletins of notable installations.

A FEW POINTERS

THE COST OF MAKING THINGS

depends upon how you make them quite as much as upon what they are made of.
The final step in cost reduction is automatic machinery.
Our business is designing and building automatic machinery for manufacturers—especially for making and assembling numerous small parts; for example, we can make a machine for automatically turning out 50,000 switches per day. Can't we serve you? Send us a sample of what you make and we'll talk figures. No risk to you.

Iron Clad Service Switch

This device was designed for use in locations exposed to dampness, corrosive fumes, or mechanical injury.

The case is of cast-iron, having a closely fitting door with spring latch, which can be sealed or pad-locked.

In the box is mounted a 25-ampere combined switch and cut-out on a porcelain base. The three following styles are now furnished:

Cat. No.		Price
1210	110-v. 2-wire	$3.12
1212	250-v. 2 "	3.75
1214	250-v. 3 "	4.50

WANTED

Electrical supply salesmen. One for the State of Indiana and one for Mississippi and Louisiana. Must have previous sales experience. Address Box 695, care of Western Electrician, 510 Marquette Building, Chicago, Ill.

WANTED

By a large telephone factory in Chicago, young men not over 22 years of age, preferably graduates of high schools or technical schools to enter an apprenticeship course and be trained to install and operate modern central office equipment. Address, stating age, education, and experience, Box 594, care of Western Electrician, Chicago.

WANTED

A thoroughly capable man to take charge of fixture department and supply store and to solicit city business. Do not apply without references. State salary and experience. Address S. A. HARVEY, 610 Commercial Place, New Orleans, La.

WANTED

Electrical supply salesman to buy an interest in our Mica mines and Monazite brokerage business. Mines produced best electrical globe mica in sizes 30x30 inches. We are prepared to furnish high-grade Monazite in any desired quantity to lamp manufacturers and chemical concerns. Interested parties to sell these products to the trade. For particulars write to NORTH CAROLINA MICA & MONAZITE COMPANY, Lawndale, N. C. R. F. D., No. 2.

WANTED SALESMAN

First-class salesman to sell new patent Rock Island dry batteries on commission basis. Must have first-class references. Apply at once. Rock Island Battery Co., 3rd and Vine Sts., Cincinnati, Ohio.

FOR SALE

The entire plant and equipment of the Carroll Light, Heat and Power Co. has been ordered sold. The plant furnishes hot water heat and electric light, heat and power. For further information address J. L. ROBB, Receiver, Carroll, Iowa.

UNITED STATES ENGINEER OFFICE, WASHINGTON BARRACKS, D. C. Sealed proposals will be received here until noon, May 1, 1906, and then publicly opened, for furnishing and installing one electric elevator; for furnishing and installing lighting fixtures; for furnishing materials and labor for Terrazzo floors; furnishing labor for brick and stone slab flooring; furnishing material for timber floor, all for building for Army War College. Information on application. JOHN STEPHEN SEWELL, Captain Engineers.

DEPARTMENT OF THE INTERIOR, WASHINGTON, D. C., March 29, 1906. Sealed proposals will be received at the office of the Reclamation Service, 876 Federal Building, Chicago, Illinois, until 2 o'clock, p. m., May 28, 1906, for furnishing and installing near Garden City, Kan., complete, ready for operation, an electric power plant of 450-kilowatt switchboard output, for pumping purposes, including boilers, engines, generators, switchboards, and whatever may be necessary to make a complete plant, using for prime movers either steam turbines, or reciprocating steam engines, or gas engines. Particulars may be obtained by application to the Chief Engineer of the Reclamation Service, Washington, D. C., to O. H. Ensign, Electrical Engineer, 321 Merchants Trust Building, Los Angeles, Cal., or to the Engineer, Garden City, Kansas. THOS. RYAN, Acting Secretary.

SLOW SPEED MOTOR AT LOW COST

NORTHERN Back-geared Motors were designed for the operation of certain types of machines requiring slow speed motors. We have since made this type of motor a standard product because of the increased demand for a motor with mechanical speed reduction brought about by the cost of motors with low armature speed.

One of the principal features of Northern Back-geared Motors is the way in which the back-gears are attached. This is done by casting the motor bonnet and back-gear bearing in one piece thus securing a perfect alignment of bearings.

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** Paper .50.

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given, to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

When a man's electrical ideas flow freely; when he discusses electrical subjects intelligently and glibly, you will be pretty safe in assuming that he keeps in touch with electrical progress by perusing the Western Electrician 52 times a year.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER
Preface
I The Electric Current
II The Electric Battery
III The Effects of Electric Flow in the Circuit—Heat and Chemical Action

Why Dealers Should Handle The Edison Primary Battery

Dealers should handle the Edison Primary Battery in order to please and hold their customers.

It costs only one-quarter to one-half as much, for instance, to spark a gas or gasoline engine with an Edison cell as with other cells. This pleases the customer.

An Edison cell stands up to its work throughout its life. There is no drop in voltage, fagging or tiring out until the elements are entirely exhausted. Then an Edison Renewal makes it as good as new. This holds the customer.

There is no depreciation and waste from standing with an Edison cell. It is exactly "as represented" and delivers the full ampere hours guaranteed. The customer is never disgusted by failure to get a proper current from comparatively new cells.

There are no "bad" cells among Edison cells. Neither the dealer nor the customer is annoyed by the returning of defective cells.

There are no fumes from Edison cells; there is no creeping of salts; the fluid does not corrode iron fittings; the Edison cell can be recharged without soiling the hands. This is appreciated by the customer.

The Edison Primary Battery is the cheapest form of battery energy. It is the best battery for gas engine ignition, telephone work, large annunciators, burglar alarms, physicians X-ray and cautery outfits, railway and mine signals, the operation of slot machines and small fan motors, etc.

The Battery Question is fully discussed in our recently issued literature. Ask for BOOK "W. E." and prices.

The **Hartford** is the only company which makes a specialty of, and does exclusively, a steam boiler inspection and insurance business.

The **Hartford** is the only company whose entire talent and energies are applied to the study of steam, to the scientific construction and installation of boilers, and to their periodical inspection by expert mechanics.

The **Hartford** is the only company whose entire assets and resources are held exclusively for the protection of steam users, and the payment of losses occasioned by the explosion of steam boilers, and for no other hazard whatsoever.

The **Hartford** is now doing nearly nine-tenths of the inspection and insurance of Steam Boilers in the New England States, and nearly two-thirds of the entire amount done throughout the United States.

OTTO ENGINES

Uncle Sam Satisfied

OTTO OTTO

The following is clipped from the "Washington Post" of March 8, '06:

"The submarine torpedo boats Porpoise and Shark completed most satisfactory gasoline engine endurance tests in Narragansett Bay last week, running for six days and proving their ability to run over 500 miles in case their electric engines became disabled."

The above-named torpedo boats and 25 others in the navies of the U. S., England, Japan and Russia are equipped with "Otto" marine engines 200 H. P. each.

Surely a powerful endorsement of "Otto" quality.

AKRON, OHIO;
OAKLAND, CALIFORNIA;
TACOMA AND
BELLINGHAM, WASHINGTON,

Have all gone automatic—Akron for 3,000 lines, Oakland for 5,000, Tacoma for 4,000 and Bellingham for 1,000.

Merit, absolute merit, was the reason why Automatic Telephone Equipment was selected by the Independent Companies in these cities.

They wanted the best, the very best, in telephone equipment.

They took their time and looked hard for it everywhere.

They found it in the Automatic.

That's where you will find it when you are ready to see it.

That's where the Independent Companies in all these cities found it—they adopted the Automatic:—

ELECTRICIANS' HANDY-BOOK

OF USEFUL INFORMATION.

Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.

Compiled by E. T. BUBIER, 2d.

ILLUSTRATED.

A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART
1. History.
2. Theory.
3. Measurements. (Electric and Magnetic.)
4. Electric Batteries.
5. Electro-Chemistry and Metallurgy.
6. The Telegraph and Telephone.
7. Dynamos and Motors.
8. Management of Dynamos and Motors.
9. Electric Lighting.
10. Transformers.
11. Wiring for Electric Power.
12. Wiring for Bell Fitting and Gas Lighting
13. Electric Railways.
14. Miscellaneous.
15. Useful Tables.
16. Logarithms.

Contains over four hundred and fifty pages and many illustrations.

PRICE, CLOTH, ONLY $2.50; POSTPAID.

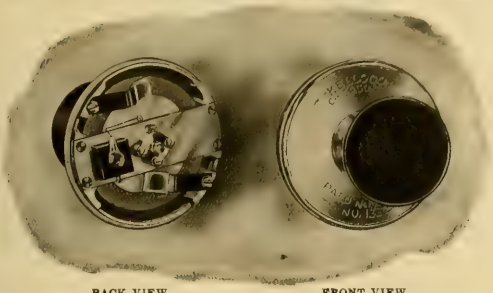
THE KELLOGG
REVERSE TYPE "SOLID BACK"
TRANSMITTER
HAS STOOD THE TEST OF TIME

It was in service five years ago.
It has been in service ever since.
It will be in service forever without change.

A Kellogg Transmitter once installed never needs to be replaced.



BACK VIEW. FRONT VIEW.

Every telephone company has come to know that the Transmitter is the most vital part of the entire system.

If a Transmitter "falls down" and has to be exchanged, it is not the financial loss that counts, but it is the dissatisfaction of the subscribers that hurts the telephone company, and this dissatisfaction of the subscribers cannot be expressed in dollars and cents.

Send for Catalog. Correspondence Solicited.

THE TELEPHONE HAND-BOOK
NEW AND REVISED EDITION, WITH A NEW CHAPTER ON "RECENT PROGRESS," BRINGING THE BOOK UP TO DATE.

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

160 Pages, 133 Illustrations, Cloth, Hand-Book Size, Price $1.00.

Extract from Preface.—"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
42. Recent Progress. Appendix.

ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. Fully Illustrated. PRICE, $1.00

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar.

CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity.

CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Curr nt.

CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory.

CHAPTER VI. Electr magnetic Induction and Action of Currents Upon Each Other; The Induction Coil and Its Application.

CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries.

CHAPTER VIII. Dynamos; Motors; Transmission of Power.

CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.

Sixteenth Edition. Just Published.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law. CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mils. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy. CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. 393 Illustrations. PRICE, $3.00

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. Just Published.

ELECTRIC TOY MAKING

DYNAMO BUILDING and ELECTRIC MOTOR CONSTRUCTION

By PROF. T. O'CONOR SLOANE

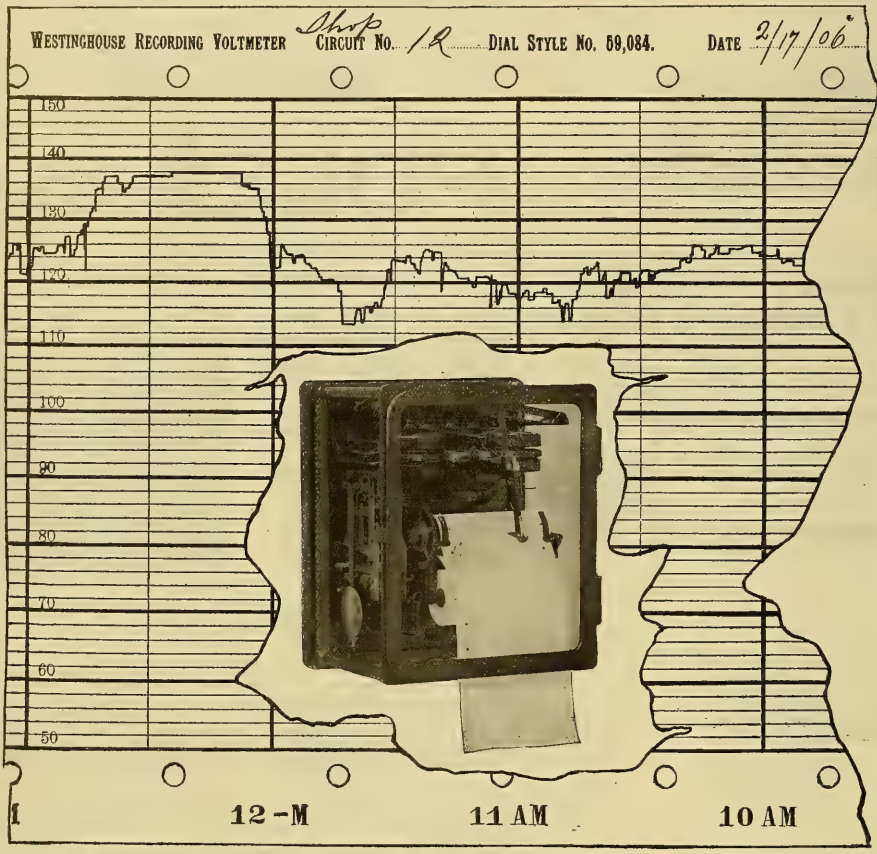
With Self-Winding Clocks



Ammeters
Voltmeters
Wattmeters
Power Factor Meters
Frequency Meters

The record is made by a specially designed reservoir pen, holding over a month's supply of ink. The pen moves horizontally across the registering paper, its motion being proportional to the quantity to be measured. The quickness of the pen's motion, consequently its sensitiveness, is easily regulated. One roll of paper is sufficient for 60 days record.

The meters are furnished for either alternating or direct current circuits.

In preparation for moving into larger quarters in the new part of the Marquette Building, which removal will take place April 10th next, we are going through our storage vaults assorting everything therein with a view to carrying into the new place only such things as cannot possibly be dispensed with. In connection with this work we are able to offer for sale cheap a few bound volumes of the WESTERN ELECTRICIAN. These volumes are new and have never been used, and this is an opportunity to obtain a bargain which, for the years they cover, we shall never be able to offer again.

Write us and let us know your needs and we will quote you at once.

WESTERN ELECTRICIAN.

P. S. Kindly take notice that our new suite of rooms will be known as 507 Marquette Building. Our street number, 204 Dearborn Street, and our telephone number, Main 1746, will not change.

Iron Clad Service Switch

This device was designed for use in locations exposed to dampness, corrosive fumes, or mechanical injury.

The case is of cast-iron, having a closely fitting door with spring latch, which can be sealed or pad-locked.

In the box is mounted a 25-ampere combined switch and cut-out on a porcelain base. The three following styles are now furnished:

Cat. No.		Price
1210	110-v. 2-wire	$3.12
1212	250-v. 2 "	3.75
1214	250-v. 3 "	4.50

Discount 50 per cent

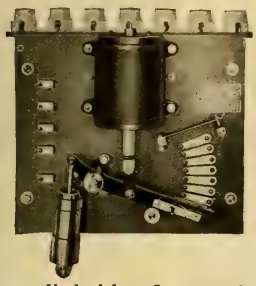
Self Starters



These self starters are used for starting a motor from a distance, either by automatic devices or manually.

For pump work they can be actuated either by a float switch or pressure regulator. For elevator work they are supplied either for reversing or non-reversing motors as desired.

Write for our self starter bulletins for description and prices.

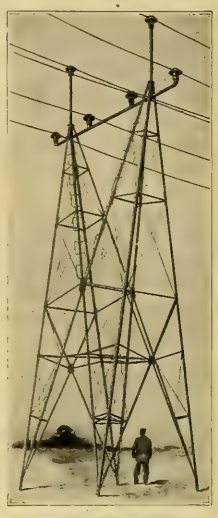
GALVANIZED STEEL
ELECTRIC TRANSMISSION TOWERS

FOR SINGLE, DOUBLE OR TRIPLE CIRCUITS

Aermotor Towers are HEAVILY GALVANIZED after all punching, shearing and machine work is finished. They will withstand corrosion in any climate without expense for maintenance.

THREE-PHASE SINGLE CIRCUIT TOWERS

The view at the left shows the double line of towers designed and built by the Aermotor Company, and erected for one of the power companies at Niagara Falls. These towers are 50 feet high and weigh about 3000 lbs. each. They are guaranteed to withstand a pull of 3500 lbs. at the top of any insulator pin, or a total pull at the top of the tower of 15,000 pounds. They are the most substantial towers yet built for transmission purposes. The price of these towers is very moderate, and the cost of anchorage is greatly reduced by the use of a wide trussed base.



THREE-PHASE DOUBLE CIRCUIT TOWERS

The cut at the right shows the style of tower which the Aermotor Company is now furnishing for a double circuit line which is building in the state of New York. These towers are guaranteed to withstand a strain of 2000 lbs. on any insulator pin, or a total strain of 8000 lbs. in either direction. By the ingenious arrangement of the twin towers these strains are easily met with great economy of material.

The illustrations show only two of the various styles of towers which the Aermotor Company has designed and built. They are prepared to furnish the most economical towers to meet every requirement.

AERMOTOR COMPANY, CHICAGO

Stanley - G. I.

The Stanley-G. I. Electric Mfg. Co. is a consolidation of the Stanley Electric Mfg. Company of Pittsfield and the General Incandescent Arc Light Company of New York. The Stanley Company's product, marketed under the well-known trade name of the S. K. C. System, comprises Generators, Transformers, Rotary Converters, Motor Generator Sets, Switchboard Apparatus, Induction Motors, etc. The General Incandescent Arc Light Company has been favorably known as builder of the high-grade G. I. Arc Lamps, Arc Lamp Regulators, Incandescent Lamps, alternating current and direct current Motors, General and Special Electrical Supplies.

General Electric Company

Electric Flat-irons

Six-pound Flat-iron for general use. Aluminum, bronze or nickel finish.

An Increased Income

In placing the General Electric Company's electric flat-iron on trial with a customer, a central station is assured of an increased income, because this iron is retained for long continued service.

Under the hardest work the iron remains hot, because the heat flows rapidly to the work and not into the air. The heating unit is simple and durable.

A Practical Flat-iron

Is always in demand. The convenience and cleanliness of the electric iron appeal at once to the common sense, but the continued efficient operation of the General Electric iron distinguishes it with the observant user.

In every way the General Electric flat-iron best fulfills the needs in practical laundry work.

NORTHERN LIGHTING OUTFITS

Embody a Northern Dynamo and any type of steam, gas, kerosene or gasoline engine specified by the purchaser. If desired, we select an engine best suited to the requirements. Northern Dynamos are so designed that they can be readily connected to most any motor or engine. They are so simple that anyone can operate them, thus making them very desirable for operation in isolated parts.

Booklet No. 2540-A shows numerous applications of Northern Dynamos to various types of engines.

PRICE, POSTAGE PREPAID, 75c.

This is a very handsome book of 60 pages, printed on fine heavy paper, with neat cloth binding. It contains PORTRAITS and BIOGRAPHIES of Ohm, Watt, Faraday, Joule, Gauss, Weber, Sir William Siemens, Dr. Werner von Siemens, Volta, Ampere, Daniell, von Jacobi, together with a carefully prepared table of the Practical Electrical Units, with their relative values.

In no other Single Volume can this Rare Collection of Portraits be Found.

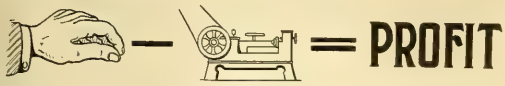
WE WILL BUILD YOU A MACHINE TO DO IT



We don't ask you what "it" is, but whatever you make that necessitates the forming and assembling of small parts can be handled entirely by machinery, and we'll furnish the machine. We will design a machine for making *any* electrical specialty and do it for you on the "No Risk to You Basis." Send us a sample of what you make, and we will send you a proposition as to what we can make. You don't pay for the machine until it suits you. Here is a chance to kill competition.

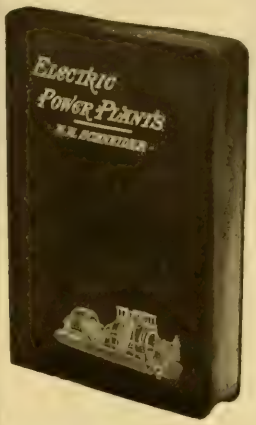
A BOOK YOU SHOULD HAVE

Electric Power Plants



BY NORMAN H. SCHNEIDER.

A book every steam and electrical engineer should have because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length. There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

290 PAGES, 203 ILLUSTRATIONS.

Full Limp Leather, Round Corners, Gilt Edges, $2.50. Cloth, $1.50.

SPON & CHAMBERLAIN

FOUR NEW BOOKS

Price 25 Cents Each

By NORMAN H. SCHNEIDER

THE STUDY OF ELECTRICITY
FOR BEGINNERS
Comprising the Elements of Electricity and Magnetism as Applied to Dynamos, Motors, Wiring and to all Branches of Electrical Work.
With Fifty-Four Original Illustrations and Six Tables

DRY BATTERIES
Especially Adapted for
Automobile, Launch and Gas Engine Work; Medical Coils, Bells, Annunciators, Burglar Alarms, Telephones, Electrical Experiments and all purposes requiring a Good Battery.
With Thirty Original Illustrations

ELECTRICAL CIRCUITS AND DIAGRAMS
ILLUSTRATED AND EXPLAINED
New and Original Drawings, comprising Alarms, Annunciators, Automobiles, Bells, Dynamos, Gas Lighting, Motors, Storage Batteries, Street Railways, Telephone, Telegraph, Wireless Telegraphy, Wiring and Testing.

HOW TO INSTALL
ELECTRIC BELLS, ANNUNCIATORS AND ALARMS
Including Batteries, Wires and Wiring, Circuits, Pushes, Bells, Burglar Alarms, High and Low Water Alarms, Fire Alarms, Thermostats, Annunciators, and the Location and Remedying of Troubles.

WESTERN ELECTRICIAN

NEW DYNAMO TENDERS' HAND-BOOK

BY F. B. BADT

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 13,000 of the new.

ELECTRICIAN PUBLISHING CO., 507 Marquette Bldg., Chicago

Just Published

Electric Wiring Diagrams and Switchboards

By NEWTON HARRISON, E. E., Instructor of Electrical Engineering in the Newark Technical School.

A brand new work covering the subject of electric wiring in all its branches by an acknowledged authority. This is a book which will instruct you in the art of wiring. It will teach you how to lay out a wiring job. It will show you how to make estimates. It will supply the science, and method and guarantee the result. It is like a practical electrical contractor, giving you just the advice you need. It is neither too simple nor too complex, but JUST RIGHT.

The subject of direct and alternating current wiring is treated with explanations of the power factor, and simple ways of obtaining the sizes for single phase, two phase and three phase circuits are given. The book is free from advanced technicalities and mathematics, arithmatic being used throughout. It is, in every respect, a handy, well written, instructive, comprehensive volume on wiring for the wireman, foreman, contractor or electrician. Contains 270 pages, fully illustrated. PRICE, $1.50.

— FOR SALE BY —

ELECTRICIAN PUBLISHING CO., 507 MARQUETTE BUILDING CHICAGO

When a man's electrical ideas flow freely; when he discusses electrical subjects intelligently and glibly, you will be pretty safe in assuming that he keeps in touch with electrical progress by perusing the Western Electrician 52 times a year.

AKRON, OHIO; OAKLAND, CALIFORNIA; TACOMA AND BELLINGHAM, WASHINGTON,

Have all gone automatic—Akron for 3,000 lines, Oakland for 5,000, Tacoma for 4,000 and Bellingham for 1,000.

Merit, absolute merit, was the reason why Automatic Telephone Equipment was selected by the Independent Companies in these cities.

They wanted the best, the very best, in telephone equipment.

They took their time and looked hard for it everywhere.

They found it in the Automatic.

That's where you will find it when you are ready to see it.

That's where the Independent Companies in all these cities found it—they adopted the Automatic:—

In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only. Write us for delivered prices.

Note The Porous Construction

Of the core of the discharge block of Westinghouse M. P. Lightning Arresters. This construction allows the free and uniform distribution of static discharges, characteristic of these arresters.

In the March 31st issue we showed the complete discharge block, in the April 28th issue we will say a few words as to the tests the arresters undergo.

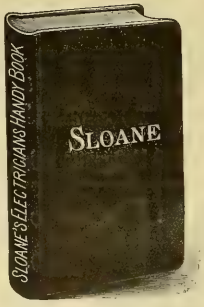
ELECTRICIAN'S HANDY BOOK

By Prof. T. O'CONOR SLOANE



Pocket Book Size. Handsomely Bound in Leather with Title and Edges in Gold. About 800 Pages. 500 Illustrations.

PRICE $3.50

THE latest, best and most complete book on Electricity, covering the subject of Practical Electricity in all its branches written by a well-known author in a manner that can be readily understood, and intended for the every day working electrician.

PARTIAL LIST OF CHAPTERS

Mechanics as Applicable to Practical Electricity—Electric Currents—Ohm's Law and Electric Energy—Alternating Currents—Direct-Current Dynamos—Care and Running of Dynamos—Direct-Current Motors—Alternating-Current Generators—Alternating-Current Transformers—Alternating-Current Motors—Distribution of Electric Currents—Arc Lamps—Incandescent Lamps—Electric Railways—Primary Batteries—Secondary Batteries—Central Station—Switchboards—Electric Heating and Cooking—Lightning Rods—Roentgen or X-Ray Work—Electric Elevators—Electro-Metallurgy and Electro-Chemistry—Electric Measurements, and Instruments used in Station Work—Miscellaneous Data, Formulas and Suggestions, etc., etc.

EVERY PROGRESSIVE ELECTRICIAN WHO WISHES TO KEEP UP WITH THE TIMES SHOULD HAVE THIS VALUABLE WORK

In preparation for moving into larger quarters in the new part of the Marquette Building, which removal will take place April 21st next, we are going through our storage vaults assorting everything therein with a view to carrying into the new place only such things as cannot possibly be dispensed with. In connection with this work we are able to offer for sale cheap a few bound volumes of the WESTERN ELECTRICIAN. These volumes are new and have never been used, and this is an opportunity to obtain a bargain which, for the years they cover, we shall never be able to offer again.

Write us and let us know your needs and we will quote you at once.

WESTERN ELECTRICIAN.

P. S. Kindly take notice that our new suite of rooms will be known as 507 Marquette Building. Our street number, 204 Dearborn Street, and our telephone number, Main 1746, will not change.

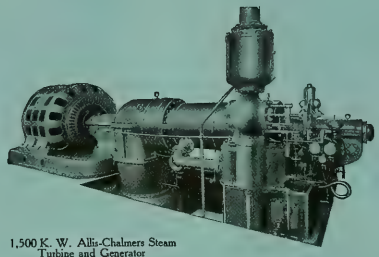
ALLIS-CHALMERS CO
MILWAUKEE WIS U S A

Builders of

Steam Turbines and Generators
In Capacities From 500 to 10,000 K. W.

Our Turbine is of the Horizontal, Multiple-Expansion, Parallel Full Annular Flow type, generally known as the "Parsons" type. It combines the best features of all the highest grade turbines, with many important improvements of our own. The rights under all patents granted to or acquired by Hon. Charles A. Parsons and his associates since Sept. 11th, 1900, as well as in the future, including rights to all Parsons Marine Turbines and Turbo-Compressors, have been secured by us.

In addition, we have acquired exclusive rights to certain basic patents covering the Fullager-Sankey method of fastening turbine blading at its roots, and for supporting, spacing and tightening the blades at the outer end, which overcomes all danger of stripping, insures accurate spacing, prevents distortion of blades, and reduces clearance losses to a minimum, resulting in reliability and the highest economy in operation.



1,500 K. W. Allis-Chalmers Steam Turbine and Generator

Our Turbo-Generators are especially designed for high peripheral speeds, and embody the very latest designs and the highest engineering talent in electrical construction, maintaining the high standard of all-around excellence for which our apparatus is distinctive.

We have been engaged for two years past in the development of Steam Turbines and Generators, and in the perfecting and installing of special machinery for their manufacture. No effort has been spared to provide for turning out units of the highest possible efficiency.

WE WILL, UNDER CONTRACT, PROTECT TO THE FULLEST EXTENT, ALL OF OUR CUSTOMERS AGAINST ANY SUITS THAT MAY BE INSTITUTED FOR ALLEGED INFRINGEMENT OF PATENT RIGHTS CLAIMED BY OTHERS.

HUGO REISINGER 11 BROADWAY NEW YORK

Iron Clad Service Switch

This device was designed for use in locations exposed to dampness, corrosive fumes, or mechanical injury.

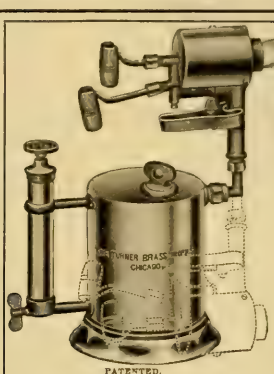
The case is of cast-iron, having a closely fitting door with spring latch, which can be sealed or pad-locked.

In the box is mounted a 25-ampere combined switch and cut-out on a porcelain base. The three following styles are now furnished:

Cat. No.		Price
1210	110-v. 2-wire	$3.12
1212	250-v. 2 "	3.75
1214	250-v. 3 "	4.50

Discount 50 per cent
Special prices in quantities

The Trumbull Electric Mfg. Co.
606 Woodford Ave., Plainville, Conn



PATENTED.
No. 96 Double Jet Torch. $5.00 Each.

WIND PROOF BRAZING TORCH

The Turner Double Jet Torch No. 96 produces the highest heat that is obtainable from gasoline. It is constructed especially for Electricians' use and can be used for either inside or outdoor work. The strongest wind has no effect on it, and as a Lineman's tool and for brazing in the wind it is unexcelled.

Manufactured by
The TURNER BRASS WORKS

Mr. Switchboard Builder:

Our Bulletin No. 67-H gives data for switchboard builders.

We have saved money for many progressive and up-to-date switchboard builders by properly selecting their instruments, and by properly combining them with transformers.

We do not build switchboards, but have an expert at your disposal to answer any questions on switchboard practice.

INNER-GLOBE WISDOM

This is the dealer silent and sad,
Who restlessly slumbers when not cross and mad;
For customers are few and business is bad,
And his bank roll grows thinner and thinner.
The reason isn't hard to find,
His Inner-Globe customers knew their mind;
He tried to sell them some other kind,
But they wanted the "PHŒNIX INNER."

Let's pass the poor dealer and his globes untrue,
And his empty store and his feelings blue,
To the wide-awake "PHŒNIX" dealer, who
Has a disposition always sunny.
He's selling the boys the "PHŒNIX" brand,
The best Inner-Globe in all the land.
He's doing business to "beat the band"
And simply "coining money."

New York

Copyright, 1905 by The J. L. Mott Iron Works. Copyright, 1906 by The J. L. Mott Iron Works

¶ "Two Balls' Adjusters keep the temperature down by giving you more light with fewer lamps."

There is a hot-weather argument for the man who is talking about waiting until next fall before putting in "Two Balls" Adjusters—and for the man who is thinking about waiting until next fall before pushing them.

"TWO BALLS"

Adjusters are an all-the-year-'round necessity on drop lights in stores, offices, shops and homes; and they are an all-the-year-'round profit-bringer to the dealers who handle them.

The "Two Balls" is the pioneer lamp-cord Adjuster, and the best on the market to-day. It has no springs, drums or dangling loops, and is absolutely automatic and reliable.

It sells on sight—and electric light users see it in your store because we furnish you with illustrated circulars to send to them. Write us for full information concerning the various ways we help you to get good money out of the "Two Balls" Adjuster business.

We also send free to those interested, literature descriptive of our line of Telephone Equipment for Interior, Rural, Toll, Town and City use

Address Box 597, care Western Electrician, 510 Marquette Building, Chicago.

POSITION WANTED

By a young man 29 years of age, on high or low potential work; high potential preferred. Or as assistant in some power house. Have a first-class technical education without experience. Strictly sober and industrious. S. P. DAUGHERTY, R. F. D. No. 3, Edwardsburg, Mich.

W ANTED

By a large telephone factory in Chicago, young men not over 22 years of age, preferably graduates of high schools or technical schools to enter an apprenticeship course and be trained to install and operate modern central office equipment. Address, stating age, education, and experience, Box 594, care of Western Electrician, Chicago.

WANTED.

A well-known Eastern concern, manufacturing dynamos and motors, would like to make arrangements with a salesman well acquainted with the electrical trade in Pittsburg, to handle their apparatus. A very satisfactory proposition will be made to the right man. Address Box 598, care of Western Electrician, 510 Marquette Bldg, Chicago.

WANTED

To purchase two 150 or 175 K-W. 60 cycle, 2 or 3 phase 2200 volts, alternating current generators; revolving field type; direct connected to Corliss engines; operating at a speed not to exceed 110 r. p. m. These outfits must be in first-class condition. In answering, state make of generator and engine, speed, length of time in operation, serial or shop number of the generator. Address reply to W. W. MOORE, care Wesco Supply Co., St. Louis, Mo.

WANTED SALESMAN

First-class salesman to sell new patent Rock Island dry batteries on commission basis. Must have first-class references. Apply at once. Rock Island Battery Co., 3rd and Vine Sts., Cincinnati, Ohio.

UNITED STATES ENGINEER OFFICE, WASHINGTON BARRACKS, D. C. Sealed proposals will be received here until noon, May 1, 1906, and then publicly opened, for furnishing and installing one electric elevator; for furnishing and installing lighting fixtures; for furnishing materials and labor for Terrazzo floors; furnishing labor for brick and stone slab flooring; furnishing material for timber floor, all for building for Army War College. Information on application. JOHN STEPHEN SEWELL, Captain Engineers.

DEPARTMENT OF THE INTERIOR, WASHINGTON, D. C., March 29, 1906. Sealed proposals will be received at the office of the Reclamation Service, 876 Federal Building, Chicago, Illinois, until 2 o'clock, p. m., May 23, 1906, for furnishing and installing near Garden City, Kan., complete, ready for operation, an electric power plant of 450-kilowatt switchboard output, for pumping purposes, including boilers, engines, generators, switchboards, and whatever may be necessary to make a complete plant, using for prime movers either steam turbines, or reciprocating steam engines, or gas engines. Particulars may be obtained by application to the Chief Engineer of the Reclamation Service, Washington, D. C., to O. H. Ensign, Electrical Engineer, 321 Merchants Trust Building, Los Angeles, Cal., or to the Engineer, Garden City, Kansas. THOS. RYAN, Acting Secretary.

When a man's electrical business shows a steady and healthy growth; when he sees only the bright side of things and never endeavors to discover a possible dark side; when he says business conditions are improving, you will be pretty safe in assuming that he advertises in the Western Electrician 52 times a year.

NOTICE!

Notice is hereby given that specifications have been adopted by the City of Fond du Lac, by its Mayor and Common Council, for the granting of a franchise to construct, maintain and operate a plant or plants within or without the City of Fond du Lac, for the purpose of furnishing, and to furnish to the City of Fond du Lac and its citizens and others in said State electricity for light, heat and power, and to that end set poles and string wires and construct and maintain the necessary appurtenances to said business in said City of of Fond du Lac, which said specifications are now on file in the office of the City Clerk of said City of Fond du Lac, to which reference is hereby made

Now therefore, notice is hereby given that bids will be received for the sale of such franchise at the office of F. A. Bartlett, City Clerk of the City of Fond du Lac, up to 5 o'clock p.m., on Wednesday, May 16, 1906, which such bids shall propose, on behalf of the applicant, to pay annually into the treasury of said city, in consideration of receiving such franchise, a percentage of the gross receipts from the business carried on under said franchise. Such bid must be accompanied by a certified check in the sum of ten thousand ($10,000) dollars, as a guarantee of the acceptance of the franchise if granted and the giving of the bond provided for in said specifications.

By order of the Common Council.
Dated Fond du Lac, Wis., April 14, 1906.

F. A. BARTLETT,
City Clerk, Fond du Lac, Wis.

Electrical book buyers buy electrical books from the Electrician Publishing Co., 510 Marquette Bldg., Chicago.

90% of the Air Hammers used are Boyer or Keller.
of the Air Drills used are Boyer, Keller or "Little Giant."

Why? Because they do more work, use less air, require less repairs, represent basic patents and are not liable to infringement.

THE SPECIAL TRAIN

TO THE

National Electric Light Association Meeting

ATLANTIC CITY, N. J.,

JUNE 5, 6, 7 AND 8, 1906.

For the exclusive use of delegates, supply men, their friends and ladies, via

Pennsylvania Short Lines.

This special train will leave Chicago 2 p. m. (Chicago time), Sunday, June 3rd, so as to reach Atlantic City in the middle of Monday afternoon. By this schedule the party from the West will reach Atlantic City in time perhaps for an ocean dip, or at any rate in ample time for supper and the evening's amusements.

It is proposed to make this train first class in every respect—in fact, equal to the "Pennsylvania Limited" in service, viz., it will be equipped with the same beautiful parlor smoker, dining car, sleepers and observation car. This N. E. L. A. train will be run east from Chicago over the Fort Wayne Route through Fort Wayne, Pittsburg, Harrisburg and Philadelphia, all rail to Atlantic City.

In view of the enthusiasm already evident relative to this coming Atlantic City convention and the fact that all berths on the train are not "lowers" (!), those in the West desiring to join the convention party and go East from Chicago to Atlantic City on this special train should without delay early make reservations DIRECT, addressing

C. L. KIMBALL, Assistant General Passenger Agent,

ROOM 22, No. 2 SHERMAN ST., CHICAGO,

Who is handling all inquiries appertaining to reservations for Assistant Master of Transportation Frank L. Perry of the National Electric Light Association.

Uncle Sam Satisfied

The following is clipped from the "Washington Post" of March 8, 1906:

"The submarine torpedo boats Porpoise and Shark completed most satisfactory gasoline engine endurance tests in Narragansett Bay last week, running for six days and proving their ability to run over 500 miles in case their electric engines became disabled.

The above named torpedo boats and 25 others in the navies of the U. S., England, Japan and Russia are equipped with "Otto" marine engines 200 H. P. each.

Surely a powerful endorsement of "Otto" quality

SAMSON TURBINE

The illustration shows the large NIAGARA design, HORIZONTAL SHAFT TURBINES recently installed by us, for the TELLURIDE POWER TRANSMISSION CO. power station, Logan, Utah. Tests conducted by competent engineers developed as follows:

HEAD.	GATEAGE.	SPEED.	H. P.	GENERATOR EFFI'CY.	TURBINE EFFI'CY.
211.5 ft.	½	400 r.p.m.	1038	95.20%	73.80%
209.7 ft.	¾	400 r.p.m.	1560	96.80%	83.89%
208.9 ft.	Full	400 r.p.m.	1677	96.70%	80.57%

These results have never been equaled by any turbine of the Horizontal Shaft Design, operating under equally HIGH HEADS. The test was made AFTER TURBINES WERE INSTALLED, direct coupled to Generators. Francis' weirs and formulæ for discharge were used. The original test reports on file at our offices. These turbines are all fitted with our SAMSON BALANCED GATES. Note especially the UNIFORM SPEED AT ALL GATEAGES.

THE JAMES LEFFEL & CO., 307 Lagonda St., SPRINGFIELD, OHIO, U. S. A.

Reduced Telephone Rates

IN CHICAGO

If the franchise of Chicago Telephone Company in the City of Chicago is extended, the following rates have been proposed for the Chicago Exchange.

AKRON, OHIO; OAKLAND, CALIFORNIA; TACOMA AND BELLINGHAM, WASHINGTON,

Have all gone automatic—Akron for 3,000 lines, Oakland for 5,000, Tacoma for 4,000 and Bellingham for 1,000.

Merit, absolute merit, was the reason why Automatic Telephone Equipment was selected by the Independent Companies in these cities.

They wanted the best, the very best, in telephone equipment.

They took their time and looked hard for it everywhere.

They found it in the Automatic.

That's where you will find it when you are ready to see it.

That's where the Independent Companies in all these cities found it—they adopted the Automatic:—

BATTERY ECONOMY

Is a question of the most energy for the money. The Edison Battery gives 2 ampere hours for one cent. Other cells cost from 2 to 10 times as much per unit of service. The voltage and resistance of the Edison cell are uniform to the last hour of its guaranteed life. Our book "W. E." is full of facts

KELLOGG PHILOSOPHY — The Best Is The Cheapest

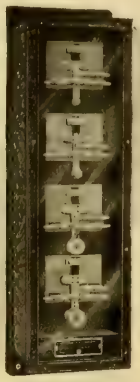
KELLOGG
Frequency Pole Changer

UTMOST SIMPLICITY OF OPERATION

The efficiency and beauty of the Selective Harmonic Ringing System of the "Kellogg Company" has been fully recognized by the entire Independent field, but the difficulty heretofore has been that the system required a generating device which involved a high first cost and a relatively large consumption of energy.

The Frequency Pole Changer was designed to meet and overcome all these objections.

It is a very simple device, each unit involving only the use of a magnetic coil and three sets of springs.



FRONT VIEW

ADVANTAGES.

1. Requires no attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from primary or storage batteries.
4. Dry cells can be used for the ringing current.
5. They can be furnished to work successfully under any load.
6. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
7. Operate successfully within the limits of 17 to 28 volts.
8. Noiseless in operation.
9. Only 3 contacts on each vibrator.

This Pole Changer can be used on either Common Battery or Magneto Exchanges.

SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only. Write us for delivered prices.

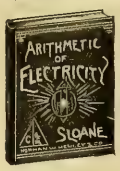
ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. Fully Illustrated. PRICE, $1.00

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar.
CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity.
CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Current.
CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory.
CHAPTER VI. Electromagnetic Induction and Action of Currents Upon Each Other; The Induction Coil and Its Application.
CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries.
CHAPTER VIII. Dynamos; Motors; Transmission of Power.
CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.



Sixteenth Edition. Just Published.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mills. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy. CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. 393 Illustrations. PRICE, $3.00

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. Just Published.

ELECTRIC TOY MAKING

DYNAMO BUILDING and ELECTRIC MOTOR CONSTRUCTION

By PROF. T. O'CONOR SLOANE

185 Pages. Very Fully Illustrated. PRICE, $1.00.

Contents

CHAPTER I. Batteries. CHAPTER II. Permanent Magnets. CHAPTER III. Electro-Magnets. CHAPTER IV. Electric Motors. CHAPTER V. Electric Bells. CHAPTER VI. Miscellaneous Toys. CHAPTER VII. Spark and Induction Coils, and Allied Subjects. CHAPTER VIII Hand-Power Dynamo. CHAPTER IX. Miscellaneous Receipts and Formulæ.

Twelfth Edition. Just Published.

How to Become a Successful ELECTRICIAN

WARNING

THE PATENTED IMPROVEMENTS which have brought the WESTINGHOUSE-PARSONS STEAM TURBINE to its present state of high efficiency are owned by The Westinghouse Machine Company.

Some of the above mentioned improvements were invented and patented by the Hon. Charles A. Parsons. His rights thereto, he has sold to The Westinghouse Machine Company.

Unlicensed Manufacturers are now making and offering for sale Steam Turbine Apparatus embodying certain of these improvements, thereby INFRINGING the patents covering them.

NOTICE IS HEREBY GIVEN

that all INFRINGERS, including users of such infringing apparatus, will be PROSECUTED FORTHWITH.

Pursuant To The Above Notice

¶ A suit was begun on February 9, 1906, by the filing of a bill of complaint against Allis-Chalmers Company.

¶ A second suit was begun on March 9, 1906, by the filing of a bill of complaint against Allis-Chalmers Company.

¶ A third suit was begun on April 11, 1906, by the filing of a bill of complaint against Allis-Chalmers Company.

In preparation for moving into larger quarters in the new part of the Marquette Building, which removal will take place April 21st next, we are going through our storage vaults assorting everything therein with a view to carrying into the new place only such things as cannot possibly be dispensed with. In connection with this work we are able to offer for sale cheap a few bound volumes of the WESTERN ELECTRICIAN. These volumes are new and have never been used, and this is an opportunity to obtain a bargain which, for the years they cover, we shall never be able to offer again.

Write us and let us know your needs and we will quote you at once.

WESTERN ELECTRICIAN.

P. S. Kindly take notice that our new suite of rooms will be known as 507 Marquette Building. Our street number, 204 Dearborn Street, and our telephone number, Main 1746, will not change.

C-W TRANSFORMERS
CHAPTER IV.

Five 400-K. V. A. Crocker-Wheeler core-type transformers ready for shipment. See Bulletin 65 WE.

The following was recently received from Ross & Holgate, the well-known consulting engineers of Montreal, Can.:

"It gives me great pleasure to say that I personally saw one of these 667-K. W., 35,000-volt Transformers subjected to a test of 60,000 volts from primary to ground. This pressure was applied to the Transformer after it was removed from the case and not immersed in oil. I consider the performance of this Transformer under the above test very satisfactory. Yours very truly,
"(Signed) Ross & Holgate—J. Norman Smith."

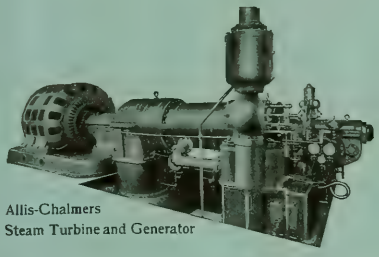
ALLIS-CHALMERS CO
MILWAUKEE WIS U S A

Notice to the Public



Allis-Chalmers
Steam Turbine and Generator

The advertisements of the Westinghouse Machine Company under the head of "WARNING NOTICE," etc., relating to patents on steam turbines and patent suits filed by it against ALLIS-CHALMERS COMPANY in regard thereto, disclose a modern invention of questionable business methods and advertising bluffs that needs but a plain statement of fact for its full exposure.

ALLIS-CHALMERS COMPANY has spared no effort or expense to place the best and most modern steam turbine on the market, and has acquired the right of manufacture to all the modern turbine inventions under the later United States Letters Patent of the Hon. C. A. Parsons, which the Westinghouse Company cannot use, because of the expiration of its contract with Mr. Parsons.

Notwithstanding the strong position occupied by ALLIS-CHALMERS COMPANY in regard to these, as well as its own turbine patents, the Westinghouse interests bring suits against ALLIS-CHALMERS COMPANY on devices which are not controlled by them, and on account of patents which THEY SHOULD KNOW the ALLIS-CHALMERS COMPANY does not infringe.

There can be but one outcome of such suits, and the ALLIS-CHALMERS COMPANY confidently asserts that this will demonstrate the correctness of its position and the supreme strength of its patents.

GUARANTEE

ALLIS-CHALMERS COMPANY HEREBY ANNOUNCES THAT IT WILL, UNDER CONTRACT, PROTECT TO THE FULLEST EXTENT ALL OF ITS CUSTOMERS AGAINST ANY SUITS THAT MAY BE INSTITUTED FOR ALLEGED INFRINGEMENT OF PATENT RIGHTS CLAIMED BY OTHERS, AND WILL AT ITS OWN EXPENSE DEFEND ANY SUCH SUITS.

Following Are Some of the Purchasers of the Allis-Chalmers Company's Steam Turbines and Generators:

C-W TRANSFORMERS

CHAPTER IV.

Five 400-K. V. A. Crocker-Wheeler core-type transformers ready for shipment. See Bulletin 65 WE.

The following was recently received from Ross & Holgate, the well-known consulting engineers of Montreal, Can.:

"It gives me great pleasure to say that I personally saw one of these 667-K. W., 35,000-volt Transformers subjected to a test of 60,000 volts from primary to ground. This pressure was applied to the Transformer after it was removed from the case and not immersed in oil. I consider the performance of this Transformer under the above test very satisfactory. Yours very truly,
"(Signed) Ross & Holgate—J. Norman Smith."

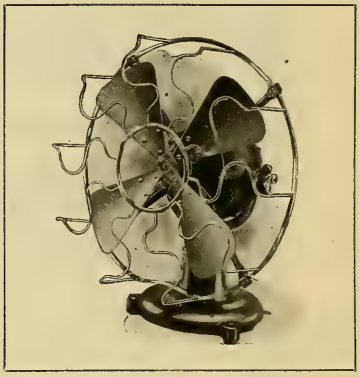
The Old Colonial Spirit



Was to strive for the "Right," at any cost

COLONIAL FANS

are the outcome of a similar spirit—

the determination to strive for right design, right construction, right material, right prices and right deliveries—everything right from the first line on the drawing board to the last nail in the case that holds the shipment.

That's the reason that the man who sold Colonial fans and the man who bought Colonial fans last year won't order any but Colonial fans this year.

Better see our catalogue
before placing your 1906 orders.

General Electric Company

Two Electric Heating Devices

For Daily Service

THE G. E. CEREAL COOKER

The G. E. Combination Cereal Cooker constitutes a water heater, a cereal cooker or double boiler, a vegetable steamer and an egg boiler.

It is made of sheet aluminum and tinned copper. The heating element is the Quartz Enamel type. This heater has high economy because it can be safely used with a small quantity of water which rapidly generates steam for cooking.

Combination Electric Cereal Cooker, Consuming 500 to 720 watts. One and two quart sizes.

Electric Coffee Percolator, Capacity 6 cups. Consumes 250 watts. 105 to 115 volts.

THE G. E. COFFEE PERCOLATOR

With the G. E. Percolator coffee can be prepared in a few minutes wherever connection can be made to an ordinary lamp socket.

The percolator is made of heavy copper highly polished and nickel plated. It is easy to use and wash. There is no flame, no alcohol to spoil polished table tops, no difficulty in controlling heat. It is always ready to use.

These two electric heating devices used in the morning will influence the introduction of others that will extend the service through the day. Central stations can profit by disposing of a stock of these.

WANTED

An experienced solicitor for steam heating, electric light and power contracts in St. Paul, Minnesota. Must be a first-class man. State experience, salary expected and reference. Address Northern Heating & Electric Company, 209 Bradley Bldg., St. Paul, Minn.

WANTED

Chandelier hanger for high grade work. The Sanborn-Marsh Electric Co., 116 N. Illinois St., Indianapolis, Ind.

FOR SALE

One alternating current generator; one smaller generator; one constant current transformer; street lamp; switchboard appliances, etc. Machines used about two years. Also 54-ft. 14-inch double leather endless belt. A big bargain to the right party. For particulars, address S. C., Lock Box 11, Greentown, Ind.

WANTED

By a large telephone factory in Chicago, young men not over 22 years of age, preferably graduates of high schools or technical schools to enter an apprenticeship course and be trained to install and operate modern central office equipment. Address, stating age, education, and experience, Box 594, care of Western Electrician, Chicago.

WANTED.

A well-known Eastern concern, manufacturing dynamos and motors, would like to make arrangements with a salesman well acquainted with the electrical trade in Pittsburg, to handle their apparatus. A very satisfactory proposition will be made to the right man. Address Box 59E, care of Western Electrician, 510 Marquette Bldg., Chicago.

WANTED SALESMAN

First-class salesman to sell new patent Rock Island dry batteries on commission basis. Must have first-class references. Apply at once. Rock Island Battery Co., 3rd and Vine Sts., Cincinnati, Ohio.

FOR SALE

Switchboard and apparatus outgrown and displaced by automatic equipment.

Kellogg switchboard—twenty 8-panel, 3-position, mahogany, equipped for 5200 main lines, ultimate capacity, 6,000 lines.

Kellogg toll board of 9 positions.

Kellogg telephones—4064 wall and 2136 desk.

Sterling terminal rack, with protection.

Power plant, with charging and ringing machines and storage batteries.

Offered for sale in whole or in part.

For particulars, see description in WESTERN ELECTRICIAN of January 20, Electrical Review of January 27, Telephony and Sound Waves for February; or address

NOTICE!

Notice is hereby given that specifications have been adopted by the City of Fond du Lac, by its Mayor and Common Council, for the granting of a franchise to construct, maintain and operate a plant or plants within or without the City of Fond du Lac, for the purpose of furnishing, and to furnish to the City of Fond du Lac and its citizens and others in said State electricity for light, heat and power, and to that end set poles and string wires and construct and maintain the necessary appurtenances to said business in said City of Fond du Lac, which said specifications are now on file in the office of the City Clerk of said City of Fond du Lac, to which reference is hereby made.

Now therefore, notice is hereby given that bids will be received for the sale of such franchise at the office of F. A. Bartlett, City Clerk of the City of Fond du Lac, up to 5 o'clock p.m., on Wednesday, May 16, 1906, which such bids shall propose, on behalf of the applicant, to pay annually into the treasury of said city, in consideration of receiving such franchise, a percentage of the gross receipts from the business carried on under said franchise. Such bid must be accompanied by a certified check in the sum of ten thousand ($10,000) dollars, as a guarantee of the acceptance of the franchise if granted and the giving of the bond provided for in said specifications.

By order of the Common Council.

Dated Fond du Lac, Wis., April 14, 1906.

F. A. BARTLETT,
City Clerk, Fond du Lac, Wis.

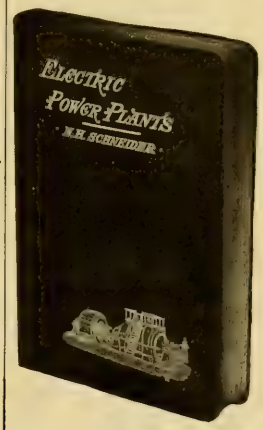
Electric Power Plants



BY NORMAN H. SCHNEIDER.

A book every steam and electrical engineer should have because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length. There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

290 PAGES, 203 ILLUSTRATIONS.

Full Limp Leather, Round Corners, Gilt Edges, $2.50. Cloth, $1.50.

AKRON, OHIO; OAKLAND, CALIFORNIA; TACOMA AND BELLINGHAM, WASHINGTON,

Have all gone automatic—Akron for 3,000 lines, Oakland for 5,000, Tacoma for 4,000 and Bellingham for 1,000.

Merit, absolute merit, was the reason why Automatic Telephone Equipment was selected by the Independent Companies in these cities.

They wanted the best, the very best, in telephone equipment.

They took their time and looked hard for it everywhere.

They found it in the Automatic.

That's where you will find it when you are ready to see it.

That's where the Independent Companies in all these cities found it—they adopted the Automatic:—

KELLOGG PHILOSOPHY — The Best Is The Cheapest

KELLOGG
Frequency Pole Changer

UTMOST **SIMPLICITY** OF OPERATION

The efficiency and beauty of the Selective Harmonic Ringing System of the "Kellogg Company" has been fully recognized by the entire Independent field, but the difficulty heretofore has been that the system required a generating device which involved a high first cost and a relatively large consumption of energy.

The Frequency Pole Changer was designed to meet and overcome all these objections.

It is a very simple device, each unit involving only the use of a magnetic coil and three sets of springs.

FRONT VIEW

ADVANTAGES.

1. Requires no attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from primary or storage batteries.
4. Dry cells can be used for the ringing current.
5. They can be furnished to work successfully under any load.
6. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
7. Operate successfully within the limits of 17 to 28 volts.
8. Noiseless in operation.
9. Only 3 contacts on each vibrator.

This Pole Changer can be used on either Common Battery or Magneto Exchanges.

Send for Folder No. 3 — *Correspondence solicited*

We ship more Idaho Poles than all other dealers combined
WESTERN LUMBER and POLE CO., Denver, Colo.

KELLOGG MICHIGAN WHITE CEDAR POLES
SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only. Write us for delivered prices.

THE SPECIAL TRAIN

TO THE

National Electric Light Association Meeting

ATLANTIC CITY, N. J..

JUNE 5, 6, 7 AND 8, 1906.

For the exclusive use of delegates, supply men, their friends and ladies, via

Pennsylvania Short Lines.

This special train will leave Chicago 2 p. m. (Chicago time), Sunday, June 3rd, so as to reach Atlantic City in the middle of Monday afternoon. By this schedule the party from the West will reach Atlantic City in time perhaps for an ocean dip, or at any rate in ample time for supper and the evening's amusements.

It is proposed to make this train first class in every respect—in fact, equal to the "Pennsylvania Limited" in service, viz., it will be equipped with the same beautiful parlor smoker, dining car, sleepers and observation car. This N. E. L. A. train will be run east from Chicago over the Fort Wayne Route through Fort Wayne, Pittsburg, Harrisburg and Philadelphia, all rail to Atlantic City.

In view of the enthusiasm already evident relative to this coming Atlantic City convention and the fact that all berths on the train are not "lowers" (!), those in the West desiring to join the convention party and go East from Chicago to Atlantic City on this special train should without delay early make reservations DIRECT, addressing

C. L. KIMBALL, Assistant General Passenger Agent,

ROOM 22, No. 2 SHERMAN ST., CHICAGO,

Who is handling all inquiries appertaining to reservations for Assistant Master of Transportation Frank L. Perry of the National Electric Light Association.

The Test Tag is a Guarantee

Each Westinghouse M. P. Lightning Arrester is given a bombardment of heavy static discharges, with line voltage simultaneously impressed on the arrester. If it stands the test it is sent out; if it does not, it is destroyed.

World's Best Battery

Here's the trademark. It **means** a whole lot. On the

ROCK ISLAND

NEW PATENT

DRY CELL

it's a warranty deed for more lasting worth than is loaded into **any other** dry battery. Every battery is **made by hand.** This mode of careful construction **insures** superiority. Competitive and exhaustive tests have proved that the Rock Island has 20 to 30 per cent. **greater efficiency** and

20 to 30 Per Cent. Longer Life

than others.

Our Standard No. 6 is the regular size most generally used for all purposes.

Our Standard No 8, 3½ x 8 inches, is the battery now largely used by builders of the best gas and gasoline engines and for automobiles and motor boats. Telephone Companies are finding No. 8 just the sort of battery needed for **their** best work. It is **the** battery for reliably **long** service. Higher at first cost—**Cheaper** in the long run.

C-W TRANSFORMERS

CHAPTER IV.

Five 400-K. V. A. Crocker-Wheeler core-type transformers ready for shipment. See Bulletin 65 WE.

The following was recently received from Ross & HOLGATE, the well-known consulting engineers of Montreal, Can.:

"It gives me great pleasure to say that I personally saw one of these 667-K. W., 35,000-volt Transformers subjected to a test of 60,000 volts from primary to ground. This pressure was applied to the Transformer after it was removed from the case and not immersed in oil. I consider the performance of this Transformer under the above test very satisfactory. Yours very truly,
"(Signed) ROSS & HOLGATE.—J. Norman Smith."

Electric Light Convention Numbers

The WESTERN ELECTRICIAN of June 2, 9 and 16, 1906, will give much space to the National Electric Light Convention, which will be held at Atlantic City, N. J., June 5th to 8th.

The first or preliminary number will be dated June 2d, and will contain the full official program and all other obtainable advance information concerning the meeting and will be of the greatest value, therefore, to members attending the Convention and will be found in the hands of all delegates and visitors during convention week.

The issue of June 9th will contain a report of the proceedings of the early portion of the meeting, some of the papers read and other Convention news.

The issue of June 16th will contain the report of the final days of the Convention together with papers read, discussions, convention notes, etc.

These three numbers will be of great and permanent value, and manufacturers and dealers wishing to increase their business with the electric lighting industry are urged to be largely represented therein. We hope you will make your reservation for space NOW, so as to receive a choice location.

This Shows Why

you'd "Better Buy Buckeye" Lamps. Buckeye Lamps have always been pioneers, and every innovation brought them nearer to the Buckeye Perfection of to-day. We've made a success of our lamps for the past 16 years. We were the first to manufacture the cellulose filament in this country; the first to introduce modern glassmaking machinery into a lamp factory.

Do you think you can go wrong by choosing a lamp with such a record.

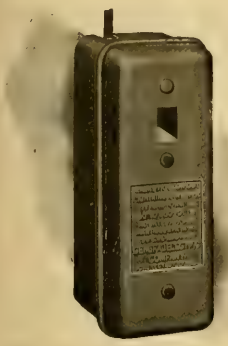
M D 2 Lightning Arresters

For All Direct Current Circuits



Exterior

The M D 2 lightning arrester offers a straight path to earth through an adjustable spark gap and a non-inductive resistance. It also has a magnetic blowout which prevents passage of line current.

One of the valuable features of the M D 2 arrester is the fact that all parts are readily inspected. On removing the cover of the porcelain enclosing box one can see at a glance if the arrester is in proper condition for the next storm.

The Cell To Sell To Excel

People who do not possess voltmeters, ammeters or other instruments for making electrical tests must buy batteries on hearsay or take their dealer's advice.

Dealers sell batteries for profit. If they are to take the time to explain to a customer, for instance, that an Edison cell delivers 150 ampere-hours for 82 cents, while a dry battery costing 25 cents delivers only 20 ampere-hours, they must see some return for their trouble.

A satisfied customer, however, is a profitable investment for an electrical dealer, as for anyone else. A man who has bought an Edison cell will tell his friends how it sparked his motor boat all one season and a part of the next; how it never "fagged," dried out, exploded or needed resting. He will come back to the dealer when he needs renewals, and he will direct his friends who want batteries to that dealer.

Would he be so apt to do this had he bought a dry battery? We shall reply by quoting Cooper's Primary Batteries: "No cell can furnish more than a minute current if it is dry, and, in fact, one of the difficulties experienced in making a successful dry cell is the difficulty of keeping it sufficiently wet.

"Certain defects are frequently observed. Deterioration takes place if the cells are kept in stock, even if no current is taken from them, and is shown chiefly by loss of electromotive force and increase of internal resistance. Another defect is that known as bursting. This bursting generally takes place in cells which are on circuit, but it is also liable to occur in cells which have never been used. A dry cell has the disadvantage that when it is exhausted it is of no further use and must be thrown away."

Dealers and consumers should send for our new Battery Book "WE." Supplied in quantities to dealers.

Edison Manufacturing Co.

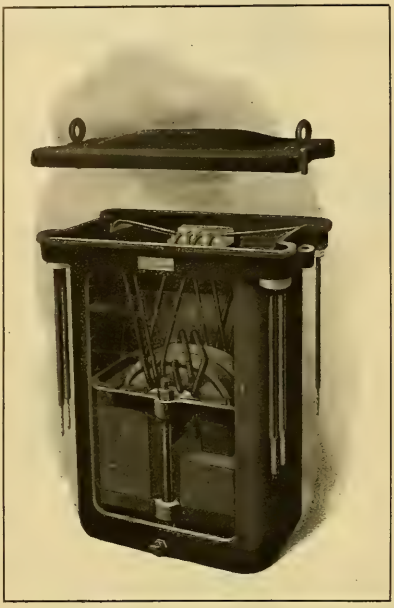
Wagner Electric Mfg. Company



WE feel so sure of the manner in which our transformers are insulated, so sure of the correctness of their design, and the quality of the material and workmanship, and so sure of their operation under heavy service conditions that we have no hesitancy in giving a guarantee on them, which we believe will appeal to Central Station Managers.

The performance of our transformers under heavy overload is beautiful, and we solicit the business of those plants requiring transformers economical of operation, of high-grade manufacture, and fully guaranteed by the manufacturer.

We solicit work requiring a high degree of engineering skill.

HARTFORD STEAM BOILER INSPECTION & INSURANCE COMPANY

39th ANNUAL STATEMENT

JANUARY 1, 1906

CAPITAL	$ 500,000.00
SURPLUS	1,261,459.69
RESERVES	1,926,686.81
ASSETS	3,688,146.50

The **Hartford** is the only company which makes a specialty of, and does exclusively, a steam boiler inspection and insurance business.

The **Hartford** is the only company whose entire talent and energies are applied to the study of steam, to the scientific construction and installation of boilers, and to their periodical inspection by expert mechanics.

The **Hartford** is the only company whose entire assets and resources are held exclusively for the protection of steam users, and the payment of losses occasioned by the explosion of steam boilers, and for no other hazard whatsoever.

The **Hartford** is now doing nearly nine-tenths of the Inspection and Insurance of Steam Boilers in the New England States, and nearly two-thirds of the entire amount done throughout the United States.

OTTO ENGINES

Uncle Sam Satisfied

OTTO OTTO

The following is clipped from the "Washington Post" of March 8, '06:

"The submarine torpedo boats Porpoise and Shark completed most satisfactory gasoline engine endurance tests in Narragansett Bay last week, running for six days and proving their ability to run over 600 miles in case their electric engines became disabled."

The above-named torpedo boats and 25 others in the navies of the U. S., England, Japan and Russia are equipped with **"Otto"** marine engines 200 H. P. each.

Surely a powerful endorsement of **"Otto"** quality.

Reduced Telephone Rates
IN CHICAGO

If the franchise of Chicago Telephone Company in the City of Chicago is extended, the following rates have been proposed for the Chicago Exchange.

SINGLE LINE TELEPHONES:

50 calls per month	$5.00
Next additional 50 calls in the month	5 cents each
Third 50 calls in the month	4 cents each
All calls in the month beyond 150	3 cents each

RESIDENCE RATES WITH UNLIMITED SERVICE:

Single line	$75.00 per annum
Two-party line	60.00 per annum

NICKEL SERVICE:

Direct line, 20 cents per day, including 4 calls
Direct line, 15 cents per day, including 2 calls
Two-party line, 15 cents per day, including 3 calls
Two-party line, 10 cents per day, including 1 call
Two-party line, residences only, 10 cents per day
Four-party line, residences only, 5 cents per day
Extension telephones : : : $1.00 per month

CHICAGO TELEPHONE COMPANY,
203 Washington Street, Chicago.

WHAT'S WRONG
with that TELEPHONE INVESTMENT of yours?

Why doesn't it pay you as well as the best of your investments?
Is the reason bad management or bad equipment? More likely the latter.
Probably the company is trying to do a 20th Century business with 19th Century apparatus.
If that's the case, it is spending more and earning less than it might if it had our Automatic Telephone equipment.
This is the only really modern telephone system. It produces the ideal telephone service—quick, sure and secret—at half the operating expense of a manual equipment, and this service commands better rates.
It costs a fixed price per hundred lines to enlarge the automatic exchange, instead of an increased price per each hundred lines, as in the manual equipment.
The automatic exchange is never outgrown; it never has to be "scrapped" and replaced by a complete new one, as with the manual. You just add to it as you do to a sectional bookcase.
All these points bear upon the stability and value of your telephone securities. They mean dividends to you.
Over ninety per cent of all the large orders placed during the past few years, either for new installations or replacements, have been for our automatic system, and all the companies adopting it have, from the increased earnings, been able to pay the interest on their bonds and a good dividend on their stock.
Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.	Florenceville, N. B., Can.	Perry, N. Y.
Akron, Ohio.	Grand Rapids, Mich.	Portland, Me.
Albuquerque, N. M.	Hastings, Neb.	Portland, Ore.
Allentown, Pa.	Havana, Cuba.	Princeton, N. J.
Auburn, Me.	Hazleton, Pa.	Riverside, Cal.

A PRACTICAL BOOK
FOR PRACTICAL MEN
"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $1.50.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for annunciators; for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It explains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery Installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

KELLOGG PHILOSOPHY— The Best is The Cheapest

KELLOGG
Frequency Pole Changer

UTMOST SIMPLICITY OF OPERATION

The efficiency and beauty of the Selective Harmonic Ringing System of the "Kellogg Company" has been fully recognized by the entire independent field, but the difficulty heretofore has been that the system required a generating device which involved a high first cost and a relatively large consumption of energy.

The Frequency Pole Changer was designed to meet and overcome all these objections.

It is a very simple device, each unit involving only the use of a magnetic coil and three sets of springs.

FRONT VIEW

ADVANTAGES.

1. Requires no attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from primary or storage batteries.
4. Dry cells can be used for the ringing current.
5. They can be furnished to work successfully under any load.
6. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
7. Operate successfully within the limits of 17 to 28 volts.
8. Noiseless in operation.
9. Only 3 contacts on each vibrator.

This Pole Changer can be used on either Common Battery or Magneto Exchanges.

THE SPECIAL TRAIN

TO THE

National Electric Light Association Meeting

ATLANTIC CITY, N. J.,

JUNE 5, 6, 7 AND 8, 1906.

For the exclusive use of delegates, supply men, their friends and ladies, via

Pennsylvania Short Lines.

This special train will leave Chicago 2 p. m. (Chicago time), Sunday, June 3rd, so as to reach Atlantic City in the middle of Monday afternoon. By this schedule the party from the West will reach Atlantic City in time perhaps for an ocean dip, or at any rate in ample time for supper and the evening's amusements.

It is proposed to make this train first class in every respect—in fact, equal to the "Pennsylvania Limited" in service, viz., it will be equipped with the same beautiful parlor smoker, dining car, sleepers and observation car. This N. E. L. A. train will be run east from Chicago over the Fort Wayne Route through Fort Wayne, Pittsburg, Harrisburg and Philadelphia, all rail to Atlantic City.

In view of the enthusiasm already evident relative to this coming Atlantic City convention and the fact that all berths on the train are not "lowers" (!), those in the West desiring to join the convention party and go East from Chicago to Atlantic City on this special train should without delay early make reservations DIRECT, addressing

C. L. KIMBALL, Assistant General Passenger Agent,

ROOM 22, No. 2 SHERMAN ST., CHICAGO,

Who is handling all inquiries appertaining to reservations for Assistant Master of Transportation Frank L. Perry of the National Electric Light Association.

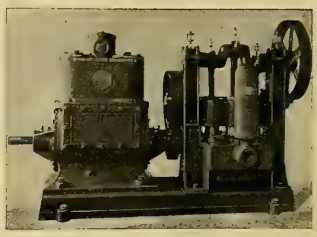
Westinghouse

Single Acting Steam Engines

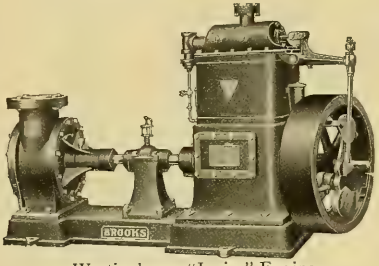
in the smaller capacities ranging from 5 H. P. to 400 H. P.

"Junior" "Standard" "Compound"

Made of the best material only and constructed with the same care in every particular as given to the manufacture of their largest heavy duty units.



Westinghouse "Standard" Engine
Driving Goulds Triplex Power Pump.



Westinghouse "Junior" Engine
Driving Brooks Centrifugal Pump.

The adaptability of these engines to the driving of power pumps is illustrated. They are equally efficient for driving all other classes of apparatus, either belted or direct connected.

The Westinghouse Machine Co.

Designers and Builders of Westinghouse-Parsons Steam Turbines, and of Horizontal and Vertical Steam Engines, Single and Double Acting Gas Engines and The Roney Mechanical Stoker.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

WESTON ELECTRICAL INSTRUMENT CO.,
Main Office and Works, Waverly Park, NEWARK, N. J.

Illuminated Dial Station Instruments.
These instruments are constructed upon the same general principle as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.
PARIS, FRANCE—E. H. Cadiot 12 Rue St. Georges.
BERLIN—European Weston Electrical Instrument Co., Ritterstrasse No. 88.

Weston Standard Illuminated Dial Potential Indicator, Style B.

Weston Standard
Portable Direct Reading Voltmeters and Millivoltmeters. Ammeters and Milliammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.
Our portable instruments are recognized as standard throughout the civilized world.
Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.
They are the most reliable, absolute standards for Laboratory use.

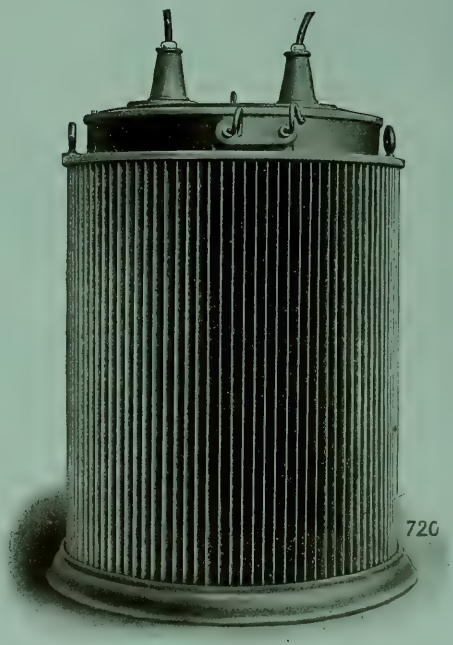
Allis-Chalmers Oil Insulated Transformers

Are In Service Throughout the United States, From Coast to Coast

With all these numerous installations there has never been a break-down in one of our Transformers; nor have we failed to meet our guarantees in any particular.

Oil-Filled Water-Cooled Transformer, 25 Cycle, 500 K. W., 20,000 to 375 Volts.



Oil-Filled Self-Cooled Transformer, 60 Cycle, 170 K. W., 20,000 to 2,300 Volts.

Send for our Bulletin 1047, which illustrates the details of construction so clearly that the reasons for this marvelous record are readily apparent.

WE ARE PREPARED TO BID ON TRANSFORMERS TO FULFILL ANY SPECIFICATIONS

Iron Clad Service Switch

This device was designed for use in locations exposed to dampness, corrosive fumes, or mechanical injury.

The case is of cast-iron, having a closely fitting door with spring latch, which can be sealed or pad-locked.

In the box is mounted a 25-ampere combined switch and cut-out on a porcelain base. The three following styles are now furnished:

Cat. No.		Price
1210	110-v. 2-wire	$3.12
1212	250-v. 2 "	3.75
1214	250-v. 3 "	4.50

Discount 50 per cent

$250
Saved on this pole at Topeka, Kas., by the Topeka Edison Co., by using FORTY KEARNEY CABLE CLAMPS

Kearney Clamps

PATENTED OCT. 10, 05

For Supporting Electric Light and Power Cables of From 3-0 to 1,500,000 C. M.

YOU should certainly give the Kearney Cable Clamp a trial. You may think you can do without them by using the old method. You can, but if, by using the Kearney Cable Clamp, you save time, labor, material and money don't you think it would be to your advantage to use them?

If you will send us an order for 25 or more to be shipped by prepaid freight, you can take 30 days to decide whether you prefer to return the clamps or the money. You can't lose. Let us hear from you

Send for Handsome 1906 Catalog.

SIMPLEX ELECTRIC HEATING CO.
Cambridgeport, Mass.

IF YOU USE Electric Current for sparking a gas engine, driving a fan motor, supplying current to an X-Ray outfit or operating railway signals, you want the Edison Primary Cell, the cheapest form of electric battery energy. The voltage does not fall with use; the battery needs no "resting." Once exhausted, a renewal makes it good as new. For expert information on Electric Batteries send for BOOK "WE."

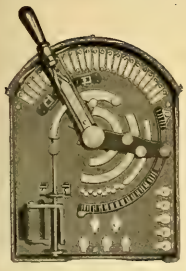
The "Carpenter" Type Printing Press Controller



Some of the largest printers in the country won't have any other controller for their motor driven flat bed presses but the "Carpenter." The reason is that it safeguards both the motor and press as far as is possible from damage, and gives every required speed in a natural and easy manner.

Our Bulletins 81 to 89½ give full information on this type.

Electric Light Convention Numbers

The WESTERN ELECTRICIAN of June 2, 9 and 16, 1906, will give much space to the National Electric Light Convention, which will be held at Atlantic City, N. J., June 5th to 8th.

The first or preliminary number will be dated June 2d, and will contain the full official program and all other obtainable advance information concerning the meeting and will be of the greatest value, therefore, to members attending the Convention and will be found in the hands of all delegates and visitors during convention week.

The issue of June 9th will contain a report of the proceedings of the early portion of the meeting, some of the papers read and other Convention news.

The issue of June 16th will contain the report of the final days of the Convention together with papers read, discussions, convention notes, etc.

These three numbers will be of great and permanent value, and manufacturers and dealers wishing to increase their business with the electric lighting industry are urged to be largely represented therein. We hope you will make your reservation for space NOW, so as to receive a choice location.

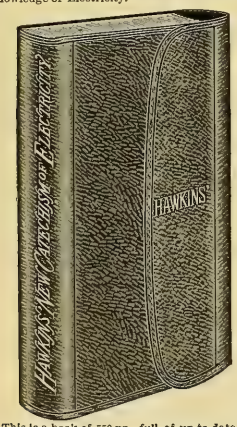
HAWKINS' NEW CATECHISM OF ELECTRICITY.
A PRACTICAL TREATISE.
TESTIMONIAL. Chas. M. Weir, Chief Engineer U. S. Projectile Works, Brooklyn, N. Y.: "It is one of the most practical and concise works on the subject I ever saw It is just the right thing in the right place, and I most cheerfully recommend it to all who desire a practical knowledge of Electricity."



This is a book of 550 pp., full of up-to-date information. 300 illustrations. Handsomely bound in red leather, pocketbook form, size 4½x6¼, with titles and edges in gold. Price, $2.00, postpaid. 100 page descriptive catalogue of electrical books free on request.
ELECTRICIAN PUBLISHING COMPANY,
510 Marquette Building, Chicago

A BOOK YOU SHOULD HAVE

Electric Power Plants

BY NORMAN H. SCHNEIDER.

A book every steam and electrical engineer should have because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length. There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

290 PAGES, 203 ILLUSTRATIONS.
Full Limp Leather, Round Corners, Gilt Edges, $2.50. Cloth, $1.50.

CHICAGO TELEPHONE COMPANY,
203 Washington Street, Chicago.

WHAT'S WRONG
with that TELEPHONE INVESTMENT of yours?

Why doesn't it pay you as well as the best of your investments?
Is the reason bad management or bad equipment? More likely the latter.
Probably the company is trying to do a 20th Century business with 19th Century apparatus.

If that's the case, it is spending more and earning less than it might if it had our Automatic Telephone equipment.

This is the only really modern telephone system. It produces the ideal telephone service—quick, sure and secret—at half the operating expense of a manual equipment, and this service commands better rates.

It costs a fixed price per hundred lines to enlarge the automatic exchange, instead of an increased price per each hundred lines, as in the manual equipment.

The automatic exchange is never outgrown; it never has to be "scrapped" and replaced by a complete new one, as with the manual. You just add to it as you do to a sectional bookcase.

All these points bear upon the stability and value of your telephone securities. They mean dividends to you.

Over ninety per cent of all the large orders placed during the past few years, either for new installations or replacements, have been for our automatic system, and all the companies adopting it have, from the increased earnings, been able to pay the interest on their bonds and a good dividend on their stock.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.	Florenceville, N. B., Can.	Perry, N. Y.
Akron, Ohio.	Grand Rapids, Mich.	Portland, Me.
Albuquerque, N. M.	Hastings, Neb.	Portland, Ore.
Allentown, Pa.	Havana, Cuba.	Princeton, N. J.
Auburn, Me.	Hazleton, Pa.	Riverside, Cal.
Auburn, N. Y.	Hopkinsville, Ky.	San Diego, Cal.
Battle Creek, Mich.	Jonesboro, Ark.	Santa Monica, Cal.
Bellingham, Wash.	Lake Benton, Minn.	Sawtelle, Cal.
Berlin, Germany.	Lewiston, Me.	Sioux City, Iowa.
Buxton, Iowa.	Lincoln, Neb.	South Bend, Ind.
Cadillac, Mich.	Los Angeles, Cal.	St. Marys, Ohio.
Chicago, Ill.	Manchester, Iowa.	Tacoma, Wash.
Clayton, Mo.	Marianao, Cuba.	Toronto Jct., Can.
Cleburne, Texas.	Medford, Wis.	Traverse City, Mich.
Columbus, Ga.	Miamisburg, Ohio.	Van Wert, Ohio.
Columbus, Ohio.	Mount Olive, Ill.	Watch Hill, R. I.
Dayton, Ohio.	New Bedford, Mass.	Wausau, Wis.
El Paso, Texas.	Oakland, Cal.	Westerly, R. I.
Fall River, Mass.	Ocean Park, Cal.	Wilmington, Del.
Ferguson, Mo.	Pentwater, Mich.	Yuma, Arizona.

KELLOGG PHILOSOPHY— —The Best Is The Cheapest

KELLOGG
Frequency Pole Changer

UTMOST SIMPLICITY OF OPERATION

The efficiency and beauty of the Selective Harmonic Ringing System of the "Kellogg Company" has been fully recognized by the entire Independent field, but the difficulty heretofore has been that the system required a generating device which involved a high first cost and a relatively large consumption of energy.

The Frequency Pole Changer was designed to meet and overcome all these objections.

It is a very simple device, each unit involving only the use of a magnetic coil and three sets of springs.

FRONT VIEW

ADVANTAGES.

1. Requires no attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from primary or storage batteries.
4. Dry cells can be used for the ringing current.
5. They can be furnished to work successfully under any load.
6. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
7. Operate successfully within the limits of 17 to 28 volts.
8. Noiseless in operation.
9. Only 3 contacts on each vibrator.

This Pole Changer can be used on either Common Battery or Magneto Exchanges.

THE SPECIAL TRAIN

TO THE

National Electric Light Association Meeting

ATLANTIC CITY, N. J.,

JUNE 5, 6, 7 AND 8, 1906.

For the exclusive use of delegates, supply men, their friends and ladies, via

Pennsylvania Short Lines.

This special train will leave Chicago 2 p. m. (Chicago time), Sunday, June 3rd, so as to reach Atlantic City in the middle of Monday afternoon. By this schedule the party from the West will reach Atlantic City in time perhaps for an ocean dip, or at any rate in ample time for supper and the evening's amusements.

It is proposed to make this train first class in every respect—in fact, equal to the "Pennsylvania Limited" in service, viz., it will be equipped with the same beautiful parlor smoker, dining car, sleepers and observation car. This N. E. L. A. train will be run east from Chicago over the Fort Wayne Route through Fort Wayne, Pittsburg, Harrisburg and Philadelphia, all rail to Atlantic City.

In view of the enthusiasm already evident relative to this coming Atlantic City convention and the fact that all berths on the train are not "lowers" (!), those in the West desiring to join the convention party and go East from Chicago to Atlantic City on this special train should without delay early make reservations DIRECT, addressing

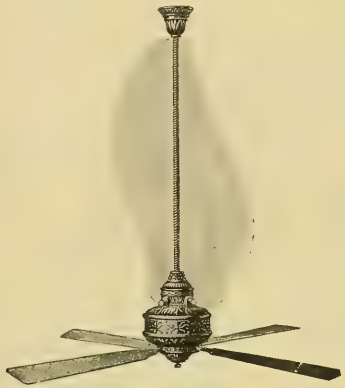
C. L. KIMBALL, Assistant General Passenger Agent,

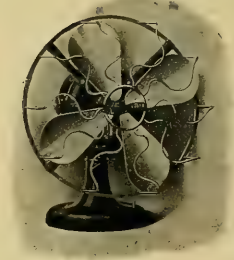
ROOM 22, No. 2 SHERMAN ST., CHICAGO,

Who is handling all inquiries appertaining to reservations for Assistant Master of Transportation Frank L. Perry of the National Electric Light Association.

"Economy"

in operating electric fans is in proportion to the current consumption. Note figures below showing low watt consumption of Westinghouse Fans.





Direct Current Desk Type

Size	R. P. M.	Watts
12-in.	1,000 and 1,300	25
12-in.	1,650	40
16-in.	1,000 and 1,300	50
16-in.	1,650	80

Alternating Current Desk Type

Size	Altern.	R. P. M.	Watts
12-in.	7,200	1,300 and 1,625	45
12-in.	16,000	1,300 and 1,625	65
16-in.	7,200	1,300 and 1,600	80
16-in.	16,000	1,300 and 1,600	120

Direct Current Ceiling Type

For all voltages—120 Watts.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER
Preface
I The Electric Current
II The Electric Battery

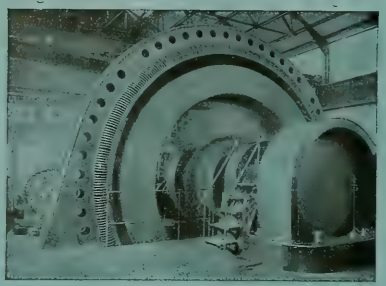
ALLIS-CHALMERS CO
MILWAUKEE WIS U S A



THE RISE OF A GREAT COMPANY

Allis-Chalmers Plants Supply the World

Machinery That Has Revolutionized Several of the Principal Industries

(Reprinted from Dun's Review.)

For the American of to-day few things have greater interest, from whatever point of view, than the rise and development of the mighty industrial enterprises upon which the prosperity of the country is now so largely dependent. And particularly is this true of the great engineering companies, whose work has been and always will remain constructive in its character—not the accumulation of huge fortunes based upon speculative enterprises or the acquirement of monopolistic privileges in already well tilled fields, but a reaching out into the unknown and laying hold upon the forces of nature to yoke and control them for the use of man. Such is the character of the work done by the Allis-Chalmers Company, whose creative and productive capacity is acknowledged to-day as among the foremost in the world.

Manufacturing is conducted by this company at six large plants, located in Milwaukee, Chicago, Scranton and Cincinnati. These are capable of employing about 12,000 men and the extensions at West Allis now in progress will eventually result in the employment of at least 18,000 men. The large new plant at West Allis, Milwaukee, which is constructed throughout on the "unit system," is regarded as one of the model engineering works of the world, both for designs and equipment.

Occupying the Electrical Field.

When Allis-Chalmers Company entered the electrical field, this was dominated by two large companies. In Cincinnati, however, there was a smaller concern, known as the Bullock Electric Manufacturing Company, which had for years been building electrical generating, transforming and driving apparatus, in sizes ranging from the smallest to the largest, and, through installations in this country and abroad, had acquired a reputation for the most skillfully designed and carefully constructed machinery on the market. This admirably equipped plant the Allis-Chalmers Company purchased and greatly enlarged, and soon developed facilities for the manufacture and sale of electrical machinery second to none in the world. The meaning of this becomes clear when one realizes that Allis-Chalmers Company also builds every type of prime mover—steam turbines, reciprocating steam engines, hydraulic turbines and gas engines—putting it in a position to accomplish what no other company in existence can perform, viz., the construction of complete power equipments of every description, with auxiliary electrical apparatus, in one set of shops and under one management. The result is harmonious working of the machinery in every detail and the highest possible efficiency.

Developing the Steam Turbine.

A little over a year ago the Allis-Chalmers Company entered the steam turbine field and its engineers have already made notable advances in the construction of power units of the rotary type. Among those now being installed is one of 5,500 kilowatts, built for the Brooklyn Rapid Transit Company. The introduction of the steam turbine and its rapidly increasing use has not, however, affected the sale of reciprocating engines, which still have their distinct field of operation.

Equipment of Immense Power Stations.

Steam engines aggregating nearly 6,000,000 horsepower have been built by the Allis-Chalmers Company. These range in size from 30 to 15,000 horsepower each, and number between 5,000 and 6,000. They are installed in every quarter of the globe. In the most important power plants the engines are of this build. Greater New York has the four largest power stations in America. They are all equipped with Allis-Chalmers engines, as follows:

The New York City Railway Company, formerly the Metropolitan, operating every surface car in New York City, has at its Ninety-sixth street power house eleven engines, aggregating about 61,000 horsepower at the minimum rating.

The Interborough Rapid Transit Company has seventeen engines, aggregating more than 200,000 horsepower, nine of which are in its Fifty-eighth street power house, for operating the subway, and eight at the Manhattan station for operating the elevated roads.

In Brooklyn the Brooklyn Rapid Transit Company has nineteen engines aggregating 60,000 horsepower.

In Chicago the Metropolitan West Side Elevated Railway Company has eight Allis-Chalmers engines, aggregating 30,000 horsepower, and the South Side Elevated Railroad Company has eight also of these engines, aggregating 30,000 horsepower.

Abroad, the engines are operated in London, Glasgow, Dublin, and other cities of Great Britain; in France, Germany, and Austria; in Australia, South Africa, the Argentine Republic, Chile, and Mexico; in Cuba, in the Sandwich Islands, and in China.

Mammoth Pumping Engines.

The Allis-Chalmers Company's steam pumping engines are commensurate in size and importance with its power station apparatus. The first "high duty" pumping engine of the triple expansion, vertical type, which has been adopted everywhere by other makers as the highest standard of construction, was originated by this company. It was built for the Milwaukee water works and has a capacity of 6,000,000 gallons daily. Pumping engines of the same type made by this company, ranging in capacity from 3,000,000 to 50,000,000 gallons per twenty-four hours, are now located in large centers of population throughout the United States—at Albany, Chicago, Detroit, New Orleans, Omaha, Pittsburg, McKeesport, San Antonio, Sacramento, St. Louis, Washington and other leading cities.

Electricity Drives Powerful Pumps.

Besides this type of pumping machinery, the company has developed pumps of the centrifugal type, of which a great number have been installed and are at present being installed in different parts of the country. Boston has nine of these engines, New Orleans nine and Chicago four. About thirty-five are at present in various stages of construction in the company's works at West Allis. Six of the largest of these pumps have a capacity of 165,000,000 gallons per twenty-four hours each. They are of the vertical shaft type and are operated by direct connected synchronous motors.

Harnessing the Waterfalls.

Realizing the great advantages to be derived from the development of the natural water powers of this country, the Allis-Chalmers Company has put itself in a position to build hydraulic turbines and governors especially designed to meet the requirements of any given case. Machines of the type furnished may be seen in operation at Niagara Falls, where the force of the waters is converted into electrical energy for both American and Canadian companies.

At Shawinigan, Province of Quebec, Canada, is another great hydraulic plant of like character. The sum of the energy developed by turbines at these two places alone is equal to 135,000 horsepower.

Powerful Gas Engines.

The Allis-Chalmers Company has acquired the American patents and is the sole licensee for the eastern hemisphere for the Nurnberg gas engine. These engines are built in many sizes, ranging from 450 to 4,000 horsepower. They operate with illuminating gas, natural gas, furnace gas or producer gas.

Machinery for All Mining Work.

From Alaska to Cape Horn, from Maine to California, in Australia, South Africa, the mountains bordering Russia, in China, in Japan, and in many of the countries of Europe the mining machinery of the Milwaukee company is the acknowledged standard of excellence. The steam stamp, now so generally used for crushing copper ores, owes its development to the ingenuity of Allis-Chalmers engineers. The company makes machinery for every operation in mining, from the hoist at the pit's mouth to devices for recovering the metals themselves by roasting, crushing, pulverizing, sifting and all the processes necessary to separate them from the mixtures in which nature stored them for man's benefit.

The Crushed Rock and Cement Industries.

The Gates rock and ore breakers made by this company are known all over the world. The latest of these is the new style "K" breaker. They are extensively employed in crushing rock for concrete work and ballasting railroad beds, and for public highways. Complete portable rock crushing plants built on railroad cars form one of the products of the company.

Cement is rapidly taking the place of masonry for structural work and its manufacture has increased with remarkable rapidity. This company has kept pace with the industry in the production of cement making machinery, and its work in this line ranks with its other machinery. Its machinery operates in the largest and best plants in the country. Among the machines used in this work are rock breakers, crushing rolls, ball mills, mixing pans, tube mills, rotary kilns and driers, revolving screens and elevators.

The Passing of Grandfather's Mill.

It was the Milwaukee company which, thirty years ago, revolutionized the flour mill industry by breaking away from the old system of grinding with burr stones and introducing the roller mill. The roller mill is used everywhere to-day. With the change in the initial machinery came opportunities for improvements all along the line. The Allis-Chalmers Company met these demands and has kept in the lead from the first. The largest flour mills in America, including the great group at Minneapolis, where more flour is produced than anywhere else on the globe, were equipped by the Allis-Chalmers Company and there is scarcely a country in the world where its mills have not been installed.

Pioneers in Equipping Lumber Mills.

The double cutting band mill, which has added more than 40 per cent to the capacity of the saw mills of America, was introduced by this concern. The company is to-day, as it has been for many years, the foremost builder of saw mill machinery. For more than a quarter of a century its products have been the standards with which all others have been compared. The principal saw mill plants in America and many in other parts of the world have been equipped from its works. One of these modern mills, containing six double cutting band mills and a complete outfit of accessory machinery, is capable of cutting 500,000 feet of lumber in a ten-hour day.

Timber Preserving.

The value of preservative treatment for timber which is to be exposed to the elements is well recognized. Railroad ties, poles for telephones, telegraph and trolley wires, and the timber used in piers, wharves and bulkheads are particularly subject to decay unless they are treated beforehand with creosote or other chemicals. The Allis-Chalmers Company builds all the larger kinds of apparatus for this work. Its product includes the retorts in which the timber is treated, cars and other necessary accessories.

The World for Its Field.

It must be admitted that nothing less than an engineering encyclopedia could adequately describe the variety and extent of the Allis-Chalmers products. In the economic life of the nation they play a large part, for upon the prosperity of the company depends the livelihood of many thousands of American employes and their families. Profoundly affected by it are yet more thousands whose labor supplies the domestic market.

But the scope of the company's operations is not limited by bounds of country. Its field is world wide. Its influence is felt by millions.

Iron Clad Service Switch

This device was designed for use in locations exposed to dampness, corrosive fumes, or mechanical injury.

The case is of cast-iron, having a closely fitting door with spring latch, which can be sealed or pad-locked.

In the box is mounted a 25-ampere combined switch and cut-out on a porcelain base. The three following styles are now furnished:

Cat. No.		Price
1210	110-v. 2-wire	$3.12
1212	250-v. 2 "	3.75
1214	260-v. 3 "	4.50

Discount 50 per cent

Special prices in quantities

Electric Light Convention Numbers

The WESTERN ELECTRICIAN of June 2, 9 and 16, 1906, will give much space to the National Electric Light Convention, which will be held at Atlantic City, N. J., June 5th to 8th.

The first or preliminary number will be dated June 2d, and will contain the full official program and all other obtainable advance information concerning the meeting and will be of the greatest value, therefore, to members attending the Convention and will be found in the hands of all delegates and visitors during convention week.

The issue of June 9th will contain a report of the proceedings of the early portion of the meeting, some of the papers read and other Convention news.

The issue of June 16th will contain the report of the final days of the Convention together with papers read, discussions, convention notes, etc.

These three numbers will be of great and permanent value, and manufacturers and dealers wishing to increase their business with the electric lighting industry are urged to be largely represented therein. We hope you will make your reservation for space NOW, so as to receive a choice location.

Does Your Load Fluctuate?
Do Your Motors Hold Their Speed?
Do Your Lights Flicker?

For absorbing load fluctuations, for equalizing generator loads, and for maintaining constant line pressure, neither theory nor practice has produced the equal of a Gould Storage Battery. It does not mean expense, it means *economy*—an investment that will generally pay for itself in two or three years.

It will pay you to investigate. Write for our Bulletins and "Facts."

C-W TRANSFORMERS

CHAPTER IV.

Five 400-K. V. A. Crocker-Wheeler core-type transformers ready for shipment. See Bulletin 65 WE.

The following was recently received from Ross & Holgate, the well-known consulting engineers of Montreal, Can.:

"It gives me great pleasure to say that I personally saw one of these 667-K. W., 35,000-volt Transformers subjected to a test of 60,000 volts from primary to ground. This pressure was applied to the Transformer after it was removed from the case and not immersed in oil. I consider the performance of this Transformer under the above test very satisfactory. Yours very truly,
"(Signed) Ross & Holgate—J. Norman Smith."

The "Carpenter" Type Printing Press Controller

Some of the largest printers in the country won't have any other controller for their motor driven flat bed presses but the "Carpenter." The reason is that it safeguards both the motor and press as far as is possible from damage, and gives every required speed in a natural and easy manner.

Our Bulletins 81 to 89½ give full information on this type.

PATENTED.
No. 96 Double Jet Torch. $5.00 Each.

WIND PROOF BRAZING TORCH

The Turner Double Jet Torch No. 96 produces the highest heat that is obtainable from gasoline. It is constructed especially for Electricians' use and can be used for either inside or outdoor work. The strongest wind has no effect on it, and as a Lineman's tool and for brazing in the wind it is unexcelled.

As a Practical Book for Practical Men Spangenberg's Book Ranks First
All the engineering information you should have, and you really need is contained in this book in plain, practical and concise form.

Spangenberg's Steam and Electrical Engineering

is a complete library covering the subject in all its various branches and contains 675 pages.
The only book ever published containing 1055 questions and answers. Written so you can understand it.
$3.50 is the price, and it is sold with the understanding that it may be returned if not satisfactory, and your money will be refunded immediately. Out of 10,000 books sold only two have been returned. This fact speaks for itself.

ANNOUNCEMENT

MAY 1, 1906

The plant and other assets of the NATIONAL ELECTRIC COMPANY were this day formally transferred to the NATIONAL BRAKE & ELECTRIC COMPANY, a corporation of Wisconsin with a paid up capital of One Million Dollars.

The new Company as successor of the CHRISTENSEN ENGINEERING COMPANY and the NATIONAL ELECTRIC COMPANY will continue to manufacture air brakes and electrical machinery with extended facilities and abundant working capital. In soliciting a continuance of the patronage with which its predecessors in the business were favored, it takes pleasure in assuring prompt attention to orders, superior workmanship and reasonable prices.

As the pioneers in the manufacture of motor driven air compressors and in the adaption of air brakes for electric traction service, it proposes to maintain its leadership by the development of improved devices to meet the new conditions due to the more exacting demands of the present day trade.

To facilitate prompt attention to all inquiries referring to prices and sales of its product, the General Sales Office has been located at No. 519 First National Bank Building, Chicago, Ill., where all correspondence referring to same should be addressed.

Very truly yours,

National Brake & Electric Company

OTTO ENGINES
Bought in 1895—Been Running Constantly

The Naugatuck News, Naugatuck, Conn., writing for supplies incidentally remarks: "The engine has been a fine one, in fact the best investment we ever made." Surely a splendid tribute to pay to a piece of machinery. "OTTO" design, "OTTO" materials and "OTTO" workmanship combine to make "OTTO" excellence. "OTTO" engines can never be "cheap," yet are always the CHEAPEST.

Two-party line : : :	60.00 per annum

NICKEL SERVICE:

Direct line, 20 cents per day, including 4 calls
Direct line, 15 cents per day, including 2 calls
Two-party line, 15 cents per day, including 3 calls
Two-party line, 10 cents per day, including 1 call
Two-party line, residences only, 10 cents per day
Four-party line, residences only, 5 cents per day
Extension telephones : : : $1.00 per month

CHICAGO TELEPHONE COMPANY,
203 Washington Street, Chicago.

WHAT'S WRONG
with that TELEPHONE INVESTMENT of yours?

Why doesn't it pay you as well as the best of your investments?
Is the reason bad management or bad equipment? More likely the latter.
Probably the company is trying to do a 20th Century business with 19th Century apparatus.

If that's the case, it is spending more and earning less than it might if it had our Automatic Telephone equipment.

This is the only really modern telephone system. It produces the ideal telephone service—quick, sure and secret—at half the operating expense of a manual equipment, and this service commands better rates.

It costs a fixed price per hundred lines to enlarge the automatic exchange, instead of an increased price per each hundred lines, as in the manual equipment.

The automatic exchange is never outgrown; it never has to be "scrapped" and replaced by a complete new one, as with the manual. You just add to it as you do to a sectional bookcase.

All these points bear upon the stability and value of your telephone securities. They mean dividends to you.

Over ninety per cent of all the large orders placed during the past few years, either for new installations or replacements, have been for our automatic system, and all the companies adopting it have, from the increased earnings, been able to pay the interest on their bonds and a good dividend on their stock.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.	Florenceville, N. B., Can.	Perry, N. Y.
Akron, Ohio.	Grand Rapids, Mich.	Portland, Me.
Albuquerque, N. M.	Hastings, Neb.	Portland, Ore.
Allentown, Pa.	Havana, Cuba.	Princeton, N. J.
Auburn, Me.	Hazleton, Pa.	Riverside, Cal.
Auburn, N. Y.	Hopkinsville, Ky.	San Diego, Cal.
Battle Creek, Mich.	Jonesboro, Ark.	Santa Monica, Cal.
Bellingham, Wash.	Lake Benton, Minn.	Sawtelle, Cal.
Berlin, Germany.	Lewiston, Me.	Sioux City, Iowa.
Buxton, Iowa.	Lincoln, Neb.	South Bend, Ind.
Cadillac, Mich.	Los Angeles, Cal.	St. Marys, Ohio.
Chicago, Ill.	Manchester, Iowa.	Tacoma, Wash.

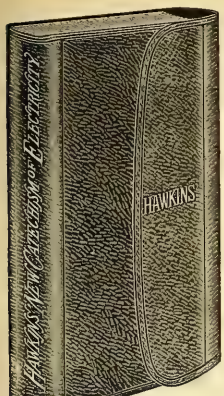
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

KELLOGG MICHIGAN WHITE CEDAR POLES
SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only.
Write us for delivered prices.

ABELES & TAUSSIG - - ST. LOUIS

THE SPECIAL TRAIN

TO THE

National Electric Light Association Meeting

ATLANTIC CITY, N. J.,

JUNE 5, 6, 7 AND 8, 1906.

For the exclusive use of delegates, supply men, their friends and ladies, via

Pennsylvania Short Lines.

This special train will leave Chicago 2 p. m. (Chicago time), Sunday, June 3rd, so as to reach Atlantic City in the middle of Monday afternoon. By this schedule the party from the West will reach Atlantic City in time perhaps for an ocean dip, or at any rate in ample time for supper and the evening's amusements.

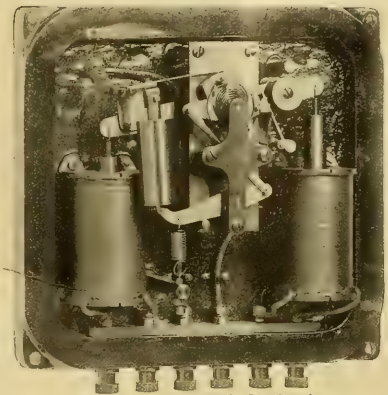
It is proposed to make this train first class in every respect—in fact, equal to the "Pennsylvania Limited" in service, viz., it will be equipped with the same beautiful parlor smoker, dining car, sleepers and observation car. This N. E. L. A. train will be run east from Chicago over the Fort Wayne Route through Fort Wayne, Pittsburg, Harrisburg and Philadelphia, all rail to Atlantic City.

In view of the enthusiasm already evident relative to this coming Atlantic City convention and the fact that all berths on the train are not "lowers" (!), those in the West desiring to join the convention party and go East from Chicago to Atlantic City on this special train should without delay early make reservations DIRECT, addressing

C. L. KIMBALL, Assistant General Passenger Agent,

ROOM 22, No. 2 SHERMAN ST., CHICAGO,

Who is handling all inquiries appertaining to reservations for Assistant Master of Transportation Frank L. Perry of the National Electric Light Association.



Westinghouse Automatic Synchronizer.

Are Lamps Good Enough For You?

When we first brought out the "indicating synchroscopes" people said, "lamps are good enough for us," yet to-day our synchroscopes are in universal use.

Do not repeat the error, and say the "indicating synchroscope" is good enough. Be progressive.

Synchronize Automatically

and prevent accidents, save time and operating expenses

Send for our publication 7038, which explains the operation of synchronizers when used with Rotary Converters.

MANY SHOPS OF MODERN CONSTRUCTION

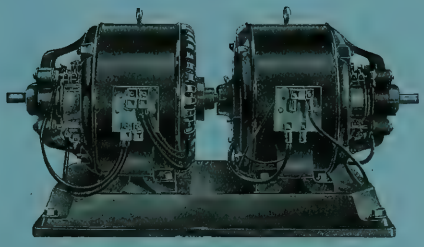
Are Using Allis-Chalmers Motors Exclusively

BECAUSE

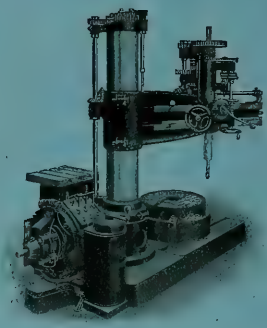
They Are Skillfully Designed, Carefully Constructed and Give Enduring Satisfaction.

We Do Not Offer Any Motors of the "Skeleton Frame" Type—Our Machines Are Strongly Built and Liberally Rated.

Send for the Bulletins Describing Them.



Three-Wire Balancer for Multiple Voltage System.



Allis-Chalmers Type "N" Motor Driving Radial Drill.

H. Ward Leonard Multiple Voltage System
The Allis-Chalmers System of Control for Variable Speed Motors
Is the Most Successful Means of Speed Regulation Yet Devised

Bulletin 1044 Tells of Its Manifold Advantages, Among Which Are:

Maximum Range of Speed Minimum Size of Motor
Highest Economy of Current

One of the Important Features of our System is that it lends itself admirably to Existing Installations. Any Motor can be run on this System without any change whatever, it being only necessary to supply two or more different Voltages and add the required Controllers. Our Motors are, however, especially adapted for this service.

C-W TRANSFORMERS

CHAPTER IV.

Five 400-K. V. A. Crocker-Wheeler core-type transformers ready for shipment. See Bulletin 65 WE.

The following was recently received from Ross & Holgate, the well-known consulting engineers of Montreal, Can.:

"It gives me great pleasure to say that I personally saw one of these 667-K. W., 35,000-volt Transformers subjected to a test of 60,000 volts from primary to ground. This pressure was applied to the Transformer after it was removed from the case and not immersed in oil. I consider the performance of this Transformer under the above test very satisfactory. Yours very truly,
"(Signed) Ross & Holgate—J. Norman Smith."

There Are Many Reasons

why you should investigate the product of the **International Electric Meter Co.**

Many instruments are magnetic vane type.

Many instruments have unevenly divided scales.

Many instruments have spring control, reading of which is not always accurate.

International Instruments have the Lightest Moving Coils.

International Instruments have the Most Evenly Divided Scales.

International Instruments have GRAVITY CONTROL and hence maintain the Most Accurate Readings.

A BATTERY INVESTIGATION

GUARANTEED [illegible] in the market, the

R·I BAT

ROCK ISLAND NEW PATENT DRY CELL

Challenges investigation. It does not crystallize, dry up or freeze, and possesses the greatest recuperative powers of any battery ever made. Indorsed by the leading telephone companies, telephone, gas and gasoline engine and automobile manufacturers — we could summon an army of witnesses to prove the exclusive merit to be found only in the Rock Island. Its trade mark is a synonym for ***all*** that is best in a dry cell battery. ***Heaviest*** zinc, ***highest*** voltage, ***greatest*** current capacity and ***longest*** life are combined in the Rock Island.

Our standard No. 8 is the best battery for higher class work. Standard No. 6 is the regular size for general purposes.

Department A will be glad to quote you prices.

ROCK ISLAND BATTERY CO.

NINTH AND SYCAMORE STS., CINCINNATI, O.

Stanley-G. I. C-7 Circuit Breakers

effectively protect your motors and lines by automatically opening the circuit upon the occurrence of an overload. While the initial cost of a switch with fuses is somewhat less than the cost of a Circuit Breaker, the fuses must be replaced as often as they are blown. All that is necessary with a circuit breaker is to close the circuit by a pull on the handle.

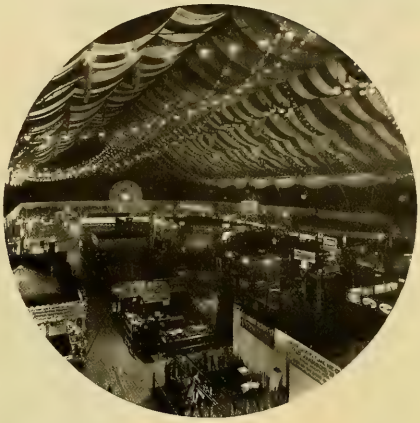
Second Annual Electrical Show

COLISEUM, CHICAGO, JANUARY 14-26, 1907



The Market Place for Everything Electrical

Many manufacturers and dealers have already contracted for space. The exhibits in every line will be extensive and comprehensive. Apply for space now in order to secure best location.

ADDRESS

ELECTRICAL TRADES EXPOSITION COMPANY

HOMER E. NIESZ, Managing Director

139 Adams Street - - CHICAGO, ILL.

Electric Light Convention Numbers

The WESTERN ELECTRICIAN of June 2, 9 and 16, 1906, will give much space to the National Electric Light Convention, which will be held at Atlantic City, N. J., June 5th to 8th.

The first or preliminary number will be dated June 2d, and will contain the full official program and all other obtainable advance information concerning the meeting and will be of the greatest value, therefore, to members attending the Convention and will be found in the hands of all delegates and visitors during convention week.

The issue of June 9th will contain a report of the proceedings of the early portion of the meeting, some of the papers read and other Convention news.

The issue of June 16th will contain the report of the final days of the Convention together with papers read, discussions, convention notes, etc.

These three numbers will be of great and permanent value, and manufacturers and dealers wishing to increase their business with the electric lighting industry are urged to be largely represented therein. We hope you will make your reservation for space NOW, so as to receive a choice location.

Electric Chafing Dishes

For Dainty Lunches

Safe—No flame for the wind to blow out. No danger from explosion.

Clean—No coal, gas or alcohol to cause smoke.

Convenient—Very simple to operate. No attention is required after turning on current. Connection can be made from an ordinary lamp socket.

Efficient—Heat is evenly distributed. Cost of operation lower than for any other.

Chafing Dish.
Outside made of aluminum and the inside of plated copper.

The Two-Heat Control

possible in this chafing dish is a guarantee of success with receipts requiring nice discrimination in the cooking.

Central stations operating or about to organize a heating department will profit by disposing of a stock of these.

SALES OFFICES IN ALL LARGE CITIES

The "Carpenter" Type Printing Press Controller

Some of the largest printers in the country won't have any other controller for their motor driven flat bed presses but the "Carpenter." The reason is that it safeguards both the motor and press as far as is possible from damage, and gives every required speed in a natural and easy manner.

Our Bulletins 81 to 89½ give full information on this type.

POSITION WANTED

By an all around electrician in most all kinds of electrical work, such as construction, wiring, installing of dynamos, motors and plants and maintenance. 18 years' experience, practical and technical; 9 years in stationary engineering. Up-to-date in most all kinds of work. Steady place wanted. Address, with particulars, Box 602, care Western Electrician, 507 Marquette Bldg., Chicago.

POSITION WANTED

As engineer and electrician in an electric light plant. Nine years' experience with high and low speed engines, dynamos, motors, wiring, line work, arc lamp repairing, boilers, pumps and almost anything connected with a plant. Am 25 years of age, have best of references and can come on 10 days' notice. Am at present in charge of a light, heat and power plant. Address Box 604, care of Western Electrician, 507 Marquette Building, Chicago.

POSITION WANTED

By a young man, age 29, student of an electrical correspondence school, desires a situation with electrician, or electric construction, repairing or telephone company, or any branch of the electrical business where good chance is offered. State particulars and wages to begin with. S. P. DAUGHERTY, Edwardsburg, Mich.

WANTED

Incandescent Lamp Salesman. State age, experience, qualification, territory familiar with and salary expected. Address Box 599, care Western Electrician, 510 Marquette Building, Chicago.

WANTED.

A technical graduate who has had practical experience in designing switchboards, as switchboard engineer; also, switchboard designers. Address Engineering Department, Stanley-G. I. ELECTRIC MFG. COMPANY, Pittsfield, Mass.

WANTED

Several young men to plan telephone toll line and cable construction. Preference will be given to men with good electrical educations. The work is located in western part of Pennsylvania. Necessary expenses paid when out of town. No applications considered unless age and salary expected are stated. Address Box 603, care of Western Electrician, 507 Marquette Bldg., Chicago.

WANTED

Assistant foreman of repair shop. Must be able to locate troubles on motors and generators, and direct the rewinding of same. Chance of advancement. Write, giving experience in full. Address Box 606, care of Western Electrician, 507 Marquette Building, Chicago.

WANTED

A man to take charge of armature room, electrical repair shop. Must understand alternating and direct current. First-class references are required. Address Box 605, care of Western Electrician, 507 Marquette Building, Chicago.

707

ELECTRICITY MADE SIMPLE.

233 Pages. 108 Illustrations. **By CLARK CARYL HASKINS.** **Paper .50.**

A BOOK DEVOID OF TECHNICALITIES—SIMPLE, PLAIN AND UNDERSTANDABLE.

There are many elementary books about electricity upon the market, but this is the first one presenting the matter in such shape that the layman may understand it, and, at the same time, not written in a childish manner.

This little work is not intended for the instruction of experts, nor as a guide for professors. The author has endeavored to bring the matter down to the level of those whose opportunities for gaining information on the branches treated have been limited.

Four chapters are devoted to Static Electricity; three each to Chemical Batteries and Light and Power; two each to Terrestrial Magnetism and Electro-Magnetism; one each to Atmospheric Electricity; Lightning Rods; Electro-Chemistry; Applied Electro-Magnetism; Force, Work and Energy; Practical Application of Ohm's Law; also a chapter upon Methods of Developing Electricity, other than Chemical.

The large number of examples that are given to illustrate the practical application of elementary principles is gaining for it a reputation as a text-book for schools and colleges.

FOR ENGINEERS, DYNAMO MEN, FIREMEN, LINEMEN, WIREMEN AND LEARNERS. FOR STUDY OR REFERENCE.

ANNOUNCEMENT

MAY 1, 1906

The plant and other assets of the NATIONAL ELECTRIC COMPANY were this day formally transferred to the NATIONAL BRAKE & ELECTRIC COMPANY, a corporation of Wisconsin with a paid up capital of One Million Dollars.

The new Company as successor of the CHRISTENSEN ENGINEERING COMPANY and the NATIONAL ELECTRIC COMPANY will continue to manufacture air brakes and electrical machinery with extended facilities and abundant working capital. In soliciting a continuance of the patronage with which its predecessors in the business were favored, it takes pleasure in assuring prompt attention to orders, superior workmanship and reasonable prices.

As the pioneers in the manufacture of motor driven air compressors and in the adaption of air brakes for electric traction service, it proposes to maintain its leadership by the development of improved devices to meet the new conditions due to the more exacting demands of the present day trade.

To facilitate prompt attention to all inquiries referring to prices and sales of its product, the General Sales Office has been located at No. 519 First National Bank Building, Chicago, Ill., where all correspondence referring to same should be addressed.

Very truly yours,

National Brake & Electric Company

All calls in the month beyond 150 :	3 cents each

RESIDENCE RATES WITH UNLIMITED SERVICE:

Single line : : : :	$75.00 per annum
Two-party line : : :	60.00 per annum

NICKEL SERVICE:

Direct line, 20 cents per day, including 4 calls
Direct line, 15 cents per day, including 2 calls
Two-party line, 15 cents per day, including 3 calls
Two-party line, 10 cents per day, including 1 call
Two-party line, residences only, 10 cents per day
Four-party line, residences only, 5 cents per day
Extension telephones : : : $1.00 per month

CHICAGO TELEPHONE COMPANY,
203 Washington Street, Chicago.

WHAT'S WRONG
with that TELEPHONE INVESTMENT of yours?

Why doesn't it pay you as well as the best of your investments?
Is the reason bad management or bad equipment? More likely the latter.
Probably the company is trying to do a 20th Century business with 19th Century apparatus.

If that's the case, it is spending more and earning less than it might if it had our Automatic Telephone equipment.

This is the only really modern telephone system. It produces the ideal telephone service—quick, sure and secret—at half the operating expense of a manual equipment, and this service commands better rates.

It costs a fixed price per hundred lines to enlarge the automatic exchange, instead of an increased price per each hundred lines, as in the manual equipment.

The automatic exchange is never outgrown; it never has to be "scrapped" and replaced by a complete new one, as with the manual. You just add to it as you do to a sectional bookcase.

All these points bear upon the stability and value of your telephone securities. They mean dividends to you.

Over ninety per cent of all the large orders placed during the past few years, either for new installations or replacements, have been for our automatic system, and all the companies adopting it have, from the increased earnings, been able to pay the interest on their bonds and a good dividend on their stock.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.

KELLOGG PHILOSOPHY— —The Best is The Cheapest

KELLOGG
Frequency Pole Changer

UTMOST SIMPLICITY OF OPERATION

The efficiency and beauty of the Selective Harmonic Ringing System of the "Kellogg Company" has been fully recognized by the entire Independent field, but the difficulty heretofore has been that the system required a generating device which involved a high first cost and a relatively large consumption of energy.

The Frequency Pole Changer was designed to meet and overcome all these objections.

It is a very simple device, each unit involving only the use of a magnetic coil and three sets of springs.

FRONT VIEW

ADVANTAGES.

1. Requires very little attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from primary or storage batteries.
4. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
5. Operates successfully on any standard voltage of a telephone exchange.
6. Practically noiseless in operation.
7. Only THREE contacts on each vibrator.
8. The vibrators have a very long spring, hence they will not break or change the frequency.

This Pole Changer can be used on either Common Battery or Magneto Exchanges.

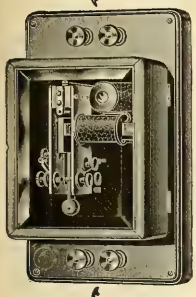
"DO YOU GET OUR RINGS?"



You would if you used the
Improved Sandwich Pole Changer

The most efficient and the only reliable ringer on the market.

Measures only 9x6x5 inches; weighs only 4 lbs. We use no primary battery for the vibrator; actual consumption of current from the main batteries practically unnoticeable. Will ship on 30 days' trial, returnable at our expense if not satisfactory in every respect.

Write today for new descriptive circular and prices.

Burns' Telephone Bracket

NOTICE

On Sept. 5, 1905, the U. S. Patent Office issued to Oscar M. Leich the dominating patent on Selective Four-party Telephone Ringing Systems covering all present practical forms of high and low frequency systems, together with all so-called harmonic or different frequency arrangements. We are sole licensees under said patent.

SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only.
Write us for delivered prices.

Mr. Central Station Man:

Dear Sir:—We have a little instrument which **will save you** lots of trouble; it's our **combination** volt-wattmeter, for lamp testing work. It is the instrument for your man to take to **straighten out** the complaint of a troublesome customer. No doubt, on your lines you have the "chronic kicker" the same as many other Managers; a visit by your man **with this little instrument** will do more to **convince** the "chronic" he is **getting** the **individual attention** that he **thinks** he ought to have than any number of calls by your **regular** solicitors **unaccompanied** by **this** instrument. Incidentally the instrument is valuable **to you**, in showing the **exact wattage** of incandescent lamps you may be buying.

It is accurate, handsome in appearance, and in many instances **has paid for itself** in a very short space of time.

Our bulletins No. 71-H will tell you more about our portable instruments.

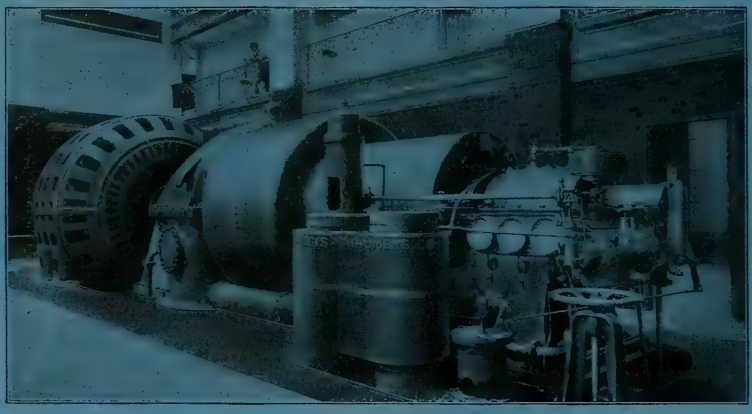
MILWAUKEE WIS U S A

Engineers and Owners of Power Plants Cannot Fail To Be Greatly Interested in the Record

Made at the Starting Up of the Allis-Chalmers Company's 5,500 K. W. Steam Turbine Generating Unit
(SHOWN BELOW)

Installed in the Williamsburg Station of the Brooklyn Rapid Transit Co.

Note the Partial Description Given Below and Then Read the More Complete Accounts Given in the "Western Electrician"



The Starting of a Large Steam Turbine Generating Unit—A Notable Record.

A large steam turbo-alternator built by the Allis-Chalmers Company has recently been started successfully under peculiar circumstances. The turbine and its direct-connected alternator were ready for operation on February 1st, but the boilers, condensing apparatus, piping, etc., were not completed until late in March.

Sudden Call for Current in Consequence of Mishap at Another Power House of the Company.

While lying idle for nearly two months in an uncompleted station, the insulation of the generator windings naturally became damp, and, therefore, as soon as steam was available for running the turbine, it was started up at part speed to dry out the generator. This drying-out process was going on when, on the morning of March 27th, a mishap at another power house left the railway company short of power. The urgency of the situation was explained to the Allis-Chalmers representatives at about 10 o'clock, and they were asked whether they could help out with the afternoon load, and it was decided to put the turbine into regular operation, notwithstanding the fact that it had never been under load, nor had it even been up to speed except when running unloaded at the West Allis shops.

Hurried Preparations for Starting the Allis-Chalmers Turbine.

Additional boilers were therefore fired up and other hurried preparations made for starting. The turbine continued to run slowly until 12 o'clock to dry out the generator. It was then shut down and the engineers proceeded with progressive tests of the insulation, testing up to such a point as they considered safe for the radiated voltage of 6,600, but not considering it wise to risk too high a test in view of the damp state of the generator.

How It Responded.

The insulation tests were completed at 1:56 p. m., and the turbine was again started up and run up to the full speed of 750 revolutions per minute for the first time since installation at the power house. At 2:20 p. m. the engineers, after carefully assuring themselves that everything was working well, reported that they were ready, and an increasing load was immediately put on, until at 3:05 the turbine was carrying a little over 3,000 kilowatts, which was all that the railway company needed at that time.

Heavy Overloads Carried.

As more load was called for it was put on, and at 3:45 p. m. the unit was carrying over 4,000 kilowatts. On the following day the load ran up to over 5,000 kilowatts, and on the succeeding day it reached 7,000 kilowatts, the turbine taking heavy loads during the morning and afternoon peaks and running until late each night.

Performance of the Generator.

Not only has the steam end of this outfit realized all the expectations of the builders, but the generator has been equally successful, carrying large overloads each day with ease.

On April 9th from five to six p. m. the load averaged about 6,000 kilowatts, and from six to seven p. m. 6,600 kilowatts, while from six to 6:30 p. m. it averaged nearly 7,700 kilowatts, with swings up to 9,300 kilowatts. On April 21st for 1½ hours the load averaged over 8,000 kilowatts, following a run at rated load, with a temperature rise of only 22° C. On April 19th a load averaging 7,500 kilowatts was carried from 5:40 to 6:40 p. m. with swings up to 9,800. One swing of 9,000 kilowatts was carried for 45 seconds and one of 9,800 kilowatts for 15 seconds, this being 78 per cent. over rated load. The highest temperature rise so far met with during any run, notwithstanding heavy overloads, is 25.5° C.

Perfect Balance of the Rotating Parts.

Points about the operation of this turbine which have attracted considerable attention are the perfect balance of the rotating parts, both of turbine and generator, resulting in a minimum of vibration, quiet operation of the generator and the remarkable coolness of the bearings.

If you want Wires or Cables insulated with the HIGHEST CLASS INDIA RUBBER INSULATION you should buy . . . . . .

HABIRSHAW

Complete stock of all sizes constantly on hand and for sale at lowest market prices by

CHICAGO EDISON COMPANY,

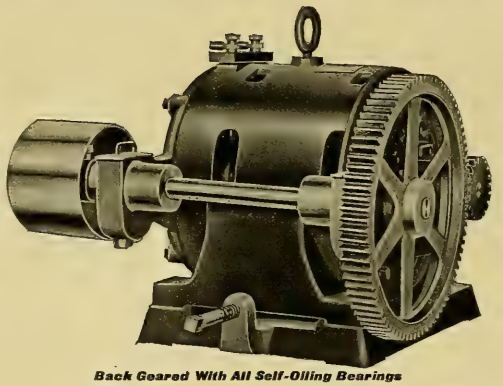
WRITE FOR PRICES. 139 ADAMS STREET, CHICAGO.

"CENTURY"

Single Phase Self-Starting Motors

Are Designed According to the Most Up-To-Date Practice
And Built of the Best Material by Expert Mechanics

Self-starting under full load. Practically noiseless in operation. Quick of acceleration. Strong mechanically and electrically. Automatic in operation. Possess an exceptionally high efficiency and power factor. Every part is finished true to gauge and is therefore interchangeable.



Back Geared With All Self-Oiling Bearings

Adapted to side wall or ceiling suspension. Well protected but well ventilated. Will stand heavy overloads for long periods.

We guarantee each and every motor to produce results satisfactory to the most exacting buyer.

All are wound for 104 or 208 volts interchangeable.

Century Electric Company

404 N. Fourth Street, St. Louis, Mo.

Stop Current Leaks

BY THE USE OF

OKONITE WIRES AND CABLES

The insulation is perfect and prevents waste—every foot of **Okonite Wire** is soaked in water for 72 hours and then subjected to the Galvanometer test and, in addition, with a dynamo current of 2,000 volts and upwards —is not affected by commercial acids or alkalies—it will not deteriorate but improves with age.

No shoddy, rags or reclaimed rubber used in their manufacture.

OKONITE TAPE
MANSON TAPE

To make a perfect insulation for wire joints, tape first with **Okonite** Rubber Tape and then with **Manson** Friction Tape.

OKONITE
TRADE MARK

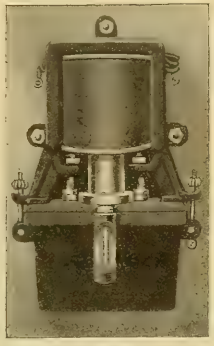
SELF STARTERS FOR A. C. MOTOR DRIVEN PUMPS AND COMPRESSORS



Cut 1. A. C. Self Starter for Small Motors

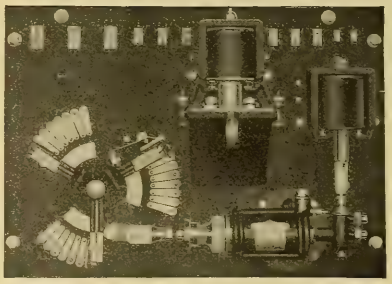
The A. C. self starters shown in the cuts can be used for either an open tank or compression tank system and automatically controlled by a float switch or pressure regulator to start and stop at the minimum and maximum quantity of water or at the two limits of pressure for which the regulator is adjusted.

Either water or air can be used to operate the device which actuates the contact lever, this device being controlled by the alternating current solenoid shown at the extreme right of cut No. 2.

The motor is started by the closing of the main line oil immersed switch shown in center of cut, which in turn closes the circuit to the motor through the resistance.

The solenoid shown on the extreme right gradually raises and admits water or air under pressure to the valve of the mechanical device at the bottom of the cut, which operates the lever, cutting out the starting resistance and bringing the motor up to speed.

When the main line switch is opened by the float switch or pressure regulator to stop the motor, the valve solenoid is de-energized, the valve is shifted to the reverse position, and the rheostat lever is returned to the starting position. By reason of an electrical interlock between the main line switch and the rheostat lever the circuit to the motor cannot be closed unless the lever is in the starting position.



Cut 2. A. C. Self Starter for Squirrel Cage Type Motor.

Bulletin 33 describes a self starter for small single, two or three phase motors, Bulletin 34 self starter for squirrel cage type motors, and Bulletin 35 self starter for slip ring type motors.

We have built a large number of A. C. controllers for various other purposes, and would be pleased to design and quote upon receipt of your requirements.

HARTFORD, CONN.

The Central Station Man's Toast

The following toast on "Meters" was recently offered at a dinner at which a number of central station owners, managers and superintendents were present.

It shows, beyond any possible doubt, the high esteem in which the Duncan meter is held, and the popularity which it enjoys.

"The Gourmet is a meat-er
Loves his viands and his wine;
And the Poet uses meter
In his verse for every line;
The Gas man has a meter
For his product volatile;
And the Waterworks a meter
For its fluid—pure or vile.
The Lover loves to meet 'er
In the pleasant summer's night;
And all use the Duncan Meter
For to measure Power and Light."

It must be admitted that the author of the foregoing displayed excellent judgment in his choice of an electric meter; and, after the banquet, he admitted that he had tried all makes of meters and found the DUNCAN the "Gibraltar" of his defense against loss of money on small load customers—by virtue of its extreme accuracy.

It's the "Meter of equity." Let us send a sample to you on 30 or 60 days' trial. This is all we ask, as the meter will do the rest.

Western Electrician, 507 Marquette Bldg., Chicago

Received From San Francisco

49 letters detailing the excellent behavior of Mississippi Wire Glass in the few buildings left standing after the great conflagration. Of the number, including the Shreve, Wells-Fargo, Telephone, Pacific States Telegraph and California Electrical Buildings, the latter was referred to in the telegram dated April 21st—to the Western Electric Co., Chicago:

"Our Building stands like a monument in a desert — saved by WIRE GLASS, watchman and water tanks."

As also in the following telegram dated 6 days later:

San Francisco, April 27th, 1906.

Mississippi Wire Glass Co., Chicago:

"Western Electric Building not damaged. Everything around it destroyed by fire. All window frames are metal with MISSISSIPPI WIRE GLASS."

Joseph F. Forderer.

Messages of similar purport were addressed us after the great conflagrations at Baltimore, Rochester, Toronto, Winnipeg, Minneapolis, etc., the following coming from Baltimore:

"Your wire glass in metal frames saved the United Electric Light and Power Company's new Transformer Station with $150,000 worth of delicate machinery and prevented the spread of fire to the West. No trace of fire in our building. All other buildings in track of fire completely destroyed."

(Signed) Parker & Thomas.

More than ten million square feet of Mississippi Wire Glass is installed for fire protection in Electrical Works and Power Stations in the United States.

Mississippi wire glass stands until the walls fall.

Samples and Printed Matter, Descriptive and Illustrative, on request

Central Station Service
going in; Private Plants coming out

As a result of the installation of our Central Station Service in buildings which formerly operated their own plants, we find it necessary to market large quantities of

Second-Hand Electrical and Steam Machinery

These machines are in excellent operating condition and are offered at very low prices. The following is a partial list. Prices on these and other sizes and types will be quoted on request.

LIST OF MACHINERY

Direct Current Generators

One 30 KW., 125 Volt, General Electric generator; Class 4; Form H; Type M. P.; 240 Amperes; Speed 1050.

One 30 KW., 120 Volt, Eddy Dynamo; 250 Amperes; Speed 900; 4 pole; compound wound.

One 50 KW, 400 Amperes, 125 Volt, Triumph Generator; Speed 615; Compound wound; Type M. P.

One 55 KW., 125 Volt, General Electric generator; Speed 875; Type M. P.

One 100 KW. double current Excelsior Electric Dynamo; 400 Amperes, 250 Volts, Speed 500, Churchward multipolar type.

One 100 KW., 500 Volt, General Electric generator; Type M. P.; Class 4,180 Amp., Speed 650.

One 250 KW., motor generator set. (One 60 cycle 4150-2400 V. Synchronous machine direct connected to one 250 V. shunt wound D. C. machine, both mounted on common cast iron base, with three bearings.)

Direct Connected D. C. Units

Three 15½x15 Ideal engines direct connected to 100 KW., 125 Volt, 800 Ampere, M. P., Westinghouse generators. Flywheel 10x60.

One 14½x12 Ball & Wood engine direct connected to one 75 KW., 125 Volt, Westinghouse generator; 265 RPM. Flywheel 13x60.

One 12x16 side crank throttling engine (made by I. & E. Greenwald), direct connected to a 12-ton Kroeschell Brothers hydro carbonic acid gas refrigerating machine.

Engines

One horizontal tandem compound McIntosh & Seymour 125 H. P. engine; cylinders 11x19 with 15-inch stroke; RPM 213.

One 13x20x15 Dick & Church horizontal tandem compound engine; shaft governor; center crank; flywheel 72x16.

One 11x22 Buckeye engine; side crank; outboard bearing; shaft governor.

One 500 H. P. tandem compound Porter Allen (Southwark) engine 20x30x24; 200 RPM; flywheel 99x26; 130 lbs. steam pressure.

One 100 H. P. central valve Williams engine; 8x12x6; three cylinders; 150 RPM; 150 lbs. steam pressure.

One 21x36 Williams horizontal tandem compound engine; 600 H. P.; 140 RPM.

One 12x24 Williams horizontal tandem compound engine; 250 H. P.

SHULTZ SABLE

Remember those two words, remember to write them in your order, and you can forget your belting troubles. Shultz Sable is a

RAWHIDE BELTING, SURFACE TANNED

by a process that is exclusively ours. The surface tanning produces a kid-like surface that clings and pulls where oak-tanned leather belting slips and burns; and the long, unbroken, unseparated rawhide fibres underneath insure the long life that makes Shultz Sable the cheapest belting you can buy, measured by length and efficiency of service.

To prove that it has 33 per cent more pulling power than any oak-tanned belt, we will send you a Shultz Sable Rawhide Belt

ON SIXTY DAYS' TRIAL

with the distinct understanding that if it disappoints you in any way, it is not to cost you a cent.

Send NOW for the Sable Booklet, and remember, in buying, that Sable Belting is BLACK.

They All Look Alike From a Distance But Get Up Close

Our No. 703
Fuseless Rosette

All fuseless rosettes look well enough from a distance, but it takes a critical examination by an expert who knows to tell what's what.

P and S No. 703 Fuseless Rosette should interest you because the price is only 4c net in any quantity and no charge is made for packing or cartage.

But besides this we want you to know the porcelain is of superior quality, and expert examination will prove we have the most indestructible rosette yet produced.

By processes all our own and unknown to others we make the finest porcelain for electrical specialties in the world.

From beginning to shipping room our porcelain specialties are closely inspected, scientifically handled every step, and when they come to you packed 10 in a paper box, the P and S way, ready for use, you can be sure they will give entire satisfaction to everyone.

This Fuseless Rosette No. 703 at 4c flat should interest you.

WRITE! WRITE!! WRITE!!!
And Learn the Merits and Details of the MUCH CONTESTED BUT VICTORIOUS
HENSEL STORAGE BATTERY
JOHN A. HENSEL & CO., 11 and 13 ELDREDGE COURT, Near Michigan Avenue CHICAGO

Regulating Battery of 280 elements, type S-617, each with a capacity of 640 amperes for one hour, installed by the Gould Storage Battery Company, in the combined Railway and Lighting Plant of the Edison Electric Illuminating Company, of Topeka, Kansas.

THE GOULD PLATE represents the highest development of storage battery invention. Its great contact surface for active material is developed out of the lead of the blank itself—not by the removal of any metal, but by our special process of "spinning" the lead into the numerous ribs.

There can be no loosening or falling out of active material and the initial capacity is preserved longer than in any other plate of the Planté type.

Mechanically, electrically and financially, the Gould Battery is an unqualified success.

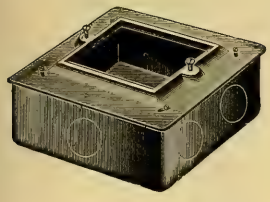
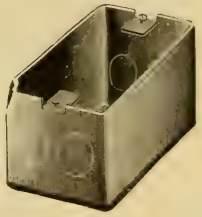
THE STORY OF Bossert Boxes

Times and conditions have changed with a marked improvement in all lines. Steel has replaced iron to a marvelous extent, especially in building material. The formerly used old-fashioned cast-iron outlet box is not what the up-to-date contractor uses. He always specifies the only drawn steel box made,

The Bossert Box





The reason is apparent. It is made of one piece of drawn steel plugged with a sufficient number of hermetically sealed outlets that can be removed with a sharp blow of a hammer, leaving a perfectly clean round hole that requires no filing or reaming. This *cannot be accomplished* with the *ordinary cast iron box.*

The time, money and worry that Bossert Boxes *save are* proof of their superiority. For further information write for Catalogue.

Meridian Units

New No. 2 GEM Meridian Unit, 100 watts, with curve of illuminating values. New No. 1 Meridian Unit—50 watts—gives one-half these values.

The Meridian Lamp with the new GEM filament and equipped with the special Holophane pagoda reflector is a very artistic form of lighting unit of high efficiency conforming to ornamental interior architecture.

Incandescent Units

No. 5 GEM Incandescent Unit, 250 watts, with curve of illuminating values—Form D reflector. Other sizes supplied.
No. 2—100 watts. No. 3—125 watts. No. 4—187 watts.

The regular Incandescent Unit is a most efficient and practical combination of GEM filament lamps with scientifically designed reflectors of the well known Holophane pagoda type. Extremely desirable for general illumination.

The metalizing or graphitizing of the filament used in these lamps employs the intense heat of the electric furnace, producing a carbon filament which in the purity of its physical composition and lighting brilliancy is suggestive of the diamond—that greatest of gems—thus giving special pertinence to the term "GEM" filament.

The first cost of GEM lighting units is about one-fifth of that of other electric lighting devices of similar size and illuminating value.

The maintenance cost comprises only the lamp renewals, which for the Incandescent units averages about one-half cent per Kilowatt hour.

The quality of light given by these units with the new GEM filament is steady and of high brilliancy, rendered soft and white by the diffusing action of the frosted globe and Holophane glass pagoda reflectors.

POSITION WANTED

As engineer and electrician in an electric light plant. Nine years' experience with high and low speed engines, dynamos, motors, wiring, line work, arc lamp repairing, boilers, pumps and almost anything connected with a plant. Am 25 years of age, have best of references and can come on 10 days' notice. Am at present in charge of a light, heat and power plant. Address Box 604, care of Western Electrician, 507 Marquette Building, Chicago.

POSITION WANTED

Chief engineer holding civil service position eight years desires a change. Fourteen years central station experience. Will accept position as chief engineer of moderate sized plant or assistant in large plant; good executive ability. Very successful in building up and maintaining plants. Not afraid of work; married, 32 years old. Sober, honest, reliable, economical. Will locate anywhere. Excellent references. Address Box 608, care of Western Electrician, 507 Marquette Bldg., Chicago.

WANTED

Incandescent Lamp Salesman. State age, experience, qualification, territory familiar with and salary expected. Address Box 599, care Western Electrician, 510 Marquette Building, Chicago.

WANTED

Several young men to plan telephone toll line and cable construction. Preference will be given to men with good electrical educations. The work is located in western part of Pennsylvania. Necessary expenses paid when out of town. No applications considered unless age and salary expected are stated. Address Box 603, care of Western Electrician, 507 Marquette Bldg., Chicago.

WANTED

Experienced armature winder wanted for permanent position, with an electrical manufacturing company in Minnesota. A first-class plant to work and good pay. Address Box 607, care of Western Electrician, 507 Marquette Bldg., Chicago.

WANTED

A man to take charge of armature room, electrical repair shop. Must understand alternating and direct current. First-class references are required. Address Box 605, care of Western Electrician, 507 Marquette Building, Chicago.

TO DEALERS AND EVERYBODY

SEND FOR THE

Edison Battery Books

If you use primary batteries for any purpose, as sparking a gas engine, driving a fan motor, operating an X-ray outfit, wireless telegraphy, small fan motors, surgeon's cautery outfits, dentists' exploration lamps, penny-in-the-slot machines, or what not, there is only one cheapest form of battery energy, the **Edison Cell.** Two ampere hours cost one-half cent or less.

The **Edison Cell** is the lighest form of battery energy. It "has a capacity of work per unit weight greater than any other, either primary or secondary." The energy of an **Edison Cell** applied through a perfect motor would raise the cell 16.17 miles.

The **Edison Primary Battery** gives rise to no fumes, the liquid does not corrode machinery, there is no creeping of salts and the cells do not freeze in ordinary cold weather nor dry out in hot weather.

The **Edison Cell** differs from others in being absolutely non-polarizing. The voltage and current keep up until the end of its guaranteed life, whether consumption is slow or fast. There is no "fagging," and no "resting" is required.

The **Edison Cell** is distinguished from other caustic-potash batteries by having the copper dioxide compressed into briquettes. Prof. Carhart says of this method of construction: "Recognizing the good qualities of copper dioxide as a depolarizer, Edison has designed a form to meet the objections (to loose oxide). The copper oxide is employed in the forces of a compressed slab which, with its connecting copper support, serves also as the negative plate. In recent cells the device has been resorted to of reducing a superficial film of copper on the oxide."

The **Edison Spark Coil** differs from others in being wound with heavier and shorter wire and in transferring a larger proportion of the battery energy to the spark. It is the heat of the spark that fires a mixture of gas and air, not the voltage. The low voltage make-and-break arc is more effective and less troublesome than the high-voltage jump-spark.

Write for Battery Book "WE" and also Battery Sparks. Dealers should ask for a supply.

12c LAMP!

JUST THE LAMP FOR SUMMER RESORTS, PARKS, SUMMER DANCE HALLS, PAVILIONS, "WHITE CITIES", ETC.

From you, "Mr. Consumer," we will accept in exchange a quantity of burned-out lamps equal to the number of lamps you order from us, and allow you a credit of one cent each, f. o. b. our factory; we deliver our lamps to you **free** when ordered in standard package lots to all points on or east of the Mississippi River.

Think of it, "Mr. Consumer," you would not throw away your watch because you broke the main-spring; remember, the filament of a lamp bears the same relation to the lamp that the main-spring does to the watch, and why throw away burned-out lamps that only need a new filament to be as good as new?

Therefore, why pay 17c or 18c for other lamps when the "Economy" would cost you but 12c—11c in fact, providing you send your old lamps for credit?

You get just as good a lamp as a "brand new" one, and it gives you just as much light. It burns just as long. There is no difference EXCEPT IN YOUR FAVOR, and that is WORTH 6c PER LAMP.

Burned-Out Lamps Only Bought From Consumers

COLONIAL LAMPS

FOR

MINING PLANTS

ST. RAILWAYS

NOTICE!

Mining engineers all recognize the essentials of an incandescent lamp for mines—**IT MUST BE IN ALL SENSES MOISTURE PROOF AND RELIABLE**—in no other lamp is good workmanship so all essential. In a mine one cannot afford to take chances—you take no chances with the "Colonial;" and then there is our Colonial **ST. RAILWAY LAMP—ITS FILAMENTS DO NOT DROOP WHEN THE COLONIAL IS SET AT AN ANGLE**—and remember that **BIG CHICAGO STOCK AT**

PORTER & BERG'S

303 DEARBORN ST.

Remember, too, every Colonial St. Railway lamp runs of even voltage and efficiency. Put your 4 or 5 lamps in a series and you'll see they are of the same candle power exactly.

COLONIAL ELECTRIC CO., WARREN, OHIO

An incandescent lamp is a composite term—it may mean anything. The Buckeye Electric Co. manufactures scores of different types, each adapted to a different utility, although there is but one Buckeye quality.

BETTER BUY BUCKEYE

THE QUESTION

16 C. P., 40 to 130-Volt Ed. Base

AN ORDINARY
ANCHORED FILAMENT LAMP

Just the same as lamps were when they were first made. No better or no worse. This lamp is bought by people who are always satisfied and don't want to try anything new.

Are you satisfied with 7 candle-power where the best illumination is required, and 16 candle-power where it is not utilized? If not, a mental calculation will prove to you that it is best to change lamps.

If you were to actually waste half your coal you would stop it at once. Why don't you stop wasting half your light?

A SHELBY
USEFUL LIGHT LAMP

Made to fulfill modern requirements. It can be used in the regular fixture and delivers 14 candle-power below or 100 per cent more light in useful directions, at the same time delivering 16 candle-power horizontally. It distributes the light on the object you want to see (below the lamp).

SHELBY LAMPS are without exception the only lamps that are not copies of other designs—this is not guesswork, but a matter of fact, and we can prove it. They not only give the most useful light, but give it for the longest time.

☞As long as they last (we have but a few copies of each) we will send them to you ABSOLUTELY FREE to the amount of 50 per cent of your purchases of other books—that is, books not included in the above list. For example, if you send $5.00 for the famous Hand-Book Series, namely, New Dynamo Tenders' Hand-Book, Bell Hangers' Hand-Book, Incandescent Wiring Hand-Book, Electric Transmission Hand-Book and Telephone Hand-Book, we will allow you to select from the list of shelf-worn books to the amount of $2.50 **list prices.**

Or we will fill your orders for any of these books at the sale prices given.

You would better send your orders early thereby gaining the advantage of a first choice.

The Safest Job

Is the result of using "Peru" Cleat-Tie Buttons, a cleat and tie button combined. National Code Standard, and approved by your city inspector.

"Peru" Cleat-Tie Button

Saves a pair of cleats, two screws, and half the time in wiring, and guarantees the neatest and safest job, passing every inspection. Specify "Peru" to your jobber or order direct.

PERU ELECTRIC MFG. CO., Peru, Indiana

What's the Reason?

Without cause there's no effect.
Nothing happens without reason.
Then, when an electrical supply house at the end of its first year's business finds itself obliged to move into quarters three times as large as the old ones in order to properly fill its orders,—then what would you give as the reason?
This is what happened in our case.
We'll leave the answer to you.

IF ELECTRICAL AND GOOD WE SELL IT

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER
Preface
I The Electric Current
II The Electric Battery
III The Effects of Electric Flow in the Circuit—Heat and Chemical Action
IV The Effects of Electric Flow Outside the Circuit—Magnetism and Induction—The Electrical Units
V Electromagnets—The Telegraph
VI Electric Signaling Apparatus
VII The Relations Between Magnets and Electric Currents
VIII Induction and Reactive Coils
IX The Telephone
X Telephone Accessories
XI The Mechanical Generation of Electricity
XII The Dynamo Machine
XIII Various Types of Dynamo Machines
XIV Alternators—Polyphase Currents
XV The Electric Motor
XVI The Electric Railway
XVII Polyphase Currents and Motors
XVIII Electrical Power Transmission
XIX The Incandescent Light
XX The Arc Light
XXI Electrochemistry—Storage Batteries
XXII Wireless Telegraphy
XXIII Radiation—X-Rays
XXIV Recent Theories

ELECTRICIAN PUBLISHING CO.
507 MARQUETTE BLDG., CHICAGO

Tenth Edition. Just Published.

ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. Fully Illustrated. PRICE, $1.00

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar. CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity. CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Current. CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory. CHAPTER VI. Electromagnetic Induction and Action of Currents Upon Each Other; The Induction Coil and Its Application. CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries. CHAPTER VIII. Dynamos; Motors; Transmission of Power. CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.

Sixteenth Edition. Just Published.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mills. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. 393 Illustrations. PRICE, $3.00

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. Just Published.

ELECTRIC TOY MAKING

DYNAMO BUILDING and ELECTRIC MOTOR CONSTRUCTION

By PROF. T. O'CONOR SLOANE

185 Pages. Very Fully Illustrated. PRICE, $1.00.

Contents

CHAPTER I. Batteries. CHAPTER II. Permanent Magnets. CHAPTER III. Electro-Magnets. CHAPTER IV. Electric Motors. CHAPTER V. Electric Bells. CHAPTER VI. Miscellaneous Toys. CHAPTER VII. Spark and Induction Coils, and Allied Subjects. CHAPTER VIII. Hand-Power Dynamo. CHAPTER IX. Miscellaneous Receipts and Formulæ.

Twelfth Edition. Just Published.

How to Become a Successful ELECTRICIAN

By PROF. T. O'CONOR SLOANE

200 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Mathematics, CHAPTER III. Physics. CHAPTER IV. Chemistry. CHAPTER V. Electricity at Home. CHAPTER VI. Mechanical Engineering. CHAPTER VII. Drawing. CHAPTER VIII. Teachers. CHAPTER IX. Electrical Factory Work for Students, CHAPTER X. College Education. CHAPTER XI. Steam Engineering CHAPTER XII. The Manufacturing Engineer. CHAPTER XIII. The Constructing Engineer. CHAPTER XIV. The Station Engineer. CHAPTER XV. Inventing. CHAPTER XVI. Original Investigation. CHAPTER XVII Success. CHAPTER XVIII. Reading. CHAPTER XIX. Ethics.

HARTFORD STEAM BOILER INSPECTION & INSURANCE COMPANY

39th ANNUAL STATEMENT

JANUARY 1, 1906

CAPITAL	$ 500,000.00
SURPLUS	1,261,459.69
RESERVES	1,926,686.81
ASSETS	3,688,146.50

The **Hartford** is the only company which makes a specialty of, and does exclusively, a steam boiler inspection and insurance business.

The **Hartford** is the only company whose entire talent and energies are applied to the study of steam, to the scientific construction and installation of boilers, and to their periodical inspection by expert mechanics.

The **Hartford** is the only company whose entire assets and resources are held exclusively for the protection of steam users, and the payment of losses occasioned by the explosion of steam boilers, and for no other hazard whatsoever.

The **Hartford** is now doing nearly nine-tenths of the Inspection and Insurance of Steam Boilers in the New England States, and nearly two-thirds of the entire amount done throughout the United States.

Dixon's Solid Belt Dressing will keep your belts in good condition and prevent all slipping. Sample on request.

OTTO ENGINES

Bought in 1895—Been Running Constantly

OTTO OTTO

The Naugatuck News, Naugatuck, Conn., writing for supplies incidentally remarks: "The engine has been a fine one, in fact the best investment we ever made." Surely a splendid tribute to pay to a piece of machinery. "OTTO" design, "OTTO" materials and "OTTO" workmanship combine to make "OTTO" excellence. "OTTO" engines can never be "cheap," yet are always the CHEAPEST.

OTTO GAS ENGINE WORKS, Phila, Pa.

Reduced Telephone Rates
IN CHICAGO

If the franchise of Chicago Telephone Company in the City of Chicago is extended, the following rates have been proposed for the Chicago Exchange.

SINGLE LINE TELEPHONES:

50 calls per month : :	$5.00
Next additional 50 calls in the month	5 cents each
Third 50 calls in the month : :	4 cents each
All calls in the month beyond 150 :	3 cents each

RESIDENCE RATES WITH UNLIMITED SERVICE:

Single line : : : :	$75.00 per annum
Two-party line : : :	60.00 per annum

NICKEL SERVICE:

Direct line, 20 cents per day, including 4 calls
Direct line, 15 cents per day, including 2 calls
Two-party line, 15 cents per day, including 3 calls
Two-party line, 10 cents per day, including 1 call
Two-party line, residences only, 10 cents per day
Four-party line, residences only, 5 cents per day
Extension telephones : : : $1.00 per month

CHICAGO TELEPHONE COMPANY,
203 Washington Street, Chicago.

WHAT'S WRONG
with that TELEPHONE INVESTMENT of yours?

Why doesn't it pay you as well as the best of your investments?
Is the reason bad management or bad equipment? More likely the latter.
Probably the company is trying to do a 20th Century business with 10th Century apparatus.
If that's the case, it is spending more and earning less than it might if it had our Automatic Telephone equipment.
This is the only really modern telephone system. It produces the ideal telephone service—quick, sure and secret—at half the operating expense of a manual equipment, and this service commands better rates.
It costs a fixed price per hundred lines to enlarge the automatic exchange, instead of an increased price per each hundred lines, as in the manual equipment.
The automatic exchange is never outgrown; it never has to be "scrapped" and replaced by a complete new one, as with the manual. You just add to it as you do to a sectional bookcase.
All these points bear upon the stability and value of your telephone securities. They mean dividends to you.
Over ninety per cent of all the large orders placed during the past few years, either for new installations or replacements, have been for our automatic system, and all the companies adopting it have, from the increased earnings, been able to pay the interest on their bonds and a good dividend on their stock.
Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.	Florenceville, N. B., Can.	Perry, N. Y.
Akron, Ohio.	Grand Rapids, Mich.	Portland, Me.
Albuquerque, N. M.	Hastings, Neb.	Portland, Ore.
Allentown, Pa.	Havana, Cuba.	Princeton, N. J.
Auburn, Me.	Hazleton, Pa.	Riverside, Cal.
Auburn, N. Y.	Hopkinsville, Ky.	San Diego, Cal.
Battle Creek, Mich.	Jonesboro, Ark.	Santa Monica, Cal.
Bellingham, Wash.	Lake Benton, Minn.	Sawtelle, Cal.
Berlin, Germany.	Lewiston, Me.	Sioux City, Iowa.
Buxton, Iowa.	Lincoln, Neb.	South Bend, Ind.
Cadillac, Mich.	Los Angeles, Cal.	St. Marys, Ohio.
Chicago, Ill.	Manchester, Iowa.	Tacoma, Wash.
Clayton, Mo.	Marianao, Cuba.	Toronto Jct., Can.
Cleburne, Texas.	Medford, Wis.	Traverse City, Mich.
Columbus, Ga.	Miamisburg, Ohio.	Van Wert, Ohio.
Columbus, Ohio.	Mount Olive, Ill.	Watch Hill, R. I.
Dayton, Ohio.	New Bedford, Mass.	Wausau, Wis.
El Paso, Texas.	Oakland, Cal.	Westerly, R. I.
Fall River, Mass.	Ocean Park, Cal.	Wilmington, Del.
Ferguson, Mo.	Pentwater, Mich.	Yuma, Arizona.

KELLOGG MICHIGAN WHITE CEDAR POLES

SEND FOR POLE BOOK

The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only.
Write us for delivered prices.

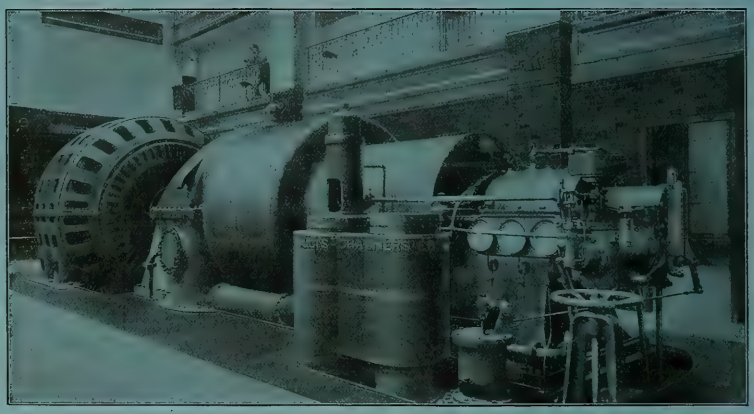
ALLIS-CHALMERS CO
MILWAUKEE WIS U S A

Engineers and Owners of Power Plants Cannot Fail To Be Greatly Interested in the Record

Made at the Starting Up of the Allis-Chalmers Company's 5,500 K. W. Steam Turbine Generating Unit
(SHOWN BELOW)

Installed in the Williamsburg Station of the Brooklyn Rapid Transit Co.

Note the Partial Description Given Below and Then Read the More Complete Accounts Given in the "Western Electrician"



The Starting of a Large Steam Turbine Generating Unit—A Notable Record.

A large steam turbo-alternator built by the Allis-Chalmers Company has recently been started successfully under peculiar circumstances. The turbine and its direct-connected alternator were ready for operation on February 1st, but the boilers, condensing apparatus, piping, etc., were not completed until late in March.

Sudden Call for Current in Consequence of Mishap at Another Power House of the Company.

While lying idle for nearly two months in an uncompleted station, the insulation of the generator windings naturally became damp, and, therefore, as soon as steam was available for running the turbine, it was started up at part speed to dry out the generator. This drying-out process was going on when, on the morning of March 27th, a mishap at another power house left the railway company short of power. The urgency of the situation was explained to the Allis-Chalmers representatives at about 10 o'clock, and they were asked whether they could help out with the afternoon load, and it was decided to put the turbine into regular operation, notwithstanding the fact that it had never been under load, nor had it even been up to speed except when running unloaded at the West Allis shops.

Hurried Preparations for Starting the Allis-Chalmers Turbine.

Additional boilers were therefore fired up and other hurried preparations made for starting. The turbine continued to run slowly until 12 o'clock to dry out the generator. It was then shut down and the engineers proceeded with progressive tests of the insulation, testing up to such a point as they considered safe for the radiated voltage of 6,600, but not considering it wise to risk too high a test in view of the damp state of the generator.

How It Responded.

The insulation tests were completed at 1:56 p. m., and the turbine was again started up and run up to the full speed of 750 revolutions per minute for the first time since installation at the power house. At 2:20 p. m. the engineers, after carefully assuring themselves that everything was working well, reported that they were ready, and an increasing load was immediately put on, until at 3:05 the turbine was carrying a little over 3,000 kilowatts, which was all that the railway company needed at that time.

Heavy Overloads Carried.

As more load was called for it was put on, and at 3:45 p. m. the unit was carrying over 4,000 kilowatts. On the following day the load ran up to over 5,000 kilowatts, and on the succeeding day it reached 7,000 kilowatts, the turbine taking heavy loads during the morning and afternoon peaks and running until late each night.

Performance of the Generator.

Not only has the steam end of this outfit realized all the expectations of the builders, but the generator has been equally successful, carrying large overloads each day with ease.

On April 9th from five to six p. m. the load averaged about 6,000 kilowatts, and from six to seven p. m. 6,600 kilowatts, while from six to 6:30 p. m. it averaged nearly 7,700 kilowatts, with swings up to 9,300 kilowatts. On April 21st for 1½ hours the load averaged over 8,000 kilowatts, following a run at rated load, with a temperature rise of only 22° C. On April 19th a load averaging 7,500 kilowatts was carried from 5:40 to 6:40 p. m. with swings up to 9,800. One swing of 9,000 kilowatts was carried for 45 seconds and one of 9,800 kilowatts for 15 seconds, this being 78 per cent. over rated load. The highest temperature rise so far met with during any run, notwithstanding heavy overloads, is 25.5° C.

Perfect Balance of the Rotating Parts.

Points about the operation of this turbine which have attracted considerable attention are the perfect balance of the rotating parts, both of turbine and generator, resulting in a minimum of vibration, quiet operation of the generator and the remarkable coolness of the bearings.

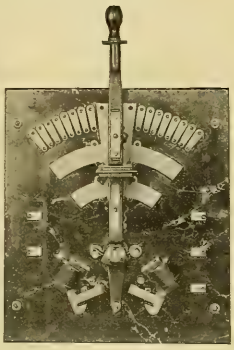
ALWAYS IN STOCK

MANUFACTURED BY

G. I. Co.

CHICAGO EDISON COMPANY, 139 Adams Street, CHICAGO.

Full Reverse Motor Starter



This type of starter is adapted to start and operate a motor at full speed in either direction and is especially designed for use with direct connected machine tools, such as lathes and planers.

At full speed position the lever is retained by one of the magnets. In case of failure of current the magnet will release the lever and the spring will return it to the "off" position.

Bulletin 12 gives prices.

For New and Old Work

UNION OUTLET

COMBINATION SWITCH BOX

PATENTS PENDING

Approved by the Underwriters National Electrical Association.
Takes all Standard Switches and Receptacles.

Designed so that a **two-gang** box can be converted into any number of gangs by releasing the clamping screws and inserting "Spacers." These gangs are easily assembled with the aid of a screw-driver, and fit together snugly, making a perfect and solid gang box for any required number of switches.

"Ribbons Show Which Way the Wind Blows"

You Get the AIR, but NOT the Direct DRAFT

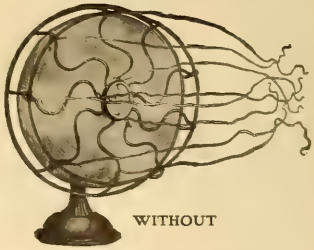
WITH

From the Electric Fan that is equipped with the D'Olier Air Deflector.

MADE IN TWO SIZES

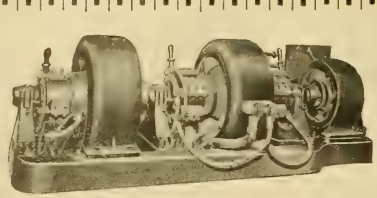
For 12-inch Guard, - $1.50 each
For 16-inch Guard, - $2.50 each

You can attach them to the Fan Guards with no trouble whatever. Simple. Neat. And last the life of the Fan. They keep the Air Circulating throughout the entire room.



WITHOUT

HENRY D'OLIER, JR., COMPANY, 119-121 South Eleventh Street, Philadelphia, Pa.



We are prepared to undertake the installation of storage batteries under all conditions.

A Gould Storage Battery is now regulating the load on a 13,200 Volt, 25 Cycle Alternator at Rutland, Vt. (Chittenden Power Co.). This is the only case on record of storage battery regulation of alternating current. We accomplished it by means of a Gould Counter Electro-Motive-Force Booster-Regulator. This is unquestionably the only booster on the market with which this result could have been brought about.

We shall be glad to give our best attention to the inquiries of all interested.

THE ELECTRO-CHEMICAL TRAY BATTERY

Important point— **no "choking" gas**
Made up in "tray form," hence for a battery of a voltage of 110, one stack would only stand **about 30 inches high.** Many other **good novel points—investigate it.**

SMITH STORAGE BATTERY CO., - - Zoar, O.

Sold by electrical supply houses

THE "BABY" TORCH

Burns Without Air Pressure

THE "Baby" Gasoline Torch is the smallest torch made which gives perfect results, and fills the long-felt want for a torch which fits the hand and can be used in contracted places and corners. It can be turned in any position, as it burns equally well in all positions. It is perfectly automatic; has no cocks or valves to get out of order; lights with a match; self-feeding; requires no pumping of air and is always ready for use. It is indispensable to the Telephone and Telegraph linemen and **ELECTRICIANS.** It burns about two hours from one filling.

ZEIDLER LAMP & BRASS CO., LOMIRA, WISCONSIN

Novelty Potheads and Sleeves at Cut Prices

The ease, simplicity and speed with which they may be installed, their readiness for constant and instant removal, their sureness of staying waterproof after inspection the same as before, and the unusual way in which they are constructed, combined with the quality of the material used in their making (best selected brass), specially adapts them to fill all your wants, and our prices are reduced. Get them.

The Strength of our POLE STEPS Means Safety to Your Men

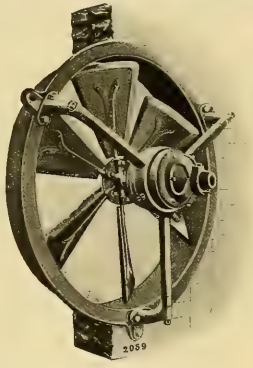
Single Phase Direct Connected

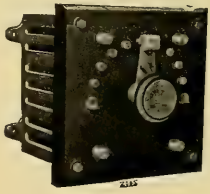
VENTILATING FANS

With Auto Transformer Control

The Fan illustrated is used with our Single Phase Alternating Current Motor, and is designed to be used in connection with our Auto-Controller.



We are prepared to furnish these Auto Transformer Speed Regulators with Single Phase Variable Speed Motors in sizes from one-quarter horsepower up to two horsepower.



We also make Constant and Variable Speed Motors, with Belted Fans of the Bracket Type.

The Auto Controlling device consists of a single coil transformer, a number of taps being brought out to a small switching and terminal head, all being mounted in a neat case. This method of motor speed control makes a large saving in the cost of current over that of straight resistance control such as is used on almost all direct current outfits.

Size Motor H. P. at Full Speed.	Maximum Speed.	Speed Variation.	Cubic Feet Free Air Per Minute (Approx.) Full Speed.	Size Fan.
¼ H. P.	1,165	⅛ to Full	1,500	12-inch
½ H. P.	1,165	"	4,700	18-inch
1 H. P.	1,165	"	9,200	24-inch
2 H. P.	1,165	"	15,500	30-inch

CREATING A "WIDE-OPEN" LAMP MARKET!

LOOK FOR THE PATENT PROTECTION LABEL ON THE BASE

IF AN "ORGANIZATION" (OR "TRUST") WITH SOME 26 TO 30 OR SO FACTORIES (SOME ON VERY EXPENSIVE GROUND AND PAYING HIGH FOR FACILITIES) CAN MAKE BIG MONEY AT "16d TO 18d PER", IS IT NOT VERY REASONABLE TO SUPPOSE THAT ONE MODERATELY LARGE PLANT (LIKE OURS), BACKED BY AN EFFICIENT BUT COMPARATIVELY INEXPENSIVE SELLING STAFF, LOCATED AS IT IS IN A VERY SMALL TOWN WITH GROUND AND BUILDING COSTING, COMPARATIVELY, LITTLE OR NOTHING, WITH THE BULK OF OUR MONEY IN STRICTLY UP-TO-DATE NEW LAMP MACHINERY, THAT IS RUN BY MEN WHO "KNOW HOW" — THINK OF ALL THIS; AND PUT ON TOP OF IT THE REMEMBRANCE OF THE VAST MONEY IT COSTS TO MAINTAIN THE "ORGANIZATION'S" HUGE RED TAPE-SELLING-SYSTEM WITH ITS ARMY OF "MANAGERS" AND "COMPETING (AGAIN SAVE THE WORD!) SALESMEN — THINK OF ALL THIS — "WEIGH IT" IN COLD BLOOD IN THE BALANCE OF COMMON SENSE" — AND YOU'LL WRITE THEN TO ST. MARYS, PA. FOR "FURTHER INFORMATION" ON HOW WE'RE CREATING A "WIDE-OPEN" MARKET FOR YOUR, AND OUR (MUTUAL), BENEFIT.

Electricity Meters

Their Construction and Management

A Thoroughly Practical Manual for Central Station Engineers, Distributing Engineers and Students

BY

C. H. W. GERHARDI

This valuable Practical Manual on the Management of Electricity Meters, which will form a volume in "THE ELECTRICIAN" Series, will be ready next week. The Author has had many years' exceptional experience with Electricity Meters in connection with the Meter Department of the largest electricity supply undertaking in the Kingdom. Mr. Gerhardi's intimate acquaintance with the working of all existing meters on the market and with the details of their construction and management is a guarantee that the book will meet the requirements of those engaged in work in which the Electricity Meter forms an essential part. In the division of the book devoted to "Testing" Mr. Gerhardi's unique experience will prove of the greatest service to supply station engineers and managers.

Very full Chapters on TESTING, and PRACTICAL HINTS to METER INSPECTORS, ETC.

8vo, Cloth, 291 Pages, 178 Illustrations — *Price $2.50 Net*

Alternating Currents

Their Theory, Generation and Transformation

BY

ALFRED HAY, D.Sc., M.I.E.E.

EXTRACT FROM PREFACE

In the following pages, an attempt is made to furnish the reader with a general account of the principles, construction, and use of alternate-current measuring instruments, generators-motors and transforming machinery. Special attention is devoted to methods of testing. The first three chapters contain a sketch of alternate-current theory. The author has tried, as far as possible, to exclude everything of purely academic or historical interest; on the other hand, he has not hesitated to devote a good deal of space to matters which are either not generally understood, or which are of too recent origin to have found their way into many text-books.

CONTENTS.

Alternating Currents. Frequency and Wave Shape. Form, Factor and Amplitude Factor. Series Arrangement of Impedances. Polyphase Currents. Theory of the Wattmeter. Effect of Self-Inductance. General Conditions to be Satisfied by Alternate Current Instruments. The Dynamo Used as an Alternator. Transformers. Ratio of Transformation. Induction Motors. Squirrel Cage Instruments. Alternator Used as a Motor Synchronism. Regulation of Alternators and Transformers. Resistance Measurements of Alternating Current Machinery. Assumption Underlying Approximate Theory of Induction Motors. Experimental Data Required for Construction of Circle Diagram. Determination of Hysteresis Loss. Generator Action of Induction Motor at Hypersynchronous Speed. Phase Relation of Stator and Rotor Currents. Rotary Converters and Their Uses. Compensated Motor. Index.

NINTH EDITION REVISED

SIR DAVID SALOMONS, Bart., M.A.

EXTRACT FROM PREFACE

This book aims at filling a gap which, in practical scientific literature, is very noticeable. It presents to the reader a general survey of the practice of Electric Lighting and Management of Accumulators, with such recommendations as are likely to assist him in obtaining successful results.

The writer feels confident that the directions here laid down, if carefully followed, will prove of great service, so that professional advice will very rarely be required. In fact, this little book is the outcome of years of labor, and of an almost countless number of experiments, undertaken without considering trouble or cost; for solely in this manner can reliable results be obtained. Only those types of cells largely in practical use are dealt with. The many other types that exist would be more properly described in a history on the subject, which this little treatise is not intended to be.

CONTENTS.

Introduction. Index of Terms. Description of Cells and their Mode of Employment. Setting up the Cells and the Accumulator House. Charging—Storage Capacity of Various Cells—Weight per h.p.-hour Capacity of Various Accumulators. Discharging. Failures; their Causes and Remedies. Testing a Section. Summary. Index.

NEW YORK CITY
J. B. OLSON, Manager of Sales

IN OUR OWN BUILDING

IN announcing the completion and occupancy of our own building at 17 Park Place, through to 14 Murray Street, we are particularly gratified to invite our friends and patrons to an

Electrical Supply House

which, in every way, is the most modern and best stocked establishment of the kind in the country. In arranging our new quarters, we have, in many instances, departed from traditional and round-about methods and introduced innovations which will promote mutual business interests. YOU are personally invited to call and look us over at your earliest convenience.

Manhattan quality and prices will be more strongly upheld than at any previous period in our 18-year career. Our large 750 page catalog of Something Electrical for Everybody will be sent free to any buyer or user of electrical supplies who does not already have the book.

Manhattan Electrical Supply Co.

17 Park Place thro' to 14 Murray Street

Western Office and Salesrooms 186-188 Fifth Ave., Chicago — New York — Factories Jersey City, N. J. Ravenna, Ohio

There's No Friction

with the Fibre-Graphite Commutator Brush.

Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

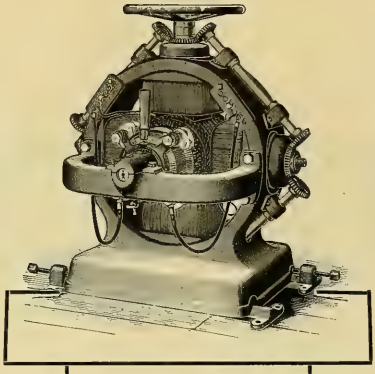
Every step that leads to perfection

has been taken in producing the

Stow Multi-Speed Motor

The only motor that fills every requirement of variable speed motor drive.



The only motor with which any conceivable speed within a wide range is obtainable.

Nothing to get out of order.

No controller or controlling resistances.

Constant and high efficiency at all speeds.

Steadiness of speed under load changes.

Only one voltage required to operate.

No auxiliary wiring or machinery.

Full rated H. P. capacity at all speeds.

Any imaginable speed within a very wide range.

Speed adjustable to a fraction of a revolution by turning hand wheel.

Speed variable from 100 to 500 per cent at practically constant efficiency.

Speed changes are not made by jumps or steps, but by a steady gliding process, which permits securing any speed to a fraction of a revolution.

Commutation is sparkless, and the speed, once set, is constant under all loads or load changes.

May we not send you our catalog?

A BOOK YOU SHOULD HAVE

Electric Power Plants

BY NORMAN H. SCHNEIDER.

A book every steam and electrical engineer should have because it deals practically with the care and management of power plants; direct and alternating current motors have been given a special chapter and modern forms of starting rheostats are described at length. There are special chapters on the electrical current, standard wiring with formulas and tables, etc., direct and alternating current dynamos, motors and motor starters, testing electric lamps and dynamos and measuring instruments, storage batteries, engineering notes, belts, pulleys, horsepower, etc.

290 PAGES, 203 ILLUSTRATIONS.

Full Limp Leather, Round Corners, Gilt Edges, $2.50. Cloth, $1.50.

SPON & CHAMBERLAIN

Department W E, 123-125 Liberty Street, NEW YORK

A BATTERY INVESTIGATION

Guaranteed to excel any battery in the market, the

ROCK ISLAND NEW PATENT DRY CELL

challenges investigation. It does not crystallize, dry up or freeze, and possesses the greatest recuperative powers of any battery ever made. Indorsed by the leading telephone companies, telephone, gas and gasoline engine and automobile manufacturers—we could summon an army of witnesses to prove the

EXCLUSIVE MERIT

to be found only in the Rock Island. Its trademark is a synonym for **all** that is best in a dry cell battery. **Heaviest** zinc, **highest** voltage, **greatest** current capacity and **longest** life are combined in the Rock Island.

Our Standard No. 8 is the best battery for higher class work. Standard No. 6 is the regular size for general purposes.

Department **A** will be glad to quote you prices.

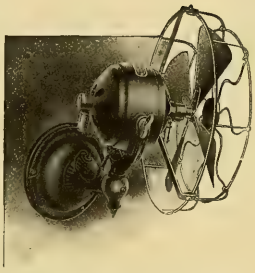
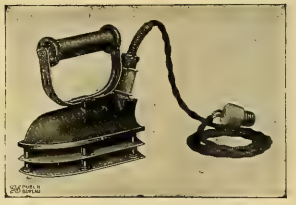
Fan Motors and Flat-irons

For Cooling and Heating Purposes



Twelve-Inch Direct Current Wall Fan



Six-Pound Flat-iron for General Household Use. Aluminum, Bronze or Nickel Finish

G. E. Fan Motors

For 1906 are noted for their electrical and mechanical improvements; efficiency, speed control, reliability and breeze without noise.

This company furnishes a most complete line, comprising desk, wall bracket, ceiling and telephone booth fans and ventilating outfits for alternating as well as direct current.

Motors can be supplied for various voltages and frequencies to meet every requirement.

The G. E. Flat-iron

The iron that stays hot under the hardest work because the heat flows rapidly to the work and not into the air. Designed for efficient heat transmission.

Connection—a porcelain detachable plug with substantial contacts. Six-Pound Flat-irons for general work; smaller ones for the sewing-room and travelers.

Always clean, convenient and inexpensive.

Central Station Managers recognize that G. E. fan motors and heating devices will increase their sales of current during light load periods of the day.

Perfect construction in connection with proper electrical design give the G. E. fan motors and heating devices the foremost place in the list of electric devices for the household and office.

Your stock will be incomplete unless G. E. Fan Motors and Heating Devices are included

Curtis Turbines

Require Little Floor Space and Foundations

This is well demonstrated in the above illustration.

The engine driven units of 2,750 kilowatt capacity each fill the width of the room, while two Curtis turbine generators of combined capacity of 4,500 kilowatts leave plenty of floor space available.

The foundation for the second turbine (3,000 Kw.) about to be installed is in marked contrast with the heavy and expensive construction beneath each engine.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER	
	Preface
I	The Electric Current
II	The Electric Battery
III	The Effects of Electric Flow in the Circuit—Heat and Chemical Action
IV	The Effects of Electric Flow Outside the Circuit—Magnetism and Induction—The Electrical Units
V	Electromagnets—The Telegraph
VI	Electric Signaling Apparatus
VII	The Relations Between Magnets and Electric Currents
VIII	Induction and Reactive Coils
IX	The Telephone
X	Telephone Accessories
XI	The Mechanical Generation of Electricity
XII	The Dynamo Machine
XIII	Various Types of Dynamo Machines
XIV	Alternators—Polyphase Currents
XV	The Electric Motor
XVI	The Electric Railway
XVII	Polyphase Currents and Motors
XVIII	Electrical Power Transmission
XIX	The Incandescent Light
XX	The Arc Light
XXI	Electrochemistry—Storage Batteries
XXII	Wireless Telegraphy
XXIII	Radiation—X-Rays
XXIV	Recent Theories

Stanley-G.I. Type "K" Enclosed Arc Lamps

Burn 200 Hours
Without Retrimming

Type "K" Enclosed Arc Lamp

Are of the double rod construction, the latest development in arc lamp design.
The shell is made in one piece, steel, copper or brass, and possesses great strength. The top is punched and drawn from ⅛-in. cold steel and cannot be broken. All parts are made to gauge and are interchangeable.

No Cotton, Rubber or Asbestos Insulation

We have had fifteen years' experience in the Business of manufacturing Arc Lights and Accessories

Electric Power in Factories

THE use of Electric Motors with current from the Central Station is rapidly becoming recognized as the best modern practice in Factory Operation. :: :: :: :: Individual and group drive have demonstrated an unquestioned saving in cost of operation as compared with the antiquated and inefficient system of shafts and belts formerly in vogue. :: :: :; ¶The user of Central Station Service has the greatest guarantee of reliability and efficiency possible. Coal and labor troubles are eliminated as are all the petty annoyances attendant upon the operation of a private power plant. :: :: :: ¶Increased output, with equal or less operating costs, should be an attractive proposition. If you are located in Philadelphia we can sell you Electric power for less money than it costs you to generate it. :: :: :: :: :: :: ¶We make all the preliminary tests and estimates free of charge, and you will be under no obligation, direct or implied. :: :: :: :: ::

A LIBRARY OF WELL SELECTED ELECTRICAL BOOKS

Is of inestimable value to electricians. Such a library is best formed by occasional and carefully chosen purchases. ELECTRICIAN PUB. CO., 507 Marquette Building, Chicago.

DON'T THINK

That you can keep posted as to what is going on in the western electrical field without reading the **Western Electrician.** It is **the electrical newspaper,** and if you are not a subscriber you will find it to your advantage to become one at once.

$3.00 per year;
$1.50 for six months.

ELECTRICIAN PUBLISHING CO.,

Suite 507 Marquette Bldg., CHICAGO.

A PRACTICAL BOOK FOR PRACTICAL MEN

"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $1.50.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for enunciators; for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It explains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

KELLOGG PHILOSOPHY— *The Best Is The Cheapest*

KELLOGG
Frequency Pole Changer

UTMOST **SIMPLICITY** OF OPERATION

The efficiency and beauty of the Selective Harmonic Ringing System of the "Kellogg Company" has been fully recognized by the entire Independent field, but the difficulty heretofore has been that the system required a generating device which involved a high first cost and a relatively large consumption of energy.

The Frequency Pole Changer was designed to meet and overcome all these objections.

It is a very simple device, each unit involving only the use of a magnetic coil and three sets of springs.

FRONT VIEW

ADVANTAGES.

1. Requires very little attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from primary or storage batteries.
4. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
5. Operates successfully on any standard voltage of a telephone exchange.
6. Practically noiseless in operation.
7. Only THREE contacts on each vibrator.
8. The vibrators have a very long spring, hence they will not break or change the frequency.

This Pole Changer can be used on either Common Battery or Magneto Exchanges.

SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only. Write us for delivered prices.

Why Not Use the Best

AND THE ONLY GENUINE

Wrigley Patented Steel Toggle Bolt

with double flange sides and rigid back for securing brackets and fixtures to hollow tiling, marble slabs and steel ceilings. All other Toggle Bolts pivoted like cuts are infringements. The Trunnion Nut Toggle Bolt has a finished brass cap nut on the end. Hex. for wrench or round for screwdriver, plain or plated, and can be taken off after the bolt has been inserted, to place on the fixture. The bolt screws through the toggle plate the full length. Used for finished work, such as Telephones, Electric Fixtures and Marble Slabs. In ordering, mention if Trunnion Nut with Cap Nut or the plain Toggle Bolt is wanted.

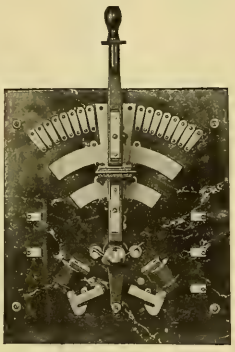
ALL STYLES

ALL SIZES

Full Reverse Motor Starter



This type of starter is adapted to start and operate a motor at full speed in either direction and is especially designed for use with direct connected machine tools, such as lathes and planers.

At full speed position the lever is retained by one of the magnets. In case of failure of current the magnet will release the lever and the spring will return it to the "off" position.

Bulletin 12 gives prices.

Columbia Lamp Qualities

A Few to Remember

Produces more light than other lamps for the same amount of energy expended. Distributes the light more evenly. Greater sustained candle power. Longer life. Reliability and efficiency unequaled. Low current consumption.

You cannot afford to overlook these good qualities when buying lamps—that means, your specifications should read **"Columbia."** One trial is convincing of their superior qualities. All candle powers and voltages carried in stock.

We have done no experimenting at the public's expense. The Gould Counter E. M. F. Regulating System was correct in the beginning and success has marked every installation.

Five years of severe test under service conditions has established the Gould Counter E. M. F. Regulating Booster as the most eminently successful Storage Battery Regulator on the market.

Suitable for either Direct or Alternating current regulation.

We invite the inquiries of those interested.

SOMETHING FOR NOTHING

"He who can make two blades of grass grow where one grew before is a benefactor to the whole human race."

WE CAN SHOW YOU HOW TO GROW THE SECOND BLADE

Central Station Heating as an adjunct to Electric Service has proven its worth. Electric Service alone is only one blade of grass; make Central Station Heating grow the second blade. By utilizing exhaust steam you are making something out of nothing—making dividends. The profit from heating **PUTS YOU ON VELVET.**

BUT Central Station Heating must be properly **designed** and **installed.** Our fundamental patents cover the **best features** and are **essential to economy** in operation.

THAT'S WHY our equipment is selected by the best properties in this country.

AGAIN, WE'VE SOMETHING NEW—The only central station heating system UTILIZING EXHAUST from steam turbines RUNNING CONDENSING. EXHAUST STEAM from non-condensing engines used with NO BACK PRESSURE. PERFECT TEMPERATURE CONTROL.

DO YOU KNOW ABOUT IT? If Not, GET POSTED

COSTS YOU NOTHING TO FIND OUT. We'll send you catalogue, list of installations and hints **"How to Make Your Plant Pay."** Write us.

EVANS, ALMIRALL & CO.

Our Exhibit at Atlantic City N. E. L. A. Convention

SIMPLEX SERVICE QUALITY IN ELECTRIC HEATING DEVICES stands for the very highest state of the art of making such things.

The advantages of Simplex Apparatus are real and tangible, and we'll have no difficulty in proving this to be the case, if you'll let us talk to you or read our illustrated catalog.

DIESEL OIL ENGINE PLANT, CITIZENS ELECTRIC LIGHT AND ICE COMPANY, LEBANON, INDIANA

Actual Performances

daily prove every claim we have made for the capacity, reliability and unparalleled economy of the Diesel Engine. No reciprocating steam engine, no steam turbine, no gas or other oil engine can even approach, under test, the regular daily performances of Diesel Engines under service conditions and in the customers' hands.

Observe these comparative efficiencies:

A good slide valve steam engine utilizes only	5%	A reheating compound or a triple expansion utilizes only	12%
A plain Corliss engine utilizes only	6%	The best oil engines (explosion type) utilize only	16%
A compound condensing engine utilizes only	8%	The best gas engines (explosion type) utilize only	19%

The Diesel Engine Utilizes Fully 38% of the Fuel Consumed

The Diesel Engine burns the cheapest grades of fuel and crude oil and petroleum distillates, costing, as a rule, less than 3½ cents per gallon delivered at your plant.

The following condensed reports are offered as specific proofs in support of our unchallenged claim that the Diesel engine is the most economical prime mover on earth.

Location of Plant	Average Load	Average Load Factor	Cost of Power
Tyrolean Alps, World's Fair, St. Louis	250 Kw.	50 per cent	3 mills per Kw. hour
Terminal Traction Bldg. Indianapolis	74.3 Kw.	30.54 per cent	3⅜ mills per Kw. hour
Citizens Electric Light & Ice Co. Lebanon, Ind.	63.6 Kw.	27 per cent	3 6 10 mills per Kw. hour
Effingham Light & Power Company Effingham, Ill.	28 Kw.	16 per cent	4½ mills per Kw. hour
Wayne Paper Mills Hartford City, Ind.	233⅓ Kw.	78.8 per cent	2 9-10 mills per Kw. hour

There are many other plants doing as well or still better. These are average plants selected so as to show the remarkable economy of this engine under all conditions of load.

TO THOSE INTERESTED

a valuable new catalogue has just been issued. It contains a full description of the Diesel Engine, with data and records of actual daily performances. Copies free.

The Central Station Man's Toast

The following toast on "Meters" was recently offered at a dinner at which a number of central station owners, managers and superintendents were present.

It shows, beyond any possible doubt, the high esteem in which the Duncan meter is held, and the popularity which it enjoys.

"The Gourmet is a meat-er
Loves his viands and his wine;
And the Poet uses meter
In his verse for every line;
The Gas man has a meter
For his product volatile;
And the Waterworks a meter
For its fluid—pure or vile.
The Lover loves to meet 'er
In the pleasant summer's night;
And all use the Duncan Meter
For to measure Power and Light."

It must be admitted that the author of the foregoing displayed excellent judgment in his choice of an electric meter; and, after the banquet, he admitted that he had tried all makes of meters and found the DUNCAN the "Gibraltar" of his defense against loss of money on small load customers—by virtue of its extreme accuracy. It's the "Meter of equity." Let us send a sample to you on 30 or 60 days' trial. This is all we ask, as the meter will do the rest.

FOSTORIA NOBLAC

TO USERS OF INNER GLOBES

The enormous demand for NOBLAC Inner Globes, both ordinary and heat resisting, is only one of the many reasons which have convinced the shrewd buyer that they are the best on the market.

There is no guess work about NOBLAC Inner Globes.

They are made accurately, honestly and perfectly.

They fill all requirements.

They do not blacken, and require cleaning much less frequently than any other make.

The glass of which heat resisting NOBLAC Inner Globes are made does not soften under the fiercest heat.

The heat resisting NOBLAC are longer lived than any others, due to the fact that they withstand greater and more sudden variations of temperature. This fits them for especially severe conditions of service.

They can be operated without an outer globe at a considerable saving to the lighting company and with increased light to the public.

We guarantee a high standard of uniformity.

We have three large factories with adjacent warehouses aggregating 127,000 square feet of available floor space.

We make an aggregate of twenty million pieces of special high-grade heat resisting glassware annually.

Send for "THE STORY OF FOSTORIA"—It contains much valuable information for Inner Globe users.

WHEN YOU COME TO FACE THE LAMP QUESTION

WHICH LAMP WILL YOU BUY?

Now that everyone of our competitors has acknowledged the advantage of the downward light and is either selling lamps specially made to deliver the light in the direction opposite to the base or is advising the use of reflectors to do so, it is well for you to decide which lamp is best.

The lamp directly above is the kind of lamp you have used for years It has delivered 7 C. P in the direction opposite the base, although it is rated a 16-C. P lamp. It has given you satisfaction, hence 7 C. P is probably sufficient light on the work. It requires either 50, 56 or 64 watts an hour At 10 cents per thousand watts it costs $5.60 to operate a 56-watt lamp 1000 hours.

The lamp directly above is the Shelby Useful Light Lamp. It is the kind we advise you to use. It will deliver, in the direction opposite the base, more light than the lamps you have been using, which have proven satisfactory to you. It requires 45 watts per hour to operate this lamp It will last as long as any 16-C P 56-watt lamp. At 10 cents per thousand watts it costs you $4.50 to operate this lamp for 1000 hours

A saving of $1.10 on each lamp burned for one thousand hours. Can you afford to neglect this? Send for our book "The Cost of Illumination" It is free for the asking

You Support The Lamp Organization's "Red Tape Factory"

That extra cent or so you pay for your lamps—do you realize that it is what supports the "Organization's Red Tape Factory?"

You never heard of the Red Tape Factory? No, because they do not list it with the other 26 to 30 or so lamp factories. But it is running just the same. And it is weaving daily vast quantities of the "tape" that binds you and their salesmen together (at "16 to 18 cents per)."

Now, you see it is this way. Each rapid-fire, hustling little lamp salesman has tied to his coat-tail a narrow but very long piece of red tape. This tape reaches back to his district manager's office; and, would you believe it, the district manager, too, has a piece of red tape tied to his coat-tails, and that piece of red tape is a long piece, but it is not so narrow and reaches back to—well way back into what we might call the "inner circle" of the "Organization"—and—well—nobody "on the outside" has yet really followed the tape to its end—but there is a great network of red tape at the "inner circle."

Think of these 26 to 30 or so "lamp companies," each with its little army of salesmen—think of all the factories of these companies; think of the fact that they are all bound together with this red tape to prevent any wicked little salesman, perchance, to cut a price; think of the books, the auditors, the stenographers, the general managers, the district managers, etc., etc., etc., and you will see why the "Organization" needs its red tape factory.

You have your own accounts to keep and you know what it is to run a single business—think of all this—and you will understand how it is that somewhere there must be a "red tape factory" running night and day AT GREAT EXPENSE TO WEAVE "THE TAPE THAT BINDS" THIS ARMY TOGETHER, and, don't forget this either, the little one cent or so that you pay for your lamps supports this factory.

Why do you pay it? Why not buy your lamps from a factory that has no "red tape annex"—a factory that much prefers to give that extra cent to you, and can still make a fair profit?

We may some day tell you more about the intricacies of the "Organization's Red Tape Factory."

FOSTORIA

IN PASSING

The gentleman who stood on a busy city thoroughfare selling gold dollars for ninety cents had to "shut up shop" because he could do no business, and the fellow who bottled up the doped water and sold it for "positive pain killer" had to do the same thing because he ran out of water. Like Gorgon Graham, "we merely mention this in passing" because the fellow who starts out to get other than his money's worth generally "gets it."

There are thousands of lamp buyers to-day who are "getting it," and although the laws of nature decree that this is a necessary condition, we believe that there are many who do not really deserve it, and it is to them that we are beckoning. We cannot, here, go into detail, and our health isn't our last consideration—but our customer's interest *is* our first—that's because our health depends upon it.

Here's our prescription—give your customer his money's worth—that is the real honest value of his hard earned coin—and let events take their course.

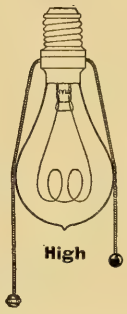
Write us.

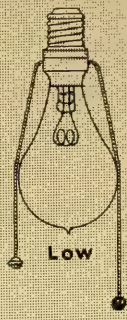
THE FOSTORIA INCANDESCENT LAMP CO.

FOSTORIA, OHIO

LIGHT TWIXT AND DARKNESS

HYLO LAMPS





One big advantage of the HYLO pull string:—

It turns the light out as well as high and low.

Convenient for tall fixtures and short women—strings are long enough and strong enough.

Switching mechanism inside the base secure from dust and dampness. Simple and safe. The original and only satisfactory pull string.

For the light twixt darkness and 16 c. p. you need a HYLO.

The lamp of Phelps is the one great improvement in home illumination since Edison "subdivided the incandescent light" a quarter of a century ago.

prevails in the mind of the station manager who does not push the HYLO—He uses a snap switch and for the time being has snapped off his better 16 c. p. judgment.

Snap on the judgment again full power and see that the HYLO gives the only argument based on cost for getting new residence customers.

Experience has shown that HYLO means increased business where pushed.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.

This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.

A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 263 illustrations. Price $1.00.

Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on the subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.

A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price, $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. 136 pp.; illustrated. Price $1.00.

The Above, or Any Other Electrical Work Published, Sent on Receipt of Price.

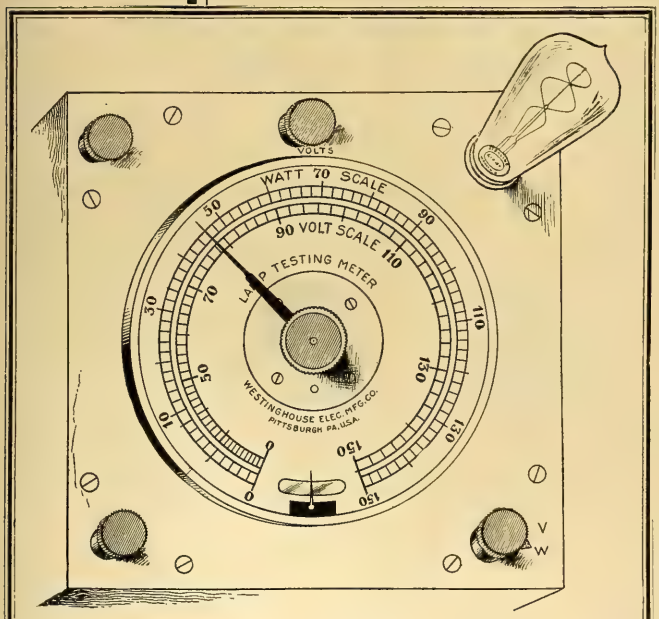
The Advent of the New High Efficiency Incandescent Lamp

is causing much speculation as to life performance, etc., and while awaiting demonstration many lamp users are getting the results in advance in the use of the

Sterling Special 48-Watt Lamp



The Wattmeter Tells the Story **Your Bank Book Confirms It**

EVIDENCE

Avondale Mills,
Birmingham, Ala., 3-24-06.

Charlotte Supply Co.,
Birmingham, Ala.

Gents:—In reply to the inquiry of your Mr. McCothern a few days since, I will say that we are pleased to report that the Sterling Special Lamp has more than met our expectations.

We put them in at the time we were changing the mill from white work to colored, having found that we would need considerably more light than was necessary on white work.

We were considering installing another Generator and increasing the number of lights, and had already received bids on a new Generator when we tried the Sterling Special Lamp as an experiment, and were agreeably surprised to find that we had already solved the problem and that we did not need another Generator or any more lights.

You can safely refer any to me in regard to the lamp, for we get at least 25 per cent more light with this lamp than with any lamp that we have used up to date and this without increasing the load on the Generator. I consider that the use of this lamp has saved this company the price of a new Generator and new wiring, and can heartily recommend it to anyone using incandescent lamps.

Yours very truly,
Geo. R. Simcox, M. M.

HORNSBY AKROYD OIL ENGINES

5 TO 250 H. P.

Will furnish power at a fuel cost of

1-2 TO 3-4 CENT PER K. W. HOUR

BURNS KEROSENE, CRUDE OR FUEL OIL

Over 14,000 of these engines are in operation. We are installing 4,000 H. P. for one customer. They can be direct-connected to generator and are perfectly adapted to use in central stations. Catalogue F describes them.

Tenth Edition. **Just Published.**

ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. **Fully Illustrated.** **PRICE, $1.00**

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar.
CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity.
CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Curr. nt.
CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory.
CHAPTER VI. Electromagnetic Induction and Action of Currents Upon Each Other; The Induction Coil and its Application.
CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries.
CHAPTER VIII. Dynamos; Motors; Transmission of Power.
CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.

Sixteenth Edition. **Just Published.**

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. **Illustrated.** **PRICE, $1.00**

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law. CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mills. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy. CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. **393 Illustrations.** **PRICE, $3.00**

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. **Just Published.**

A Book Proposition

We want to dispose of our shelf-worn books. Most of them are works usually to be found in scientific libraries, and we believe you will approve the plan by which you can secure some of them practically without cost. ***See offer at bottom of page.*** The list follows:

	List Price	Sale Price
Mechanical Manual, by E. L. Hobson, Philadelphia, Pa..	.50	.20
Secret Letter and Telegraph Code, by Charles Larrabee, New York, 1884	.60	.20
Electricity, Magnetism and Electric Telegraphy, by Thomas D. Lockwood, New York, 1890	2.50	1.00
A Treatise on Electro Metallurgy, by Walter G. McMillan, F. C. S., London, 1890	3.50	1.75
Laboratory Manual of Physics and Applied Electricity, Vols. 1 and 2, by Edward L. Nichols, New York, 1894..	6.25	2.50
Aluminum, Its History and Occurrence, Properties, Metallurgy and Applications, by Joseph W. Richards, M. A., Philadelphia, 1890	6.00	2.75
Electric Light Installations, Vol. 3. Application by Sir David Salomons, M. A., New York, 1890	1.50	.75
Press Working of Metals, by Oberlin Smith, New York, 1896	3.00	1.75
Outlines of Industrial Chemistry, by F. H. Thorp, Ph. D., New York, 1898	3.50	1.75
Evolution of the Electric Incandescent Lamp, by Franklin Leonard Pope, Elizabeth, N. J., 1889	1.00	.50
Power Catechism, New York, 1889	2.00	.75
Electric Light Installations, Vol. 2, Apparatus, by Sir David Salomons, M. A., London, 1894	2.25	1.25
Electricity Simplified, by T. O'Connor Sloane, Ph. D., New York, 1897	1.00	.50
Dynamo Electric Machinery, by Silvanus P. Thompson, D. Sc., American edition, New York, 1902	5.00	2.75
Polyphase Electric Currents and Alternating Current Motors, by Silvanus P. Thompson, New York, 1898	3.50	1.75
How to Run Engines and Boilers, by E. P. Watson, New York, 1901	1.50	.75
Drum Armatures and Commutators, by F. Marten Weymouth, London, 1893	3.00	1.50
The Electrical Transmission of Energy, by Arthur Vaughan Abbott, C. E., New York, 1900	4.50	2.00
Telephone Systems of the Continent of Europe, by A. R. Bennett, London, 1895	4.50	2.00
Motor Power and Gearing for Electrical Machinery, by E. T. Carter, C. E., London, 1896	5.00	2.25
Textbook on Gas, Oil and Air Engines, by Bryan Donkin, London, 1896	7.00	3.25
Practical Application of the Indicator, by Lewis M. Ellison, Chicago, 1897	2.50	1.00
Original Papers on Dynamo Machinery, by John Hopkinson, M. A., New York, 1893	1.00	.50
Patented Telephony, Chicago, 1897	1.50	.60
Derivations of Practical Electrical Units, by Lieut. F. B. Badt and Prof. H. S. Carhart, Chicago, 1890	.75	.35
Electricity as a Motive Power, by Count Th. du Moncel, London, 1883	3.00	1.25
Decorative Electricity, by Mrs. J. E. H. Gordon, London, 1891	2.50	1.00
Electrical Appliances of the Present Day, by Major D. P. Heap, U. S. A., being a report of the Paris Electrical Exhibition of 1881	2.00	.75

	List Price	Sale Price
The Telegraphist's Guide: The New Examinations of Technical Telegraphy, by James Bell, A. I. E. E., London, 1895	.50	.20
The Mechanical Arts Simplified, by D. B. Dixon, Chicago, 1897	2.50	1.25
Electric Lighting, translated from the French of Count du Moncel, by Robert Routledge, B. S. C., London, 1883...	1.25	.60
Physical Units, by Magnus Maclean, D. Sc.	1.00	.40
The Indicator and Dynamometer, by Thomas J. Main, M. A., Philadelphia, 1883	1.50	.70
The History and Process of the Electric Telegraph, by Robert Sabine, C. E., London, 1869, cloth	1.25	.50
Paper	.75	.25
Bearings and Lubrication, by A. J. Wallis-Taylor, C. E...	1.50	.75
Electricity in Our Homes and Workshops, by Sidney F. Walker, London, 1889	1.50	.75
The Mathematical Theory of Electricity and Magnetism, by Watson & Burbury, London, 1885. Vol. II, Magnetism and Electrodynamics	2.60	1.25
Electricity, Its Theory, Sources and Application, by John T. Sprague, London, 1892	6.00	1.80
Telegraphy, by W. H. Preece and J. Sivewright, London, 1888	2.00	1.00
Electricity and Magnetism, by Francis Nipher, A. M., St. Louis, 1895	3.25	1.50
Modern American Methods of Copper Smelting, by Edward Dyer Peters, Jr., M. E., New York, 1891	5.00	2.25
Solutions of the Questions in Magnetism and Electricity, set at the Intermediate Science and Preliminary Scientific Pass Examinations of the University of London, 1860 to 1884, by F. W. Levander, London, 1885	1.00	.25
Domestic Electricity for Amateurs, translated from the French of Hospitalier, London, 1889	2.50	.90
Gray's Treatise on Magnetism and Electricity, Vol. I, by Andrew Gray, LL. D., F. R. S., London, 1898	4.50	2.50
Electricity, by Robert M. Ferguson, Ph. D., D. R. S. E., London, 1890	1.50	.75
Coil and Current, or the Triumphs of Electricity, by Henry Frith, London, 1897	1.25	.50
A Century of Electricity, by T. C. Mendenhall, Cambridge, 1887	1.25	.50
Magnetism and Electricity, by Arthur William Poyser, M. A., London, 1890	.80	.25
Potential and Its Application Popularly Treated, by Dr. Tumlirz, London, 1889	1.50	.65
Continental Electric Light Central Stations, Killingworth Hedges, London, 1892	6.00	2.85
Theory of Electricity, by Linnaenus Cumming, M. A., London, 1885	2.25	1.00
Electricity Treated Experimentally, by Linnaeus Cumming, M. A., London, 1891	1.50	.75
The Law Relating to Electric Lighting, by G. Spencer Bower, B. A., London, 1889	5.00	1.80
Mathematical Theory of the Steam Engine, by T. Baker, C. E., London, 1890	.75	.25
Elementary Treatise on Natural Philosophy, by A. Privat Deschanel, Part 3, Electricity and Magnetism, New York, 1893	1.50	.80
Electricity in Modern Life, by G. W. De Tunselmann, London, 1889	1.25	.60

☞As long as they last (we have but a few copies of each) we will send them to you ABSOLUTELY FREE to the amount of 50 per cent of your purchases of other books—that is, books not included in the above list. For example, if you send $5.00 for the famous Hand-Book Series, namely, New Dynamo Tenders' Hand-Book, Bell Hangers' Hand-Book, Incandescent Wiring Hand-Book, Electric Transmission Hand-Book and Telephone Hand-Book, we will allow you to select from the list of shelf-worn books to the amount of $2.50 **list prices.**

Or we will fill your orders for any of these books at the sale prices given.

You would better send your orders early thereby gaining the advantage of a first choice.

SAMSON TURBINE

Almost every one knows that for a given amount of power, the quicker the speed of a turbine, the better. This is due to the fact that LIGHTER and consequently CHEAPER TRANSMISSION MACHINERY can be used. The SAMSON has a QUICKER SPEED than any other turbine of the same dimensions operating under the same conditions.

NOTICE

On Sept. 5, 1905, the U. S. Patent Office issued to Oscar M. Leich the dominating patent on Selective Four-party Telephone Ringing Systems covering all present practical forms of high and low frequency systems, together with all so-called harmonic or different frequency arrangements. We are sole licensees under said patent.

KELLOGG MICHIGAN WHITE CEDAR POLES

SEND FOR POLE BOOK

The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only.
Write us for delivered prices.

Electricity Meters

Their Construction and Management

A Thoroughly Practical Manual for Central Station Engineers, Distributing Engineers and Students

BY

C. H. W. GERHARDI

This valuable Practical Manual on the Management of Electricity Meters, which will form a volume in "THE ELECTRICIAN" Series, will be ready next week. The Author has had many years' exceptional experience with Electricity Meters in connection with the Meter Department of the largest electricity supply undertaking in the Kingdom. Mr. Gerhardi's intimate acquaintance with the working of all existing meters on the market and with the details of their construction and management is a guarantee that the book will meet the requirements of those engaged in work in which the Electricity Meter forms an essential part. In the division of the book devoted to "Testing" Mr. Gerhardi's unique experience will prove of the greatest service to supply station engineers and managers.

Very full Chapters on TESTING, and PRACTICAL HINTS to METER INSPECTORS, ETC.

8vo, Cloth, 291 Pages, 178 Illustrations **Price $2.50 Net**

Alternating Currents

Their Theory, Generation and Transformation

BY

ALFRED HAY, D.Sc., M.I.E.E.

EXTRACT FROM PREFACE

In the following pages, an attempt is made to furnish the reader with a general account of the principles, construction, and use of alternate-current measuring instruments, generators-motors and transforming machinery. Special attention is de, voted to methods of testing. The first three chapters contain a sketch of alternate-current theory. The author has tried, as far as possible, to exclude everything of purely academic or historical interest; on the other hand, he has not hesitated to devote a good deal of space to matters which are either not generally understood, or which are of too recent origin to have found their way into many text-books.

CONTENTS.

Alternating Currents. Frequency and Wave Shape. Form, Factor and Amplitude Factor. Series Arrangement of Impedances. Polyphase Currents. Theory of the Wattmeter. Effect of Self-Inductance. General Conditions to be Satisfied by Alternate Current Instruments. The Dynamo Used as an Alternator. Transformers. Ratio of Transformation. Induction Motors. Squirrel Cage Instruments. Alternator Used as a Motor Synchronism. Regulation of Alternators and Transformers. Resistance Measurements of Alternating Current Machinery. Assumption Underlying Approximate Theory of Induction Motors. Experimental Data Required for Construction of Circle Diagram. Determination of Hysteresis Loss. Generator Action of Induction Motor at Hypersynchronous Speed. Phase Relation of Stator and Rotor Currents. Rotary Converters and Their Uses. Compensated Motor. Index.

NINTH EDITION REVISED

12mo, Cloth, 178 Pages, Illustrated **Price $2.50 Net**

The Management of Accumulators

A Practical Handbook

An Edition, Mostly Rewritten, of Volume I of "Electric Light Installations"

BY

SIR DAVID SALOMONS, Bart., M.A.

EXTRACT FROM PREFACE

This book aims at filling a gap which, in practical scientific literature, is very noticeable. It presents to the reader a general survey of the practice of Electric Lighting and Management of Accumulators, with such recommendations as are likely to assist him in obtaining successful results.

The writer feels confident that the directions here laid down, if carefully followed, will prove of great service, so that professional advice will very rarely be required. In fact, this little book is the outcome of years of labor, and of an almost countless number of experiments, undertaken without considering trouble or cost; for solely in this manner can reliable results be obtained. Only those types of cells largely in practical use are dealt with. The many other types that exist would be more properly described in a history on the subject, which this little treatise is not intended to be.

CONTENTS.

Introduction. Index of Terms. Description of Cells and their Mode of Employment. Setting up the Cells and the Accumulator House. Charging—Storage Capacity of Various Cells—Weight per h.p.-hour Capacity of Various Accumulators. Discharging. Failures; their Causes and Remedies. Testing a Section. Summary. Index.

Why we are creating a Wide Open Market!

It is not that we sell you a "cheap" lamp,—
or it is not so much that we sell you a cheaper lamp
than the "Organization",—and we certainly do that,—
but rather,—that we save a cent or so in expense,—and
hence are able to give it to you by cutting off some of
your price, yet we make a manufacturer's profit the same
as does the "Organization"—

Therefore,—Why not buy our lamp?
as We Save You money.
You might as well make your Profit!

St. Mary's Incandescent Lamp Company

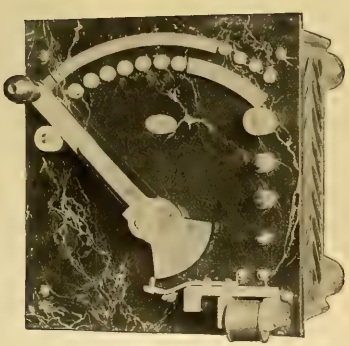
C. & H. Ventilating
Fan Controller



This type of controller is for use with shunt or compound motors, where it is desired to obtain speeds above normal by the insertion of resistance in the shunt field circuit, and also provides for decreasing the motor speed below normal by several steps of armature resistance This method of speed control is particularly well adapted for controlling motor driven fans, as it provides a wide-range of speed control with motors of standard design.

You Are Part of All You Have Met

There's a big thought in this short statement.

You that go to the Convention have your little rounds of friendly pleasure. Good spirits bubble over.

But with the friendship and the pleasantries go hard and useful facts of permanent value like cargoes on rippling waters.

At a convention ideas as well as people convene.

We'll meet you at the Convention just as we have met many of you at conventions before.

We shall be glad to see you because of our past associations.

But we have something new to show you, hard business logic you will carry away, ideas about ourselves and our business that mean money to you in the future.

Look us up at the end of the long corridor.

We are part of all we have met.

The Nungesser Electric Battery Company

THE LIFE OF A BATTERY

Telephone Manufacturers and Telephone Companies — Manufacturers of Gas and Gasoline Engines, [illegible]

Rock Island New Patent Dry Cell Battery

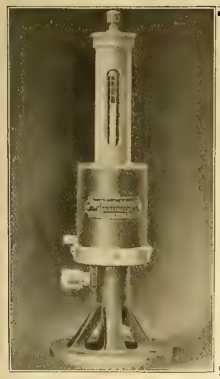
The carbon used is placed in a chemically prepared cloth and not wrapped in blotting paper, found in *other* cells. Set in a wall of chemical instead of the bare can, the method used by others, this treatment so

HOLDS THE MOISTURE CAPTIVE

that neither heat nor cold can possibly affect it. That is the reason a *hand-constructed* Rock Island lasts *nearly one-third* longer than a *machine-made* battery. The *heart* of the Rock Island is sound. There is *less* internal resistance, *more* constant tension and *better* recuperative power than are possessed by any *other* battery made. Our Standard No. 8, cheaper in the long run, does highest class work and is larger than Standard No. 6, the regular size for general purposes. Department A will send prices. Order a barrel. You'll find immediate dividends in improved service.

R I BAT

ROCK ISLAND BATTERY CO.
Ninth and Sycamore Streets CINCINNATI OHIO



NIAGARA TACHOMETERS

represent the acme of perfection in high-speed indicating devices: simplicity in construction, absolute accuracy, and require minimum attention.

The type "C" instrument shown is for direct connection to vertical shafts adapted to apparatus having high rotary speed where belt drive is not practical. We make instruments that will exactly meet your requirements. Write for catalogue

NIAGARA TACHOMETER AND INSTRUMENT CO.
NIAGARA FALLS, N. Y.

Sold by electrical supply houses

THE "BABY" TORCH

Burns Without Air Pressure

THE "Baby" Gasoline Torch is the smallest torch made which gives perfect results, and fills the long-felt want for a torch which fits the hand and can be used in contracted places and corners. It can be turned in any position, as it burns equally well in all positions. It is perfectly automatic; has no cocks or valves to get out of order; lights with a match; self-feeding; requires no pumping of air and is always ready for use. It is indispensable to the Telephone and Telegraph linemen and ELECTRICIANS. It burns about two hours from one filling.

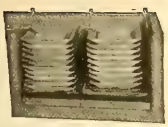
NEW YORK, CHICAGO

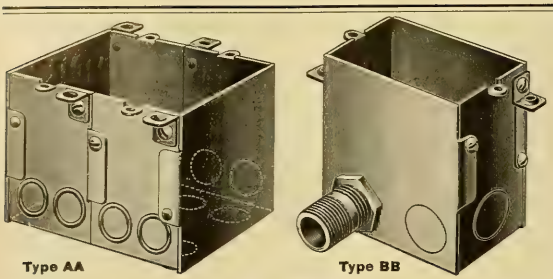
BUFFALO, N. Y.



THE ELECTRO-CHEMICAL TRAY BATTERY

Important point— **no "choking" gas.**
Made up in "tray form," hence for a battery of a voltage of 110, one stack would only stand **about 30 inches high**. Many other **good novel points—investigate it.**

SMITH STORAGE BATTERY CO., - - Zoar, O.



Type AA Type BB

For New and Old Work

UNION OUTLET SWITCH BOX

PATENTS PENDING

Approved by the Underwriters National Electrical Association. Takes all Standard Switches and Receptacles

Designed so that a **two-gang** box can be converted into any number of gangs by releasing the clamping screws and inserting "Spacers." These gangs are easily assembled with the aid of a screwdriver, and fit together snugly, making a perfect and solid gang box for any required number of switches.

CHICAGO FUSE WIRE & MFG. CO.

NEW YORK CHICAGO BUFFALO

There's No Friction

with the Fibre-Graphite Commutator Brush.

Being 90 per cent. pure graphite, it insures low resistance, no sparking under a varying load, and longer wear. There is no greasing required. The Fibre-Graphite is therefore the most economic brush on the market. Send for price list.

HOLMES FIBRE-GRAPHITE MFG. CO.

3155 Wakefield Street, Germantown, PHILADELPHIA.

When a man's electrical ideas flow freely; when he discusses electrical subjects intelligently and glibly, you will be pretty safe in assuming that he keeps in touch with electrical progress by perusing the Western Electrician 52 times a year.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $5.00.

This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The apparatus and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.

A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.

Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on the subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.

A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo, 48 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association Cloth bound; fully illustrated. Price, $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H Cary. 136 pp.; illustrated. Price $1.00.

ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. Fully Illustrated. PRICE, $1.00

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar.

CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity.

CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Curr, nt.

CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory.

CHAPTER VI. Electromagnetic Induction and Action of Currents Upon Each Other; The Induction Coil and Its Application.

CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries.

CHAPTER VIII. Dynamos; Motors; Transmission of Power.

CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.

Sixteenth Edition. Just Published.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mills. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy. CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. 393 Illustrations. PRICE, $3.00

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. Just Published.

ELECTRIC TOY MAKING

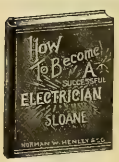
DYNAMO BUILDING and ELECTRIC MOTOR CONSTRUCTION

By PROF. T. O'CONOR SLOANE

185 Pages. Very Fully Illustrated. PRICE, $1.00.

Contents

CHAPTER I. Batteries. CHAPTER II. Permanent Magnets. CHAPTER III. Electro-Magnets. CHAPTER IV. Electric Motors. CHAPTER V. Electric Bells. CHAPTER VI. Miscellaneous Toys. CHAPTER VII. Spark and Induction Coils, and Allied Subjects. CHAPTER VIII. Hand-Power Dynamo. CHAPTER IX. Miscellaneous Receipts and Formulæ.



Twelfth Edition. Just Published.

How to Become a Successful ELECTRICIAN

By PROF. T. O'CONOR SLOANE

200 Pages. Illustrated. PRICE, $1.00

Contents

Stanley - G. I.

The Stanley-G. I. Electric Mfg. Co. is a consolidation of the Stanley Electric Mfg. Company of Pittsfield and the General Incandescent Arc Light Company of New York. The Stanley Company's product, marketed under the well-known trade name of the S. K. C. System, comprises Generators, Transformers, Rotary Converters, Motor Generator Sets, Switchboard Apparatus, Induction Motors, etc. The General Incandescent Arc Light Company has been favorably known as builder of the high-grade G. I. Arc Lamps, Arc Lamp Regulators, Incandescent Lamps, alternating current and direct current Motors, General and Special Electrical Supplies.

Main Office and Factory ST. LOUIS, U. S. A.

Mr. Central Station Man:—

You may be manager of a large station, or perhaps it's a small one, but whichever it is you use bookkeepers, cashiers, time-keepers, etc., just to see that everything is right and as it should be; you have an auditor come in once in a while and "check up;" now it's this "checking up" that makes you feel easy. You do this for the books, the least important part of the plant; what do you do for the generators, lines, instruments, etc.? Right here's where we come in; get an "Auditor," get a little portable instrument to "check up," to keep you right before you go wrong, to straighten you out. Our little "Auditors," our portables will do this, they are as accurate as government standards and they are not expensive. Let us show you bulletin No. 71H.

DISTRICT OFFICES IN ALL THE PRINCIPAL CITIES

KNOWLEDGE IS POWER

Let Us Help You To Learn More

An Excellent Opportunity to Obtain PRACTICAL Information on

ELECTRIC LIGHT PLANTS

THE pithy old adage, "Knowledge is Power," is so true as to be self-evident. We must know things to do things. For practical men, practical information is wanted. To supply this need constantly arising as new men enter the electrical field, the Western Electrician, beginning in its issue of July 7, 1906, the first of the new volume, will enter upon the publication of a valuable and notable series of articles (constituting, when finished, a complete treatise on the subject)

The Small Central Station

Practical Hints on Its Construction and Operation

The scope of this eminently practical work, written by experienced authorities on the subject, is well indicated by the list of chapter headings:

I. General Observations.
II. Building and Foundations.
III. Fuel and Waterpower.
IV. Boilers and Setting.
V. Operation of Boilers.
VI. Engines.
VII. Steam Turbines.
VIII. Belting and Shafting.
IX. Electrical Equipment—Generators—Switchboard.
X. Arc and Incandescent Lamps.
XI. Instruments.
XII. Transformers.
XIII. Line Construction.
XIV. Distribution.
XV. Cost of Plants.
XVI. General Data.

The articles supply data relating to small and medium-sized stations using overhead construction, and are especially adapted for intending purchasers of electric-light plants and practical men. Within this field the ground is thoroughly covered in view of the requirements of the best modern practice. Operations and construction are dealt with at length, and the information given has been compiled from the experiences reported by central station managers operating in all parts of the United States, handling various types and sizes of machinery. The series will be enriched with **numerous illustrations, diagrams and tables.**

These articles will be of much value to all readers of the Western Electrician, new and old, interested in the practical operation of electric-light plants.

REMEMBER that this noteworthy series on **Electric Light Plants** will begin in the Western Electrician of July 7, 1906, and run for from four to six months.

"BULL DOG" STEEL GAIN

A pressed steel support for cross arms consisting of two plates, one engaging the arm and the other the pole. It provides a means of mounting arms without cutting gains. It strengthens the arm and pole. It facilitates the placing and alignment of cross arms. It saves braces on four and six pin arms. It can be purchased at a cost slightly exceeding the cost of cutting a gain. It is made for telephone and standard arms and will fit any pole.

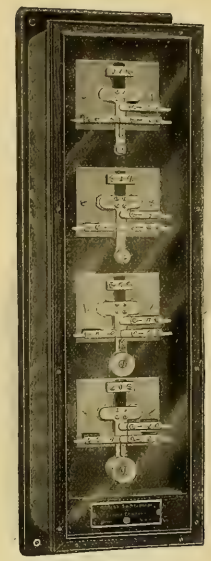
KELLOGG PHILOSOPHY —— THE BEST IS THE CHEAPEST

KELLOGG

FREQUENCY POLE CHANGER

Utmost SIMPLICITY of Operation



"POLE CHANGER." COVER REMOVED

THIS POLE CHANGER can be used on common battery or magneto exchanges.

Advantages:

1. Requires very little attention after once set up and put in working condition.
2. The tuned vibrating reeds are absolutely adjusted and will not depart from their regular periodicity.
3. Operates from Primary or Storage Batteries.
4. They can be operated from the regular storage battery of the exchange without affecting the talking circuits.
5. Operates successfully on any standard voltage of a telephone exchange.
6. Practically noiseless in operation.
7. Only THREE contacts on each Vibrator.
8. The vibrators have a very long spring, hence they will not break or change the frequency.

The Transformer Cabinet contains all necessary Switches, Fuses, etc.
Pole changer cabinet and transformer cabinet separate.
Can be put in different rooms if desired.
Sold separately or complete.
No additional apparatus needed on power board already installed.

Send for "Folder No. 3-F." ***Correspondence Solicited.***

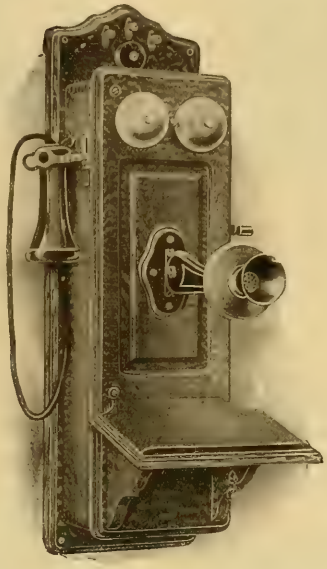
Our Telephones are built to last, and the "Kellogg" Guarantee is back of every one we sell.

Send for "Bulletin No. 8-F."



Four Good Specials

Set No. 1303—With Grounding Key. With this attachment you can ring the other subscribers on your line without calling the exchange. Or, you can call the exchange operator without ringing the other bells on the same line. SIMPLE—INEXPENSIVE—EFFECTIVE.

Set No. 1298—Condenser in the Secondary Circuit. Bells can be rung when all the receivers are off their hooks. Indispensable for heavily loaded lines.

Set No. 1274—Transmitter Cut-Out. Saves batteries and is a great convenience.

MADE TO ORDER—Selective 2 or 4 Party Instruments with Direct Current Generators. Enable you to call central without ringing the other parties on the line.

To Our Friends and Patrons

The National Interstate Telephone Association will hold its Annual Convention at the Auditorium Hotel, June 25th to 28th, and in accordance with the policy pursued by this Company for several years, instead of placing a few switchboards and pieces of apparatus made especially for the occasion on exhibition, we will open the doors of our plant to the Convention and make our entire factory our Exhibit. Our plant constitutes an exhibit of which we are justly proud, and it is not possible to give an adequate idea of its size, operation and product in any other way.

Representatives of the Company will be at the Convention, who will take pleasure in showing you through all of our departments and explaining every detail. During the Convention we will have several large and up-to-date automobiles in constant service between our factory and the hotel.

We sincerely trust that you will remember this invitation and that we may have the pleasure of extending to you any courtesies in our power.

Kellogg Switchboard & Supply Company

KELLOGG MICHIGAN WHITE CEDAR POLES
SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only.
Write us for delivered prices.

Iron Clad Service Switch

This device was designed for use in locations exposed to dampness, corrosive fumes, or mechanical injury.

The case is of cast-iron, having a closely fitting door with spring latch, which can be sealed or pad-locked.

In the box is mounted a 25-ampere combined switch and cut-out on a porcelain base. The three following styles are now furnished:

Cat. No.		Price
1210	110-v. 2-wire	$3.12
1212	250-v. 2 "	3.75
1214	260-v. 3 "	4.50

Discount 50 per cent

Special prices in quantities

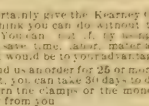
$250
Saved on this pole at Topeka, Kas., by the Topeka Edison Co., by using FORTY KEARNEY CABLE CLAMPS

Kearney Clamps

PATENTED OCT 10, 05



For Supporting Electric Light and Power Cables of From 3-0 to 1.500.000 C. M.

YOU should certainly give the Kearney Cable Clamp a trial. You may think you can do without them or using the old method. You can, but if by using the Kearney Cable Clamp you save time, labor, material and money, don't you think it would be to your advantage to use them?

If you will send us an order for 25 or more to be shipped by prepaid freight, you can take 30 days to decide whether you prefer to return the clamps or the money. You can't lose. Let us hear from you

Send for Handsome 1906 Catalog.

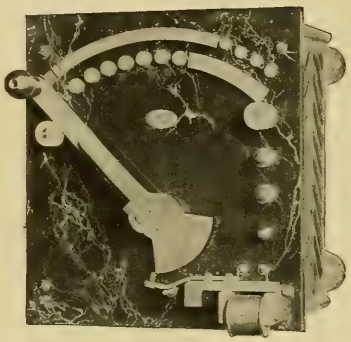
C. & H. Ventilating Fan Controller



This type of controller is for use with shunt or compound motors, where it is desired to obtain speeds above normal by the insertion of resistance in the shunt field circuit, and also provides for decreasing the motor speed below normal by several steps of armature resistance This method of speed control is particularly well adapted for controlling motor driven fans, as it provides a wide range of speed control with motors of standard design.
Bulletin No. 44 gives full description and prices.

MORE LIGHT WITH LESS CURRENT

and better light with greater uniformity by using

COLUMBIA LAMPS

They have no equal on the market today and when next you need lamps you can do no better than to give the good qualities of the Columbia a trial

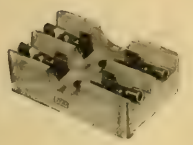
Central Electric Company,

SALES AGENTS

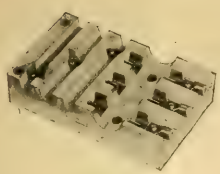
264-266-268-270 FIFTH AVENUE CHICAGO

ELECTRICALLY PERFECT

0-30 Amp., 250 V.



31-60 Amp., 250 V.



31-60 Amp., 250 V.

"Peru" N. E. Code Standard

CARTRIDGE FUSE BLOCKS

have been pronounced electrically perfect by all unbiased critics. Every terminal is completely protected by porcelain, a feature found in no other blocks. All brass parts are heavy and properly formed, and the bronze springs make a perfect contact with the fuse.

"Peru" Blocks are the safest blocks on the market. A porcelain wall completely surrounds all metal parts, making a short circuit impossible. All terminals are countersunk in the porcelain, preventing the clips from becoming out of line, and any make of New Code fuses can be used.

Our prices will interest you. May we quote you on your next order?

PERU ELECTRIC MFG. CO.

PERU, INDIANA

50 TIMES THE RESISTANCE of COPPER

"CLIMAX"

RESISTANCE WIRE

Has the highest specific resistance of any wire on the market.

Does not become brittle by repeated heating and cooling.

Driver-Harris Wire Co.

"Ribbons Show Which Way the Wind Blows"

You Get the AIR, but NOT the Direct DRAFT

WITH

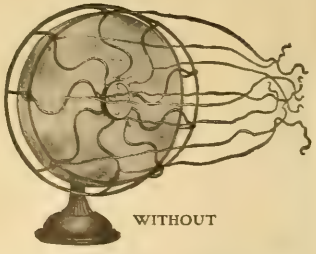
From the Electric Fan that is equipped with the D'Olier Air Deflector.

MADE IN TWO SIZES

For 12-inch Guard. - $1.50 each

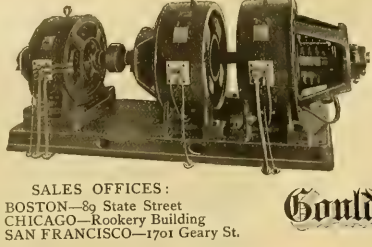
For 16-inch Guard. - $2.50 each

You can attach them to the Fan Guards with no trouble whatever. Simple. Neat. And last the life of the Fan. They keep the Air Circulating throughout the entire room.



WITHOUT

HENRY D'OLIER, JR., COMPANY, 119-121 South Eleventh Street, Philadelphia, Pa.



We have done no experimenting at the public's expense. The Gould Counter E. M. F. Regulating System was correct in the beginning and success has marked every installation.

Five years of severe test under service conditions has established the Gould Counter E. M. F. Regulating Booster as the most eminently successful Storage Battery Regulator on the market.

Suitable for either Direct or Alternating current regulation.

We invite the inquiries of those interested.

"Salesman's Bluff" of the "Lamp Organization"

You are buying Lamps now---maybe once you were a salesman---and if you ever sold goods you will appreciate how ridiculous is this semblance of "competition" (or "bluff" it should really be called) that is now being "put up" by the Lamp "Organization."

Six or eight salesmen---think of them all dining and wining the one lamp buyer! about to place a 10,000 lamp contract and all selling practically the same lamp (what does a label count for nowadays anyway) and at the same price!

Don't forget that it is you, "Mr. Lamp Buyer," that stands all this expense (at "16 to 18 cents per").

Why not buy your lamps from us and avoid helping to support the "Organization's" "red tape factory" and ridiculously high selling expenses?

St. Mary's Incandescent Lamp Company

KNOWLEDGE IS POWER

Let Us Help You To Learn More

An Excellent Opportunity to Obtain PRACTICAL Information on

ELECTRIC LIGHT PLANTS

THE pithy old adage, "Knowledge is Power," is so true as to be self-evident. We must know things to do things. For practical men, practical information is wanted. To supply this need constantly arising as new men enter the electrical field, the Western Electrician, beginning in its issue of July 7, 1906, the first of the new volume, will enter upon the publication of a valuable and notable series of articles (constituting, when finished, a complete treatise on the subject)

The Small Central Station

Practical Hints on Its Construction and Operation

The scope of this eminently practical work, written by experienced authorities on the subject, is well indicated by the list of chapter headings:

I. General Observations.
II. Building and Foundations.
III. Fuel and Waterpower.
IV. Boilers and Setting.
V. Operation of Boilers.
VI. Engines.
VII. Steam Turbines.
VIII. Belting and Shafting.
IX. Electrical Equipment—Generators—Switchboard.
X. Arc and Incandescent Lamps.
XI. Instruments.
XII. Transformers.
XIII. Line Construction.
XIV. Distribution.
XV. Cost of Plants.
XVI. General Data.

The articles supply data relating to small and medium-sized stations using overhead construction, and are especially adapted for intending purchasers of electric-light plants and practical men. Within this field the ground is thoroughly covered in view of the requirements of the best modern practice. Operations and construction are dealt with at length, and the information given has been compiled from the experiences reported by central station managers operating in all parts of the United States, handling various types and sizes of machinery. The series will be enriched with **numerous illustrations, diagrams and tables.**

These articles will be of much value to all readers of the Western Electrician, new and old, interested in the practical operation of electric-light plants.

REMEMBER that this noteworthy series on **Electric Light Plants** will begin in the Western Electrician of July 7, 1906, and run for from four to six months.

Coffee Percolators

for Morning Service

This electric heating device used in the morning will influence the introduction of others that will extend the service through the day.

Electric Coffee Percolator. Capacity 6 cups. Made of heavy copper highly polished and nickel plated.

Save Time

Coffee can be prepared in a few minutes.

Connection can be made to an ordinary lamp socket.

Easy to use and wash.

No Annoyance

No alcohol to spoil polished table tops.

No difficulty in controlling heat.

No flame.

Increase your day load by advocating Electric Heating Devices.

Order early and secure prompt shipments.

represents a clear profit for the central station. **C-W** machines are celebrated for their great overload capacity. Bulletin No. 53 T gives reasons.

CROCKER-WHEELER

COMPANY

AMPERE, NEW JERSEY

All Sorts of Schemes

have been suggested for stringing cables, but nothing found so good as our effective

SECURITY TROLLEYS

We find the best wheel for this purpose is malleable iron, yet the weight of our trolley is only twelve pounds. They stand exposure and abuse, and will not chip. Wood wheels, however, if you wish, at same price.

SECURITY TROLLEYS are made on scientific lines throughout, but are rugged, easily put up and taken down. Two men can pull a thousand feet of cable in ten minutes with ease after the trolleys are in place—a matter of half an hour.

A PRACTICAL BOOK FOR PRACTICAL MEN

"MODERN WIRING DIAGRAMS AND DESCRIPTIONS FOR ELECTRICAL WORKERS."

By Henry C. Horstmann and Victor H. Tousley. 160 pages, over 200 illustrations. Full leather binding, red edges. Pocket size 4 x 6. Price, net, $1.50.

A work that not only tells you how to do it, but shows you.

THIS BOOK tells how to wire for call and alarm bells. For burglar and fire alarm. How to run bells from dynamo current. How to install and manage batteries. How to test batteries. How to test circuits. How to wire for annunciators; for telegraph and gas lighting. It tells how to locate "trouble" and "ring out" circuits. It tells about meters and transformers. It contains 30 diagrams of electric lighting circuits alone. It explains dynamos and motors; alternating and direct current. It gives 10 diagrams of ground detectors alone. It gives "Compensator" and Storage Battery installation. It gives simple and explicit explanations of the "Wheatstone Bridge" and its uses as well as volt meter and other testing. It gives a new and simple wiring table, covering all voltages and all losses or distances, etc., etc.

507 Marquette Building, Chicago

A LIBRARY OF WELL SELECTED ELECTRICAL BOOKS

is of inestimable value to electricians. Such a library is best formed by occasional and carefully chosen purchases. ELECTRICIAN PUB. CO., 507 Marquette Building, Chicago.

SEALED PROPOSALS (three sets), indorsed "Proposals for Air Compressors," "Proposals for Power Plant" and "Proposals for Generating Sets," will be received at the Bureau of Yards and Docks, Navy Department, Washington, until 11 o'clock a. m., July 21st, 1906, and then and there publicly opened, for 2 air compressors and accessories, boilers and accessories, electrical equipment, pumps and piping, and 4 turbo-alternators, engines, generators, switchboard, wiring, etc., respectively, for the Navy Yard, Charleston, S. C. Plans and specifications can be seen at the Bureau, or will be furnished by the Commandant of the Navy Yard named. MORDECAI T. ENDICOTT, Chief of Bureau, May 31, 1906.

DEPARTMENT OF THE INTERIOR, Washington, D. C., June 4, 1906. Sealed proposals will be received at the office of the United States Reclamation Service, Williston, North Dakota, until 10 o'clock a. m., July 3, 1906, for the installation of steam and electric pumping plants, and electric generating and transmission apparatus, including three pumping stations containing centrifugal pumps of 20 and 30 cubic feet per second capacity under heads of from 30 to 50 feet, driven by steam engines and electric motors aggregating 1,200 horsepower; also two 300 K. W. steam turbine generating units, a 1,000-horsepower boiler plant, and accessories, the necessary buildings and 3-mile transmission line, located in the vicinity of Williston, N. D. Particulars may be obtained from the Chief Engineer, U. S. Reclamation Service, Washington, D. C., or from H. A. Storrs, Electrical Engineer, Williston, N. D. E. A. Hitchcock, Secretary.

ELECTRICIANS' HANDY-BOOK
OF USEFUL INFORMATION.
Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.
Compiled by E. T. BUBIER, 2d.
ILLUSTRATED.
A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART
1. History.
2. Theory.
3. Measurements. (Electric and Magnetic.)
4. Electric Batteries.
5. Electro-Chemistry and Metallurgy.
6. The Telegraph and Telephone.
7. Dynamos and Motors.
8. Management of Dynamos and Motors.

PART
9. Electric Lighting.
10. Transformers.
11. Wiring for Electric Power.
12. Wiring for Bell Fitting and Gas Lighting
13. Electric Railways.
14. Miscellaneous.
15. Useful Tables.
16. Logarithms.

Contains over four hundred and fifty pages and many illustrations.

IMPORTANT TELEPHONE BOOKS.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a reliable treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

AMERICAN TELEPHONE PRACTICE. By Kempster B. Miller, M. E. 510 pp. 380 illustrations. Price $3.00.
This is the first complete treatise on telephony in the English language. The text is profusely illustrated by cuts of commercial apparatus and carefully prepared diagrams of circuits. No diagram is given without a full explanation. The apparatus, circuits and methods of the American Bell Telephone Company and of the various independent companies are fully described. The appearance and methods used in making all of the tests required in commercial telephone work are fully treated.

THE INSPECTOR AND TROUBLE MAN. By A. E. Dobbs. 106 pp. Price $1.00.
A practical book, written in plain language. Full of information and diagrams for the operator, exchange manager, inspector, trouble man and lineman. A complete description of telephones, how to find and remedy their troubles, together with working plans for exchange construction, complete with diagrams of all up-to-date telephones and switchboards.

A, B, C, OF THE TELEPHONE. By J. E. Homans, A. M. 352 pp. 269 illustrations. Price $1.00.
Owing to the demand for a comprehensive book giving a clear, terse idea of the principles governing the construction, installation, care and management of telephones and their appliances, this book has been compiled. It has been the aim of the author to make this the most complete elementary book on the subject for the practical electrician, wireman, lineman and engineer, and it is written in a clear and careful style.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

PRACTICAL FEATURES OF TELEPHONE WORK. By A. E. Dobbs. 134 pp. Price 75 cents.
A simple, plain-speaking handbook for the practical telephone man.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Eighth edition. 16mo. 48 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Sixth edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pp. 333 illustrations. Price $4.50.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $1.25.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price, $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H Cary. 136 pp.; illustrated. Price $1.00.

WHAT'S WRONG

with that TELEPHONE INVESTMENT of yours?

Why doesn't it pay you as well as the best of your investments?

Is the reason bad management or bad equipment? More likely the latter.

Probably the company is trying to do a 20th Century business with 19th Century apparatus.

If that's the case, it is spending more and earning less than it might if it had our Automatic Telephone equipment.

This is the only really modern telephone system. It produces the ideal telephone service—quick, sure and secret—at half the operating expense of a manual equipment, and this service commands better rates.

It costs a fixed price per hundred lines to enlarge the automatic exchange, instead of an increased price per each hundred lines, as in the manual equipment.

The automatic exchange is never outgrown; it never has to be "scrapped" and replaced by a complete new one, as with the manual. You just add to it as you do to a sectional bookcase.

All these points bear upon the stability and value of your telephone securities. They mean dividends to you.

Over ninety per cent of all the large orders placed during the past few years, either for new installations or replacements, have been for our automatic system, and all the companies adopting it have, from the increased earnings, been able to pay the interest on their bonds and a good dividend on their stock.

Our Automatic system has been adopted in the following cities:

Aberdeen, S. D.
Akron, Ohio.
Albuquerque, N. M.
Allentown, Pa.
Auburn, Me.
Auburn, N. Y.
Battle Creek, Mich.
Bellingham, Wash.
Berlin, Germany.

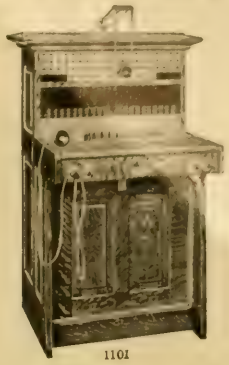
Organization Is the Forerunner of Success



1101

Private Exchange Switchboard

The Private Telephone Exchange is universally acknowledged to be one of the greatest organizers, time savers and money makers for a modern business house or institution.

Its extreme simplicity, efficiency and ease of operation recommend it to the consumer. There are no complicated parts to get out of order, its operation is quick and positive—all parts are easily accessible. These features appeal to the prospective customer.

Why not let Stromberg-Carlson supply your needs? Their knowledge, experience and skill are at your command.

KELLOGG MICHIGAN WHITE CEDAR POLES
SEND FOR POLE BOOK
The poles we handle are all carefully selected, and are the best grade of stock.
All shipments are prompt, subject only to car supply.
In addition to the several yards we have had in the past, we wish to call your attention to our new yard which is located at Escanaba, Mich.
The acquisition of this new yard enables us to ship poles by all railroads or by the lake routes, thereby enabling us to give the best delivered prices.
The location of our new yard makes it easier to secure cars, thus facilitating prompt shipment.
In many cases poles can be shipped by car-ferry, making possible a great saving in cases of shipment to Eastern points.
We are wholesalers exclusively, shipping in car lots only.
Write us for delivered prices.

ELECTRICITY SIMPLIFIED

By PROF. T. O'CONOR SLOANE

158 Pages. Fully Illustrated. PRICE, $1.00

Contents

CHAPTER I. The Ether; Electricity; Force and Energy; Mass and Weight. CHAPTER II. The Electric Charge; Potential; The Dielectric; Positive and Negative Electricity; Contact Action; Electrostatic Lines of Force; The Leyden Jar. CHAPTER III. The Electric Current and Circuit; Relations of Electromotive Force, Resistance and Current; Velocity of Electricity. CHAPTER IV. Fundamental Units and the Relations Between Electrostatic and Electromagnetic Units; Practical Units; the Volt, Ohm, Coulomb and Ampere; Electric Force, Work and Energy; Chemistry of the Curr. nt. CHAPTER V. The Magnetic Circuit and Electromagnetic Lines of Force; Magnet and Ampere's Theory. CHAPTER VI. Electromagnetic Induction and Action of Currents Upon Each Other; The Induction Coil and Its Application. CHAPTER VII. The Galvanic Battery; The Electrotype and the Locus of its Potential Difference; Polarization and Local Action; Different Examples of Batteries; The Arrangement and Action of Batteries; Storage Batteries. CHAPTER VIII. Dynamos; Motors; Transmission of Power. CHAPTER IX. The Telephone and Microphone; Electric Lighting; The Electric Telegraph; The Dangers of Electricity; Conditions for receiving a Fatal Shock.

Sixteenth Edition. Just Published.

ARITHMETIC of ELECTRICITY

By PROF. T. O'CONOR SLOANE

165 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Ohm's Law CHAPTER III. Resistance and Conductance. CHAPTER IV. Potential Difference. CHAPTER V. Circular Mills. CHAPTER VI. Special Systems. CHAPTER VII. Work and Energy. CHAPTER VIII. Batteries. CHAPTER IX. Electro-Magnets, Dynamos and Motors. CHAPTER X. Demonstration of Rules. CHAPTER XI. Notation in Power of Ten. Tables.

Standard Electrical Dictionary

By PROF. T. O'CONOR SLOANE

682 Pages. 393 Illustrations. PRICE, $3.00

An Entirely New Edition, Brought Up To Date and Greatly Enlarged. Complete—Concise—Convenient.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in anyway interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

Fifteenth Edition. Just Published.

ELECTRIC TOY MAKING

DYNAMO BUILDING and ELECTRIC MOTOR CONSTRUCTION

By PROF. T. O'CONOR SLOANE

185 Pages. Very Fully Illustrated. PRICE, $1.00.

Contents

CHAPTER I. Batteries. CHAPTER II. Permanent Magnets. CHAPTER III. Electro-Magnets. CHAPTER IV. Electric Motors. CHAPTER V. Electric Bells. CHAPTER VI. Miscellaneous Toys. CHAPTER VII. Spark and Induction Coils, and Allied Subjects. CHAPTER VIII. Hand-Power Dynamo. CHAPTER IX. Miscellaneous Receipts and Formulæ.

Twelfth Edition. Just Published.

How to Become a Successful ELECTRICIAN

By PROF. T. O'CONOR SLOANE

200 Pages. Illustrated. PRICE, $1.00

Contents

CHAPTER I. Introductory. CHAPTER II. Mathematics. CHAPTER III. Physics. CHAPTER IV. Chemistry. CHAPTER V. Electricity at Home. CHAPTER VI. Mechanical Engineering. CHAPTER VII. Drawing. CHAPTER VIII. Teachers. CHAPTER IX. Electrical Factory Work for Students. CHAPTER X. College Education. CHAPTER XI. Steam Engineering CHAPTER XII. The Manufacturing Engineer. CHAPTER XIII. The Constructing Engineer. CHAPTER XIV. The Station Engineer. CHAPTER XV. Inventing. CHAPTER XVI. Original Investigation. CHAPTER XVII Success. CHAPTER XVIII. Reading. CHAPTER XIX. Ethics.

The How and Why of Electricity

By CHARLES TRIPLER CHILD

Second Edition, Revised and Enlarged **Price $1.00, Postage Prepaid**

WHILE the added matter has brought the volume up to date in every phase of this study, the original text, as prepared by its brilliant author, remains to entrance the reader. New illustrations have been made where it was deemed possible to further illuminate the explanatory matter. The book contains no mathematics. The phenomena of electricity are treated in splendidly arranged word pictures, and the engineer, the student and the non-technical reader, alike, may be benefited and entertained by this book.

CONTENTS

CHAPTER
Preface
I The Electric Current
II The Electric Battery
III The Effects of Electric Flow in the Circuit—Heat and Chemical Action
IV The Effects of Electric Flow Outside the Circuit—Magnetism and Induction—The Electrical Units
V Electromagnets—The Telegraph
VI Electric Signaling Apparatus
VII The Relations Between Magnets and Electric Currents
VIII Induction and Reactive Coils
IX The Telephone
X Telephone Accessories
XI The Mechanical Generation of Electricity
XII The Dynamo Machine
XIII Various Types of Dynamo Machines
XIV Alternators—Polyphase Currents
XV The Electric Motor
XVI The Electric Railway
XVII Polyphase Currents and Motors
XVIII Electrical Power Transmission
XIX The Incandescent Light
XX The Arc Light
XXI Electrochemistry—Storage Batteries
XXII Wireless Telegraphy
XXIII Radiation—X-Rays
XXIV Recent Theories

Beware of Imitations

For the protection of our customers we advise that **Klein's Pliers** are being imitated. To look like Klein's, however, does not make them Klein's.

CAUTION

Look for this stamp, **M. Klein & Sons,** on the inside of handles—none are genuine without this stamp.

Use only genuine Klein's. They are the product of years of experience and have stood the test of time. Send 2-cent stamp for catalogue, so as to have it on file.

MATHIAS KLEIN & SONS

81 W. Van Buren Street — CHICAGO, ILLINOIS
